BASIS FOR SCHEDULED REPAYMENT OF COMMERCIAL POWER INVESTMENT IN THE COLUMBIA RIVER POWER SYSTEM

The Bonneville Power Administration has the responsibility of fixing commercial power rates at a level which will, over a number of years consistent with the requirements of law, insure repayment of the investment in commercial and the investment in related irrigation activities assigned for repayment from commercial power revenues. Repayment requirements for the Columbia River Power System are found in the varying provisions of the several acts authorizing construction and in the administrative interpretations thereof. Accordingly, system power rates reflect a composite of the requirements of these acts applied to the individual projects and the administration. An allocation of system power receipts among the generating projects and the administration, designed to satisfy their respective requirements, is made annually pursuant to agreements reached by the Administration with the Corps of Engineers and the Bureau of Reclamation.

Schedule 2 is intended to compare, at this interim date, the repayment of Federal investment in commercial power achieved by current power rate levels with the scheduled repayment established by law or administrative policy pursuant to law. Power receipts returned to the Treasury have been first applied to the repayment of operation and maintenance and interest expenses, with the remainder being applied to amortization of the capital investment in commercial power. In projects in which part of the irrigation investment is assigned for repayment from commercial power revenues, the assistance is assumed to begin after repayment of the commercial power investment. Commercial power rate and repayment requirements are affected by irrigation assistance to the extent that the assistance makes necessary the recovery of commercial power investment in a shorter period of years.

The rate and repayment requirements established by law or administrative policy pursuant to law for the individual projects and the Administration are as follows:

Bonneville Dam project, Bonneville Power Administration, and McNary Dam project: The Bonneville Project Act provides that rate schedules shall be drawn having regard to the recovery of the cost of producing and transmitting electric energy excess to project needs, including the amortization of the capital investment over a reasonable period of years. This provision of the Bonneville Project Act was also applied to McNary Dam project by the authorizing legislation.

In determining the rate and repayment requirements for the Bonneville Dam project, the Bonneville Power Administration, and the McNary Dam project, interest at a rate of 2.5 percent on investment has been included as a part of the cost of producing and transmitting electric energy. The amortization of the capital investment over a reasonable number of years has been administratively determined to be the recovery, during the periods of their respective service lives, of the original cost of the power facilities having lives of less than 50 years, and the amortization of the remainder of the capital investment in power facilities over a period of 50 years subsequent to the in-service date of such facilities.

Albeni Falls, Detroit-Big Cliff, Lookout Point-Dexter, and Chief Joseph projects: Rate and repayment requirements for these projects are governed by section 5 of the Flood Control Act of 1944. The provisions of this section are similar to the corresponding provisions of the Bonneville Project Act and state that rate schedules shall be drawn having regard to the recovery of the cost of producing and transmitting electric energy excess to project needs, including the amortization of the capital investment over a reasonable period of years. The act of July 27, 1954 (68 Stat. 568), authorized the Secretary of the Interior to construct irrigation facilities comprising the Foster Creek division of the Chief Joseph project under reclamation law and provided that surplus power revenues should be used to assist in repayment of the irrigation investment.

Rate and repayment requirements for these projects have been determined by Bonneville Power Administration in the same manner as for Bonneville Dam project, McNary Dam project, and the Administration. It has been assumed in the preparation of schedule 2 that the assistance to irrigation investment in the Foster Creek division of the Chief Joseph project will not be required until after repayment of the project commercial power investment.

Hungry Horse project: Construction of Hungry Horse Dam and Reservoir was authorized by the act of June 5, 1944 (43 U. S. C. 593a). The act made no provision for allocations of cost, rate and repayment criteria, or the application of revenues. There has been a question as to whether the Hungry Horse project is subject to the requirements of reclamation laws, including the rate and repayment requirements of section 9 of the Reclamation Project Act of 1939. The Department of the Interior has this matter under consideration.

Rate and repayment requirements for this project have been determined in the same manner as for Bonneville Dam project and other projects of the Corps of Engineers.

Columbia Basin project: Reclamation law, as supplemented, and Executive Order 8526 require that payments be made into the reclamation fund of the United States Treasury, for the account of Columbia Basin project, of such revenues received by Bonneville Power Administration from the sale of electric energy as may be properly allocable to the project. By agreement between Bonneville Power Administration and the Bureau of Reclamation, entered into to effect these requirements, the Administration is making payments which will, together with revenues from other sources credited to power, over a period of 80 years equal:

1. Operation, maintenance, and replacement of facilities allocated to commercial power.

2. Interest at 3 percent on unamortized investment in facilities allocated to commercial power.

3. Investment in commercial power facilities.

4. Assistance to irrigators in repaying the investment in irrigation estimated to require about $470 million.

The rate and repayment study by the Bureau of Reclamation indicates that commercial power investment will be repaid in about 33 years (1975) and that net power revenues after that date will render the assistance necessary to repay the irrigation investment over the remaining 47 years of the project payout period. Inasmuch as the annual payments by Bonneville Power Administration are incorporated in the rate and repayment study itself, repayment at Columbia Basin project is considered to be just on schedule.

Yakima project (Kennewick division): Rate and repayment requirements for the Kennewick division of the Yakima project are governed by the Reclamation Project Act of 1939 and the authorizing act of June 21, 1948 (62 Stat. 382). The latter act provides an overall payout period of 66 years for the reimbursable investment in power and irrigation, with power revenue assistance to irrigators in repayment of the irrigation investment. It provides also for a 2.5 percent return on the investment in commercial power and authorizes the use of one-fifth of such interest to assist in repayment of the irrigation investment.

Repayment of investment in commercial power is expected to require 38 years, and net revenues after that date are to render the assistance necessary to repay the irrigation investment (about $4,500,000) over the remaining 28 years of the project payout period. Inasmuch as the annual payments by Bonneville Power Administration are incorporated in the rate and repayment study itself, repayment is considered to be just on schedule.

Resolution Favoring Change in Social-Security Laws

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent that a joint resolution passed by the Illinois House of Rep-

resentatives and Senate be printed in the Appendix of the RECORD. This favors a change in the social-security laws with respect to the definition of children, so that children of common-law marriages may be permitted to obtain survivorship benefits under that act.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

House Joint Resolution 29

Whereas the Social Security Act so defines the term "children" that in Illinois and many other States which do not recognize the validity of common-law marriages, social-security survivorship benefits are denied to children of a deceased father, who is a party to a common-law marriage, although it can be established that the father had lived with the children, supported them, acknowledged parentage on birth certificates, claimed them for income-tax purposes, and in other ways formally and informally acknowledged paternity of such children; and

Whereas there is a substantial number of these children in this and other States who are being deprived of benefits to which they should be entitled; and

Whereas in many cases the public aid and assistance agencies of the State must provide and care for these children at a cost to the States of millions of dollars; and

Whereas the definition of "children" in the Social Security Act should be so amended as to prevent further injustice and financial loss to these children, to enable them to receive the social-security survivorship benefits to which they are entitled and to relieve part of the financial burden which has been placed on this and other States: Therefore be it

Resolved by the House of Representatives of the 70th General Assembly of the State of Illinois (the Senate concurring herein), That this general assembly respectfully request the Senate and House of Representatives of the United States to enact legislation which will redefine the definition of "children" in the Social Security Act so that children of common-law marriages may be permitted to obtain survivorship benefits under the Social Security Act upon the death of the father of such children; and, be it further

Resolved, That a suitable copy of this preamble and resolution be forwarded by the secretary of state to every Member of the United States Senate and House of Representatives from Illinois.

Adopted by the house, June 4, 1957.

WARREN L. WOOD,
Speaker, House of Representatives.
FRED W. RUEGG,
Clerk, House of Representatives.

Concurred in by the senate, June 19, 1957.

JOHN WM. CHAPMAN,
President of the Senate.
EDWARD E. FERNANDES,
Secretary of the Senate.

Report to Constituents on Work of the 85th Congress

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. MILLER of Nebraska. Mr. Speaker, it has been my practice for the 15 years I have been a Member of Congress to make a yearly report to the people I represent. I want them to know how I voted and to have my views on all public questions. It is their right and it is my responsibility.

NEWSPAPER AND RADIO REPORT EACH WEEK

In my humble opinion, it is the duty of every Member of Congress to keep in close touch with the people that he represents, to know their wishes and keep them informed of pending legislation. I have tried to do this each year by writing a weekly newsletter which goes to approximately 90 newspapers and 14 radio stations, and a number of interested individuals in the district.

I tape a weekly radio program entitled "What's Happening in the Nation's Capital." This program has been carried over the years by all of the radio stations in the district. There has been an occasional TV film. The newspapers and radio and TV stations have been most kind to use these efforts of mine as a public service. I deeply appreciate their help in bringing these reports to the people.

VISIT TO 38 COUNTIES AND 100 TOWNS IN THE DISTRICT

I make it a practice when Congress is in session to stay here on the job. In doing so I have missed out on many invitations to attend various meetings in Nebraska. By staying on the job I have kept one of the best voting records in Congress, in the upper 5 percent.

When Congress is not in session, I make it a practice to be out in the District talking with people at county fairs, service clubs, church groups, farm meetings, and similar gatherings.

In off-election years I hold Government clinics in each of the 38 courthouses for the purpose of discussing problems of Government with my constituents.

LEADERSHIP BY CONGRESS AND THE PRESIDENT

This Nation is entering the fifth year of a world at peace, a period that began with the ending of the Korean war in 1953. It seems to me that we have progressed, day by day, to a more permanent, enduring, and solid structure for conducting our world affairs. It is to be hoped that the disarmament conference will bear good fruits.

This Nation and the world have advanced far in the production of death-dealing weapons. The guided missile is about to take the place of the airplane. The atomic age has burst upon us and if used properly could promise a better world with better living conditions.

The budget has been balanced for the third straight time. Deficit spending has become a thing of the past. Corruption in Government has been held at a minimum. The Communists no longer hold positions of responsibility. Our leadership in world affairs has been firmed. This Nation no longer jumps from crisis to crisis. We have demonstrated a sincere desire for peace by positive, constructive acts and deeds. We can be thankful we do live in a world of peace. Tense though it may be, it has given us a prayerful respite from the slaughter and destruction of two major wars.

If this Nation continues to enjoy wise political, economic, and spiritual leadership, we can rise to new heights of position and power in this world.

BUDGET

One of the greatest roars of protest in the history of the Nation began to batter at the ears of Congress after the President announced his budget for the 1958 fiscal year. It was the largest peacetime budget in history.

I wrote the President and made a protest about the enormous budget and the growth of Federal Government. I pointed out that with proper management we could cut $8 to $10 billion from the budget without injuring a single vital, necessary function of government. I suggested:

First. Adopt all of the Hoover Commission recommendations.

Second. Cut down on foreign economic aid.

Third. Trim the payroll by 10 percent. Stop hiring to fill vacancies.

Fourth. Stop new matching and grant-in-aid programs.

The administration did adopt some of the suggestions and it looks like there will be a savings of around $5 billion of the original proposed budget of $71.8 billion.

I have had hundreds of letters from Nebraska protesting the budget. They were indignant letters. They were detailed and sound in their reasoning. I am mighty glad of the response.

I consider myself a conservative-moderate Republican. I believe in spending when the money goes for the current and future needs of a growing American economy.

I have not been able to go along with the administration on Federal aid to education, increased spending for foreign aid, and additional spending for new welfare programs. I cannot and will not be a rubber stamp.

SCHOOL CONSTRUCTION

For several years I have announced my opposition to Federal aid to education. I have worked and voted against such aid. I have done so because I believe these problems should be left to the people in the local communities. I want no big government in Washington controlling our county and State school systems. As a former teacher in a rural school, it is my conviction that communities should build, operate, and maintain their schools at the local level and without Federal interference.

FOREIGN AID

In the past 10 years, the American taxpayer has been called upon to send more than $65 billion to some 70 countries around the world. I have long been opposed to foreign aid with the exception of food, medicine, clothing, and technical help for needy people. It seems to me we have wasted billions of dollars in the past few years trying to buy friends that cannot be bought. I voted against foreign aid.

HELLS CANYON

Of course, you heard the rumbling over the Hells Canyon issue. Here was a case where proponents of Federal power wanted to spend half a billion dollars of Federal money to construct a high dam over the Snake River out in the North-

west at the very same place where a private power company is already building a series of three dams to accomplish the very same purpose.

The private company has spent about $58 million. The Federal power people wanted to bury this construction and start over. As a matter of fact the production of power would be nearly the same, whichever plan was used.

Nebraska's public power is entirely different from Federal power. We elect our own directors; our electric energy is not controlled from Washington. We do have good local control. I have supported 93 percent of public-power projects in other States.

At the same time I am a firm believer in the free enterprise on which this Nation was founded. It is my steadfast conviction that the Government should not do for the people what the people are able to do for themselves.

There is room in our country for both private and public power—it should not become a political football.

SUPREME COURT

Decisions made by the Supreme Court during the past year have been very disturbing to me. Of course, the one which hit the Nation with the greatest impact was the Girard case, the young soldier who was turned over for trial to the Japanese after he killed a woman.

The case drew a lot of protest. Few tried to argue that Girard was innocent but all demanded that he be tried by an American court-martial. The status-of-forces agreements came in for a great deal of criticism. I am sure some more effective legislation is needed than we have now.

The Supreme Court also freed a confessed rapist on the technical ground that he had been held too long before arraignment. This man walks the streets of Washington today. There were other cases where Communists were turned loose on technical grounds.

Perhaps the worst of all was in the case where the Court in effect opened up the secret files of the FBI and thus weakened the powers of law enforcement. Some corrective legislation was passed in the final days of the session.

IRRIGATION AND FLOOD CONTROL

We had a severe setback this past session when the Ainsworth and Farwell irrigation districts were denied starting funds. Recognized as two of the best projects in the Missouri River Basin, the projects were denied because of a poor presentation of the facts by the Department of the Interior and the fact that the Nebraska Legislature had passed a misinterpreted resolution against grants-in-aid projects.

These latter projects have no relation to irrigation or reclamation, but opponents made hay with the resolution.

The Democratic leadership effectively prevented the omnibus rivers and harbors bill from coming to the floor. The Gering Valley flood-control project was a valued item in this bill, but too many unsound, unauthorized projects had been included. We tried hard to get a clean bill introduced, leaving out the unapproved items. The leadership prevented this. Of course, we will try again next year.

Sufficient funds were granted this year by Congress for the completion of the Sargent Irrigation District. Funds also were approved for the completion of Glendo Dam, which will provide more power for Nebraska, Wyoming, and Colorado. We were successful in getting adjusted contracts for the Northport Irrigation District and the Mirage Flats Irrigation District.

The 230-kilovolt line from Fort Randall to Grand Island is still an uncertainty. The Appropriations Committee refused to consider it. I believe we would be better off if the power interests in Nebraska joined together, borrowed the money from REA, and built it themselves. Three years ago we could have had the line, but at that time some of the power interests were against it. They thought a 115-kilovolt line would do the job. They refused to look into the future.

FARM PROGRAM

The farm program is in somewhat of a mess. There are many differences between the cotton, tobacco, wheat, and corn farmers and the individuals living in the city.

The best news for Nebraska, however, is that the drought seems to have been broken. There was a good small-grain crop, the best hay and alfalfa crop we have ever had. It is good news to know that the price of hogs and cattle is satisfactory. In general, over the Nation agriculture seems in a better position than it was a year ago. The farm income is up 7 percent in the last year. New discoveries in better feeds, better fertilizer, and better farming methods have helped cure an agriculture that had been quite sick.

Next year I hope there is good sound farm legislation. I believe that discoveries can be made that will find ways and means of using surplus agriculture products for industrial uses. The Commission inquiring into further industrial uses of grains and other farm crops has made its report, which calls for more research in finding new methods of using surplus crops. I feel sure that American scientists will discover these new methods that will tie industry and agriculture closer together.

PEACE AND TAXES

The world has been at peace, I think, partly because we have spent a great deal of money in a sound defense program. Of course, this has caused taxes to remain high. About two-thirds of the tax dollar goes to maintain the peace and to pay for past wars. Recent military manpower cuts indicate a speeding up as we change to more modern methods of war. The national defense is being streamlined to meet the requirements of the nuclear age.

CIVIL RIGHTS

The civil-rights issue occasioned many days of debate in the Senate. This is the question of protecting the Negro and his voting rights. It seems to me that in the last discussion there was more politics than there should have been. The issue has little effect in Nebraska. I supported the administration for a good bill which, in revised form, went to the White House after the Senate's one-man filibuster ended.

THE PRESIDENT AND CONGRESS

This Congress has proved one of the most frustrating, difficult, and inconclusive that I can remember in my 15 years as a Member of the House of Representatives.

The Congress has been more productive of political maneuvering than of constructive legislation. There has been much partisan bickering. There has been too much logrolling and vote trading.

The vacillation comes about because of the different political complexions of the President and the Congress. When the Chief Executive is of one political complexion and the Congress another, legislation becomes extremely difficult. There have been too many roadblocks thrown in front of good legislation.

The President has shown restraint in dealing with Congress. There are times when he seems to have had poor advice.

The President said he was bitterly disappointed with the results of this Congress. He made some 203 recommendations but less than half of them were approved.

It seems to me that in all legislation there is some good and some bad. I have often wished it were possible to vote for the 70 percent that might be good and reject the balance in any bill. That is not possible.

I have always felt that legislation should be considered on its merits. I have supported those measures which I thought were right. If my conscience told me a measure was wrong, I have withheld my support.

Many controversial bills which should have come to the floor at this session were bypassed by the Democrat-controlled Congress and will have to wait until next year for action. I am not satisfied with the record we made. I believe we could have done better with a Republican President and a Republican Congress.

It has been a great privilege and a great responsibility to represent the people who live in the Fourth District for with every privilege comes responsibility.

As long as I am a Member of Congress I shall try to discharge my responsibility to the very best of my ability.

Federal Expenditures in Montana

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. MANSFIELD. Mr. President, economy was the theme of the 1st session of the 85th Congress and the budget submitted to Congress by President Eisenhower for the operation of the Federal Government in fiscal year 1958 was

reduced by nearly $5 billion in funds appropriated by Congress.

However, estimated Federal spending in Montana was increased by an additional $11,197,134 for fiscal year 1958. Appropriations totaling $220,909,849 have been programed for Montana for the 12-month period which began on July 1 of this year. In fiscal year 1957 the Federal Government spent $209,712,715 in Montana. These annual appropriations continue to be the largest single source of income to the State.

Federal income and excise taxes collected in Montana for fiscal year 1956 was in the amount of $128,991,000. On the basis of the above figures Federal expenditures in the State will be at the rate of approximately $1.71 for every $1 collected in Montana.

The Agriculture Department contributed the most to the State and the Commerce Department and the Defense Department are the next two largest sources of Federal monies.

These appropriations do not include public works projects such as Helena Valley, the second powerplant at Fort Peck and others as portions of these are repayable.

It was a distinct pleasure to work with Senator JAMES E. MURRAY, Congressmen LEE METCALF, and LEROY ANDERSON. We worked together—held periodic conferences—in connection with all matters affecting Montana's welfare and endeavored at all times to work as a unit in furthering the development and best interests of our State.

I ask unanimous consent to include in the Appendix of the RECORD a table of the major Federal departments and agencies who programed funds in Montana.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Federal expenditures in State of Montana by departments

Departments	Fiscal year 1957	Fiscal year 1958	Increase (+) or decrease (−)
Commerce: Census Bureau, Weather Bureau, Coast and Geodetic Survey, Bureau of Public Roads, Civil Aeronautics Administration	$35,505,173	$44,194,235	+$8,689,062
(Highway program)	(31,915,857)	(40,297,442)	(+8,381,585)
Treasury: Bureau of Customs, Internal Revenue and Savings Bonds Division	1,169,405	1,234,896	+65,491
Labor: Bureau of Labor Statistics, Wage and Hour Division, employees compensation, apprenticeship and training, employment security	2,024,771	2,008,674	−16,097
Post Office	7,840,000	8,133,000	+293,000
Justice: Legal activities, Immigration and Naturalization Service	557,647	645,000	+87,353
General Services Administration: Government buildings and services, minerals purchase programs	6,887,060	7,212,516	+325,456
Veterans' Administration: General administration, medical and hospital services, benefit payments	14,634,166	14,634,166	
Defense: Departments of the Army, Navy, and Air Force	32,260,000	31,854,000	−406,000
Interior: Bonneville Power Administration, Bureau of Land Management, Bureau of Indian Affairs, Bureau of Reclamation, Geological Survey, Bureau of Mines, National Park Service, Bureau of Sport Fisheries and Wildlife	$14,480,392	$17,971,256	$+3,490,864
Health, Education, and Welfare: American Printing House for the Blind, Office of Education, Vocational Rehabilitation, Public Health Service, and Social Security Administration	8,961,571	9,704,805	+843,234
Agriculture: Agricultural Research Service, Extension Service, Forest Service, Soil Conservation Service, Conservation Program Service, Marketing Service,[1] soil-bank program, Commodity Stabilization Service, Commodity Credit Corporation, Federal Crop Insurance Corporation,[2] REA, FHA, Office of General Counsel	85,492,530	83,317,301	−2,175,229
Total	209,712,715	220,909,849	+11,197,134

[1] Since it is not practicable to estimate in advance the availability or demand for surplus commodities, the estimate for 1958 is not included.

[2] Since it is not practicable to estimate the amount of crop insurance indemnity payments in advance an estimate for 1958 is not included. Estimate premium income is as follows: 1957, $1,429,511; 1958, $1,500,000.

The Recent June Decisions of the Supreme Court

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 18, 1957

Mr. SMITH of Kansas. Mr. Speaker, the recent June decisions of the Supreme Court have caused more comment among all groups of Americans than any other decisions of the Court within the last 50 years.

The hurricane of protests is not confined to just people in right-wing groups, nor to those citizens who write letters to the editor. Neither is this indignation confined to the speeches of—as the liberal press likes to say—hotheaded rural Congressmen, but to bar associations, judicial councils, Federal judges and 3,000 members of the American Bar assembled in London, who all speak out openly against these June decisions.

What is the basic cause of all this alarm regarding these decisions? In the opinion of most observers, this outcry is caused by the well-founded belief that for many long years the Congress—and for the last 5 years the Presidency—has been pointing out the necessity of passing laws to curb the inroads of communism at home and to build roadblocks against communism all over the world with United States tax dollars.

This expressed attitude by the Congress and the Presidency can now well be destroyed by these recent decisions.

It is an obvious fact that any government exists to protect the well-being of its whole society. It seems highly significant that our country which has spent billions upon billions within the last 8 years fighting international communism throughout the world and now by these decisions to be told by this Warren Court that communism is no present danger.

Something seems to have happened to the thinking of this Court, because just a few years ago in a Supreme Court decision we find these words: "It"—communism—"is a clear and present danger."

That was the sentiment expressed with regard to the theft of bomb secrets.

It is now frequently asked, "What does the Court mean? If the Communists can destroy nations by subversion and infiltration, why maintain and spend untold billions for military defense?"

I am sure that even the man in the street, far removed from the semantics of legal phrases, full well knows that if our Government goes down he will have nothing to hope for from the communistic system that will take its place. The average American believes that self-preservation should be the first duty of this Government. He does not expect his Government to be so virtuous about theoretical citizens' rights that he, Mr. Average American, will become a mere number in a slave camp or just a corpse.

And, above all else, Mr. Average American is not so naive as to believe that communism is just another shade of political opinion.

There is another belief held by most American citizens which is simply this: The Supreme Court should be just as anxious to protect the Nation itself as to the theoretical rights of Communists who have openly avowed their belief in the forceful overthrow of our Government.

Most of the criticism now directed at the Supreme Court is not at the third branch of our Government, but at the individuals on this bench. Most Americans believe that these men who write decisions on the Supreme Court should not be swayed by pressure groups.

Most assuredly, most citizens did not approve of the Supreme Court Justices going to New York City to testify as to the "sterling and unimpeachable character" of Alger Hiss, who was convicted for perjury for denying he turned over stolen documents to Communist agents.

It might also be well to remember that Alger Hiss in his early years was one of these bright young law clerks who help Justices of the Supreme Court in writing decisions.

I am sure it was never intended by the founders of our Government that political expedient politicians should be ap-

pointed to the Court instead of men well founded in the law. When mere political expediency creeps into decisions, the whole governmental structure is in danger. These recent Warren Court decisions seem to all point to the fact that anyone whose loyalty to the United States is questioned always receives a favorable decision.

These June decisions on communism were particularly denunciatory of the Committee on Un-American Activities and its investigations. The Court found fault with the resolution creating the Committee on Un-American Activities in 1938.

Here is a copy of the resolution of Congress creating the committee:

The Committee on Un-American Activities, as a whole or by subcommittee, is authorized to make from time to time investigations of (I) the extent, character, and objects of un-American propoganda activities in the United States; (II) the diffusion within the United States of subversive and un-American propaganda that is instigated from foreign countries or of a domestic origin and attacks the principle of the form of government as guaranteed by our Constitution; and (III) all other questions in relation thereto that would aid Congress in any necessary remedial legislation.

Read it again. Do you have difficulty in determining what this committee was authorized to do or to investigate?

The intent seems to be plain to most citizens, but not the Supreme Court.

Here is what they said in one of their recent decisions:

It would be difficult to imagine a less explicit authorizing resolution. Who can define the meaning of un-American?

What is the basic form of government as guaranteed by our Constitution? It would seem that someone on the Court has failed to remember section 4 of article 4, a provision in the Constitution which says:

The United States shall guarantee to every State in this Union a republican form of government and shall protect each of them against invasion * * * and against domestic violence.

The Court apparently does not recognize the dangers of infiltration, sabotage, the designs of fellow travelers, or the complexities of a modern society. This decision seems to point out that only when armed resistance breaks out would the States or the Federal Government be justified in protecting themselves from the Communist menace that everyone seems to be aware of except the Warren Court.

This decision to me points out most convincingly that the rights of the Congress, the Executive, and the States have been usurped by the Court.

It is all very well to say, "Oh, yes, Congress has the right to investigate for purposes of writing legislation." But the words are a bit hollow sounding in view of the Supreme Court's repeated decisions of communism.

It is all very well for Chief Justice Warren to write about academic freedom and political expression in the classrooms as he did in the Sweezy case, but it is difficult for some to see the difference between a professor lecturing his students on the benefits of communism and another professor's teaching his students the art of secret writing and making microfilm and how to set fires secretly. The basic design in both is to destroy our form of government.

But of course, these new guardians of Communist liberties might see a difference, but it is doubtful.

It will be somewhat difficult for future historians to find the basic reason why the judicial branch of our Government became the chief foe of the anti-Communists in America. To date, these anti-Communist foes, through their decisions, seem to be in the ascendancy; namely, Warren, Frankfurter, Black, and Douglas.

Running through many of these comments on the June decisions is this one question: "Who writes these opinions?"

In the U. S. News & World Report, July 12, 1957, is an article entitled "The Bright Young Men Behind the Bench." This article infers that these law clerks freshly arrived from law schools are influential in the opinions expressed.

Before we start condemning and blaming the faceless and almost nameless clerks, let us examine some records and recall from our memories a few well-known facts. It seems strange that memories can be so short.

Who is the most powerful man on the Court? It is Earl Warren, because he is the Chief Justice. He can wield terrific power, if he so desires.

From the intellectual aspect, many would say Felix Frankfurter holds the reins of power. All informed persons know of Frankfurter's background, training, ancestry, and close associates. One only has to read his decisions since he has been a member of the Court to see through the semantic smokescreen of his judicial decisions.

In looking into the background and writings of Felix Frankfurter, we sometimes find strange words that seemed a bit puzzling at the time they were written.

The Justice said this:

If facts are changing, law cannot be static. So-called immutable principles must accommodate themselves to the facts of life, for facts are stubborn and will not yield. In truth, what are now deemed immutable principles once themselves grew out of living conditions. (Law and Politics.)

Does that mean, since we have long since passed out of an agricultural economy into an industrial one, that we must now adopt socialistic-communistic principles?

Here are some more direct words written by Justice Frankfurter:

The history of the Supreme Court is not the history of an abstraction, but the analysis of individuals acting as a court who make decisions and lay down doctrines * * * and sometimes even overrule the decisions of their predecessors, reinterpreting and transmitting their doctrines. (Law and Politics.)

Did the famous liberal Justice have the present decisions in mind when he wrote the foregoing?

Justice Hugo Black, whose court experience was only as a police judge in an obscure village in Alabama. His decisions reveal through the years no sign of any approach to a basic American problem except that "We can't hunt witches or burn books." He has lived peacefully, bouncing back and forth from one side to the other.

Justice Black on several occasions in the past has upheld the right of congressional committees to investigate all corporate practices and was severe in his comments that corporations had no right of secrecy nor could they withhold necessary information from a congressional committee.

Listen to him rave at a corporation:

There is no power on earth that can tear away the veil behind which powerful and audacious and unscrupulous groups operate, save the sovereign legislative power armed with the right of subpena and search.

A great many people will wonder why the Justice from Alabama will not see any dangers from Moscow's agents and that none of them are powerful, audacious, unscrupulous in their attempt to infiltrate schools, homes, churches, and factories of America with but one ultimate objective in mind—destroy America.

Justice Brennan has no long record on the bench, but before coming to the Supreme Court he was no Judge Medina in his approach to this country's gravest world problem, namely communism.

William O. Douglas, the climber of Asiatic peaks in far-off lands, has never been noted for climbing any American peaks of lofty ideals. He has just been going along for the ride, except for "occasional bird walks on obscure trails." He is a westerner who succumbed very easily to the "taints and tarnish" of the international aspect of all domestic problems.

Let us take a little look into the background of the Chief Justice, Earl Warren. There are perhaps quite a number of people who over the past years have heard Earl Warren say, "We have nothing to fear from communism."

The chief source of Warren's so-called influence is that he assigns the cases to the various justices for the writing of the opinions. It is apparent that the man who writes the opinion makes a lot of difference, because the reasoning behind the decision in many cases is important as the decision itself. It is well to remember also that Warren assigned himself to write the sociological opinion in the school case in 1954, and in some of the recent Communist cases, Warren wrote the opinion.

Communists and socialists have long recognized socialized medicine as the first step in organizing a totalitarian state. Warren in California always worked for and advocated socialized medicine.

He and CIO bosses and Harry Bridges advocated socialized medicine and Warren in California always advocated an FEPC law.

In 1944 Warren helped Harry Bridges and other CIO leaders defeat a right-to-work law in California. This law would have freed the unions from the despotic rule of labor racketeers.

Warren was against the ruling of the board of regents in California requiring loyalty oaths for professors.

It is reported at the 1950 governors' conference, at which Dean Acheson

spoke, only Governor Warren praised Dean Acheson's speech.

During the campaign of 1948, both Time and Newsweek reported that Warren had asked the national campaign managers to soft pedal the issue on communism.

And always remember, the Chief Justice of the Supreme Court, as Governor of California, twice tried unsuccessfully to put over socialized medicine in California.

Justice Holmes once wrote in an opinion:

> The life of the law is not logic but experience.

It is to be hoped that the good Chief Justice will listen to those words and remember law and precedent are fundamental if we are to survive as a Nation.

The Watkins case was one of those decided in the recent so-called June decisions:

> We must condemn the practice of imputing a sinister meaning to the exercise of a person's constitutional rights under the fifth amendment * * *. The privilege against self-incrimination would be reduced to hollow mockry if its exercise could be taken as equivalent either to a confession of guilt or a conclusive assumption of perjury.

Yet let us look back a few years in the Supreme Court decision with regard to the Teapot Dome scandal. This decision is quite different, the Court said:

> Men with honest motives and purposes do not remain silent when their honor is assailed. * * * These gentlemen have the right to remain silent * * * but a court of equity has the right to draw reasonable and proper inferences in the case.

That clearly represents a changed view of the Court. When some barrels of oil were involved, you can use those inferences. But when the decision involves the control of communism in the United States and the protection of this country against the menace of international communism, you must not draw any inferences because a witness refuses to answer questions.

In final analysis it will be most tragic if a majority of the Court continues to follow the Warren, Black, Frankfurter, Douglas line. It may be too much to hope for but hope springs eternal.

Let us hope that this Supreme Court can again revert to law and precedent rather than expediency and an expanding sociological concept of a planned blueprint society, in which the social engineers are preeminent.

Law and precedent stabilize and give society a permanent base for a complicated society.

These opinions and beliefs are pointed out simply to point up the fact that it is often difficult to throw overboard some firmly ingrained beliefs. And for some—even while sitting on the bench—to again not hear voices in the air of some phony political philosophers of times long past.

These are members of the Court, and their personal past history should be remembered when these June decisions on communism are discussed. It is also to be remembered that these men were not elected—they were appointed.

It has always been assumed that the President and Congress made the basic policies in all matters concerning the welfare of the people of the United States. Hence, these policymaking decisions in regard to the control of communism by the Warren Court came as quite a shock to many people. It was a great shock because most thinking Americans have believed for a long time that their heavy tax load, with American soldiers stationed in 69 countries of the world, 30,000 dead American soldiers in Korea, the continued draft of their own sons and relatives, was all due solely to the dangers of worldwide communism.

Not only does the rank and file American know what communism means, but students of history, both amateur and professional, realize the method used by the Communists and intellectual fellow travelers has always been the Trojan-horse approach. Everyone seems to know of this except the black-robed men on the Warren Court.

There is no other conclusion that can be reached except that this Warren Court has now thrown its protective cloak around the fellow travelers and Commmunists. The Court is simply blind to the reality of our times.

These decisions grant an absolute immunity and aid to known Communists and fellow travelers. They place individual Communist rights above national security.

Very few people seem to realize that these June decisions of the Warren Court wiped out not only Federal legislation but State legislation. And again the field of States rights was invaded not by the President, not by the Congress, but by the Court.

When you wipe out another States rights concept that States can not pass their own sedition laws, you just put one more nail in the coffin they are constructing to destroy all States rights.

Jefferson once said:

> There is no danger I apprehend so much as the consolidation of our Government by the noiseless and therefore unalarming instrumentality of the Supreme Court.

We should also remember that ancient Rome existed for 800 years under the classic maxim that the safety of the nation was the supreme law. There are some who seem to think that the Warren Court's attitude toward communism can best be summed up by saying it seems more concerned about protecting the big bad wolf of communism than of Little Red Riding-hood.

Perhaps some will doubt the propriety of a Member of Congress pointing out some of the anticipated effects of these decisions. Justice Clark, a member of this Supreme Court in a dissenting opinion in the Watkins case, put it this way:

> The Court has become the grand inquisitor and supervisor of congressional investigations.

But why has the Court suddenly become so enamored with its position and why seek so much power? The answer to this question is not hard to find if one only remembers, reads, listens, and looks at the mores of the times. The attitude of the Court and its decisions is nothing more nor less than the natural product of 20 years of New Deal-Fair Deal and now modern Republicanism concepts.

These June decisions and others for the past several years clearly show that the Court is listening to the siren voices for the substitution of demagogic political welfare state panaceas instead of equal justice under law.

And all history points out the necessity of trying to curb unlimited power. Lord Chatham expressed it this way:

> Unlimited power corrupts the possessor and this I know, that where the law ends, there tyranny begins.

The President can only be elected now to two terms. During his second term he cannot control with the unseen power he has in his first term. As his second term diminishes, his power and political prestige declines.

There are few persons of mature stature and judgment who believe that maybe some of the members of the Supreme Court see an opportunity in this amendment to the Constitution to assume and arrogate to themselves more power.

That it will permit the Court to assume more power because after all the Court in final analysis is the creature of the President. This danger is apparent because this present Warren Court is superliberal, if not radical. Maybe some members think they can assume the cloak of more false liberalism because of the waning power of the Executive in the last years of his final term.

What will be the eventual outcome of these pro-Communist decisions? It seems clear that Congress should take the lead in wiping out these incredible decisions. It is to be hoped that the Judicial Subcommittee appointed to investigate these decisions will come up with the necessary answer.

There is a famous motto cut in the marble canopy in letters 3 feet high above the entrance of the Supreme Court Building, it reads: "Equal justice under law."

The general American public wants the Supreme Court to follow this motto and forget the theory that they should write sociological decisions to achieve their false ideas of social justice for enemies of this Republic.

This Warren Court seemingly is determined to build up the doctrine that the idea of a limited government must give way to the ideal of totalitarianism.

Congress still has the power to change this direction of travel, but it cannot do it by sitting idly by and letting these decisions go unnoticed. Congress has still not been completely captured by the leftwingers and the internationalists.

Congress still controls the purse strings and can create such inferior courts as it deems advisable and designate the duties and procedures of these courts.

Congress has always had and still has the power to curb a bad court because the Congress gets its powers from the people and the courts gets theirs from the Congress.

Educational Capacity of the Negro

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent I am extending my remarks to include a statement by Kenneth Green, research director, of the Chicago Urban League, which conclusively answers with clarity and authority the implication of a year ago in a magazine of national circulation that the Negro has less capacity for education than the white man. The contention made by Frank C. J. McGurk, in the U. S. News & World Report in September of 1956 is being widely quoted by those most violently opposed to integration in our public schools. It is a contention that strikes at the very concept of democracy and is without a shred of substantiation in the facts of history and in the realities of the present world in which we live.

In the world in which we live the white man is in the great minority. Neither the white man nor the man of color has a monopoly on the qualities of brain and of soul. These qualities are to be found in equal measure among all races when opportunities for development are equal. It is unfortunate that a man once on the teaching staff at West Point should have revived the discarded theory of white superiority at this period when we are making such progress in reaching a plane of brotherhood. It is even more regrettable that a national magazine of large circulation should have made itself the vehicle for its dissemination. I congratulate and commend the Chicago Urban League for its constructive and scholarly job of debunking.

Mr. Green's statement follows:

SELECTED EXCERPTS FROM A CHICAGO URBAN LEAGUE STAFF REPORT ON AN ARTICLE BY FRANK C. J. MCGURK, PH.D.

(By Kenneth Green, research director of the Chicago Urban League)

The national magazine U. S. News & World Report in its September 21, 1956 issue printed an article by Frank C. J. McGurk, Ph. D. Dr. McGurk was identified in the article by U. S. News & World Report as being born and educated in Pennsylvania, been doing research in racial psychology since 1939, just left the staff of the United States Military Academy at West Point, and at the time of the publishing of the article was an associate professor of psychology at Villanova University. In other words, McGurk has some of the trappings of a scientist.

In summary, McGurk's article stated that Negroes as a group do not possess as much capacity for education) as whites as a group." McGurk utilized intelligence tests as his basic tool of analysis. McGurk further claims in the article that increased improvements in the social and economic status of the Negro have not changed his relationship to the whites regarding capacity for education." McGurk concludes, "There is something more important, more basic, to the race problem than differences in external (socioeconomic) opportunity." This is a clever way of concluding that Negroes are in an inherent sense mentally inferior to whites.

The Chicago Urban League became concerned about this article in the U. S. News & World Report and is still concerned about it for the following reasons:

1. The position held by McGurk is contrary to accepted scientific knowledge on the subject.

2. The weight of authority maintains that psychological test results do not support the idea of inherent differences between the intelligence levels of various racial groups.

3. McGurk fails to maintain either a logical consistency or an understanding of the nature of the data utilized.

In spite of the above the league was forced to recognize the importance of the article regardless of its merits because:

(a) It was prepared by a man wearing the trappings of science.

(b) The article was advertised as being scientific in nature.

(c) It appeared in a magazine national in scope.

(d) It is an attack on the feasibility and acceptability of racial integration in our schools.

(e) It is an attack on programs to raise the social and economic levels of Negroes as being ultimately ineffective.

(f) It will be used again and again as a scientific prop in those programs promoting bigotry.

(g) While its initial target is integration of the public-school system in the South, it has a dangerous potential in other areas including Chicago.

(h) Rabid opponents of integration have already carried their message north to the State of Vermont. U. S. News & World Report reported a speech by James F. Byrnes before the State of Vermont Bar Association where he used McGurk as a scientific prop in his arguments against Supreme Court decision on integration in our schools.

(i) McGurk's work is still being cited as exemplified by reference to it in the CONGRESSIONAL RECORD early in 1957.

The league's reaction to McGurk was to compile a complete report of the observations of prominent Chicago area social scientists. The title was "A Chicago Urban League Staff Report on a Scientist's Report on Race Differences by Frank C. J. McGurk, Ph. D." This report is on file at various libraries in the Chicago area, at libraries of prominent American universities and the Library of Congress. However, it is now out of print as far as public distribution is concerned.

SUMMARIES OF CRITICISMS OF M'GURK BY CHICAGO AREA SCIENTISTS

1. The first criticism is by Willard Kerr, Ph. D., assistant professor in applied psychology at Illinois Institute of Technology. Dr. Kerr states that:

"Dr. McGurk's theory rests upon a presentation which is riddled with false assumptions, on the one hand, and glaring omissions of relevant research on the other." Kerr further states that "it is encouraging for the future that most psychologists, unlike Dr. McGurk, concede also that the psychological-social-economic status of the Negro, despite inherent mental equality, is still sufficiently less stimulating than the psychological-social-economic status of the white citizen to produce a differing tendency in test scores."

2. The next criticism was by the Catholic Interracial Council of Chicago which was based on an analysis directed by Dr. Charles T. O'Reilly, director of research at the Loyola School of Social Work. O'Reilly criticizes as follows:

"It would appear that Dr. McGurk has taken facts out of context, ignored the cautions of the researchers who made the studies that he quotes, arrived at conclusions entirely unwarranted by the data he has used. We feel that he has misused the work of reputable scholars."

3. Dr. Leonard Breen, assistant professor in sociology at the University of Chicago, most decisively protests:

"As a person actively conducting research in social sciences, I resent the description given by the editor of Mr. McGurk's paper as 'scientific.' The methodological framework such as that employed in his paper would not even be acceptable as a term-paper framework in an undergraduate course."

4. Peter Jacobsohn, instructor in sociology and race relations at Illinois Institute of Technology, could have his criticism summed up in the following quote:

"In light of all the above (Jacobsohn's) objections, McGurk's article emerges, at best, as a diatribe, haphazardly assembled and shoddily executed. A scientist's unscientific report."

All of the above scientists probed in an intensive way the inconsistencies and inaccuracies of the McGurk article. In order to give an example of the depth that the scientists pursued their subject, the statement of the social scientists consultant to the Catholic Interracial Council of Chicago is presented below. This group was led by Dr. Charles T. O'Reilly, director of research at the Loyola School of Social Work.

"In a recent issue of a national magazine (A Scientist Reports on Race Differences, U. S. News & World Report, Sept. 21, 1956, pp. 92–96) Dr. Frank G. J. McGurk, a Villanova University professor, stated that 'Negroes as a group do not possess as much (capacity for education) as whites as a group' (p. 96). Dr. McGurk's article claims that increased social and economic opportunities for Negroes have increased the psychological differences between Negroes and whites, and he reaches the conclusion that, 'There is something more important, more basic, to the race problem than differences in external opportunity' (p. 96). His clear implication is that there is something in the Negro as a person which makes him unable to benefit from educational opportunity. This is a neat way of saying that Negroes are mentally inferior to whites. In his article, Dr. McGurk says that his ideas are at variance with those of two other professors. He might better have said that they are at variance with the vast majority of psychologists, sociologists, anthropologists, and other scholars interested in the problem discussed by Dr. McGurk.

"Dr. McGurk relies on six articles to support his theory about the Negro's, he says, inability to profit from education. These six were selected, he says, because they permitted a comparison between the World War I performance of Negroes on psychological tests and latter-day performance. In limiting himself to these articles, Dr. McGurk has ruled out many other articles and reports of research that shed light on the problem. Such tactics raise serious questions about the adequacy and objectivity of his research efforts.

"Dr. McGurk says that if cultural (social and economic) opportunities are important in determining capacity for education, an improvement in cultural opportunities should result in an improvement in capacity for education. He then says that the social and economic condition of the Negro has improved since World War I and at a faster rate than for whites. Although possibly true, such a statement needs qualification. One should not forget that even an enormous rapid improvement would leave the average Negro still far behind the average white and, more importantly, still subject to limitations in the form of discrimination and closed doors to advancement. Such things minimize the effect of socio-economic advances. Dr. McGurk has not made this clear.

"To answer his question whether Negroes have more capacity for education due to all of this social and economic improvement, Dr. McGurk turns to certain articles in the literature of psychology. He considered that six articles had enough information to permit a comparison of the Negro's World War I test performance with latter-day performance.

"Several of these articles have been examined to evaluate Dr. McGurk's claims."

Study I (H. A. Tanser—The Settlement of Negroes in Kent County, Ontario, 1939): According to Dr. McGurk, Tanser's study showed that "The social and economic advantages of Canadian life did not increase the relative standing of the Negro children to white children." McGurk apparently accepted Tanser's statement that social and economic opportunities had always been equal for all Negroes and whites in the area, "except for a few minor outbreaks of oppression directed toward the Negroes." Since so much depends upon this alleged equality, it is interesting to note that Bruce, in an article also quoted by McGurk, said of Tanser's study, "although the schools are identical for Tanser's white and Negro groups, the environmental factor of the home has not yet been adequately controlled" (Bruce, p. 94). Other psychologists also claimed that there were significant differences in socio-economic level between the two groups. (A. Anastasi and J. P. Foley, Differential Psychology, 1949, p. 759). These comments make cultural opportunities less equal than McGurk's statement would lead one to believe.

Study II (M. Bruce, Factors Affecting Intelligence Test Performance of Whites and Negroes in the Rural South, Archives of Psychology, N. 292, 1940, pp. 5–99): This was a study of rural white and Negro children from an impoverished area in economic opportunity, which, although low, did not improve the psychological test-score relationship between Negroes and whites.

Bruce found that Negro children made lower test scores than white children but also said, "This, however, cannot be considered proof of the innate inferiority of the Negro sample. One obvious difficulty is that the equation of the two groups was not entirely valid" (p. 95). Bruce was "inclined to believe that there is an innate difference between particular white and Negro groups studied. However, the fact that all the Negro I. Q. distributions * * * are positively skewed with the highest score * * * suggest selective migration and possible social equality. In any event the positive skewness of the Negro I. Q. distribution prevents this study from being used as evidence of the superiority of the white race to the Negro race" (p. 97).

Although Dr. McGurk claims that the children in Bruce's study lived in "equivalent social and economic conditions," Bruce herself states that the equation of the two groups was not entirely valid. Dr. McGurk also did not mention that the education of the Negro and white children had been equated only by choosing Negro and white schools which had the same teacher-pupil ratio, thus leaving uncontrolled a host of other important educational factors.

Study III (A. Shuey, A Comparison of Negro and White College Students by Means of the ACE, Journal of Psychology, 14, 1942, pp. 35–52): Shuey reportedly tested a "very highly selected" group of Negro and white college freshmen. What Dr. McGurk means by highly selected is not clear. Shuey's article says that they were students entering a New York college and apparently no special effort was made to select any of them.

Shuey found that the whites averaged higher test scores than Negroes. Dr. McGurk uses her findings to support this conclusion that equal socio-economic opportunities do not improve Negro test performance.

Shuey matched 43 Negro and 43 white students. The 43 Negroes were all the Negroes in the freshman class at New York University's Washington Square College. They were matched with 43 whites chosen from 3,608 white freshmen. Although Dr. McGurk felt that the students had the same general cultural status and identical social and economic backgrounds, Shuey said: "It obviously cannot be inferred that all environmental factors which conceivably might influence the mental test scores of college students have been equated in this study."

Study IV (Fred Brown, "An Experimental and Critical Study of the Intelligence of Negro and White Kindergarten Children," Journal of General Psychology, 1944, 65 pp. 161–175): Brown's study was made with Minneapolis kindergarten children, and found that Negro children made lower average scores than the white children. Dr. McGurk said that "whatever socioeconomic benefits accrued to the Negro children in Minneapolis in 1944 were not sufficient to change their standing, relative to the white children with whom they were compared, when the World War I data are the basis for comparison."

When Brown found that the Negro children made lower scores he looked for an explanation and after examining his data, said, "Negro children at the kindergarten level in the Minneapolis public schools are not inferior to white children of nominally similar socioeconomic status, in general intellectual capacity" (p. 168). He went on to discuss why the Negroes scored lower, although they lived in the same socioeconomic environment. Brown suggested that Negroes are hemmed in in terms of opportunity, that their aspirations are reduced, their spontaneity in verbal behavior limited and general intellectual development constricted.

These are things that impose real barriers between the Negro and genuine equality, regardless of certain socioeconomic advances. They were overlooked by Dr. McGurk.

Inflation Study

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution on the subject of inflation, Government economy, and the establishment of a commission on this subject, passed by the Illinois House of Representatives.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

House Resolution 64

Whereas the problem of inflation is national in scope and poses the danger of destroying our economic system, and with the failure of such system, the Nation itself; and

Whereas the scope of the problem is too broad for any one State to solve; and

Whereas the consumer price index has gone up 3.4 points in the past 12 months, thus reflecting an additional outlay for living expenses by consumers of $2.5 billion per point; and

Whereas in addition to other causes, the swollen national budget, through increased spending, will result in more inflation; and

Whereas Government spending is a prime cause of inflation in that spending does not increase the Nation's productivity, but rather increases demand of raw materials in direct competition with consumer items, and as a result raises the price of said consumer items, making them too costly, or removing them from the market altogether, and further, the taxes that are collected to pay for these expenditures reduce the funds that otherwise would be available to increase productivity: Therefore be it

Resolved by the House of Representatives of the 70th General Assembly of the State of Illinois, That it is the sense of this house that the Congress of the United States should establish a commission to study all aspects of the inflation problem, especially that segment of this problem that affects fixed income groups, widows, pensioners, etc., and those whose pay raises are few and far between and not in keeping with national rise in prices.

That Congress should curtail spending so as to lessen the outlay of money in nonproductive channels and that said Commission shall make recommendation to the next Congress for means and methods of curbing the inflationary spiral; and that suitable copies of this resolution be sent by the secretary of state to all Members of the Senate and of the House of Representatives of the Congress of the United States.

Adopted by the House, June 27, 1957.
WARREN L. WOOD,
Speaker of the House of Representatives.
FRED W. RUEGG,
Clerk of the House of Representatives.

Samuel K. McConnell, Jr.

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. SAYLOR. Mr. Speaker, one of our most valued and most respected Members will not be in the House when Congress convenes in January. It is SAM MCCONNELL's own decision, and he is to be admired for accepting the directorship of the National Association of Cerebral Palsy, in which position he is further dedicating himself to the interests of his fellow men. Yet we who have been associated with him cannot help but be reluctant to see him take leave of his service in Congress, for SAM MCCONNELL has always been a courageous leader and an inspiration to his colleagues.

The Honorable SAMUEL K. MCCONNELL was a legislator whom I came to admire from the time that he joined the Pennsylvania delegation as a Member of the House. Upon my own election to Congress several years later I found him to be all that I had envisioned: a warm and enthusiastic individual, a conscientious and industrious Congressman. While we have a number of times disagreed on policy or legislation, I have nevertheless always appreciated his points of view and conclusions on all controversial matters. On most of the major issues that came before the House during the past 8 years, SAM MCCONNELL and I were in hearty accord, and I can assure you that having so able a combatant on the same side provides the confidence that is often necessary for a winning effort.

SAM MCCONNELL has established a record in Congress that will increase his stature in Pennsylvania and in the whole Nation with the passing of years. Meanwhile his contributions to mankind in the field which he is now entering will further establish him as one of the century's outstanding Americans. I join my colleagues in wishing him success and continued happiness.

Ethnic U. S. S. R.—The Non-Russian Nations in the Soviet Union

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. FEIGHAN. Mr. Speaker, the Georgetown University Forum has for 11 years maintained a nationwide reputation for its informative and objective discussions of issues commanding public interest and attention. As a tribute to its stature in television and radio, the Georgetown Forum, which is under the able direction of Rev. Francis J. Heyden, S. J., and Rev. Daniel E. Power, S. J., has received over a dozen awards and public acclaims from various parts of the Nation.

Recently the forum presented an outstanding and valuable program devoted to an analysis of the non-Russian nations in the Soviet Union. Unfortunately there are few people in our Government who have any understanding or practical grasp of the importance of these captive non-Russian nations to American national strategy and security. Few realize that the first victims of Russian Communist aggression and imperialism were the once independent countries of Ukraine, White Ruthenia, Georgia, Armenia, Azerbaijan, Cossackia, Turkestan, and several others. Twenty years before Moscow's subjugation of Lithuania, Estonia, and Latvia, these nations were forcibly incorporated in the legal fiction of a multinational federation, known as the U. S. S. R. Our neglect of these captive non-Russian nations in the U. S. S. R. might in the long run prove to be as tragic for us as the brutal Nazi treatment accorded them in World War II was for Germany.

The participants in this forum are all competent students of the many nations making up the U. S. S. R. Col. Charles W. Hostler, of the United States Air Force is the author of Turkism and the Soviets, an excellent work dealing in part with the 23 million Moslem Turkestanis. Dr. James D. Atkinson, a political scientist at Georgetown University, is an analyst of Russian Communist propaganda techniques. Dr. Lev E. Dobriansky, professor of economics at Georgetown University and also national chairman of the Ukrainian Congress Committee of America, has written extensively on the non-Russian nations in the U. S. S. R.

From the viewpoint of American foreign policy and national strategy, the Georgetown University Forum has rendered a real public service down through the years. The directors of the forum are to be commended for their latest contribution to a better understanding of the basic structure of the U. S. S. R. Future efforts in this direction will go a long way in lifting the veil of ignorance from the agelong struggle of a large segment of humanity to be free and independent.

Under leave previously obtained, I insert in the RECORD the program of the Georgetown University Forum of August 25, 1957, on Ethnic U. S. S. R.—The Non-Russian Nations in the Soviet Union, as follows:

ETHNIC U. S. S. R.

Mr. WARREN. Ethnic U. S. S. R. is the topic for the 562d consecutive broadcast of the Georgetown University Radio Forum, another in a series of educational and informative programs from Washington. The Georgetown Forum was founded in 1946.

This is Matthew Warren speaking by transcription from the Raymond Reiss Studio, on the campus of Georgetown University, historic Jesuit seat of learning in the Nation's Capital.

Today's discussion will be Ethnic U. S. S. R. The participants are Col. Charles W. Hostler, United States Air Force, author, Turkism and the Soviets; Dr. James D. Atkinson, department of government, Georgtown University; Dr. Lev E. Dobriansky, department of economics, Georgetown University.

The Soviet Union is often thought of as a nation in the sense of a unified people. In fact, it is multinational and not homogeneous. Western statesmen occasionally talk of the possibility of a splintering-away of non-Russian peoples within the Soviet orbit and the consequent weakening of the U. S. S. R. Relatively little attention has been given to the nationalities within the U. S. S. R. Today the Georgetown University Forum devotes its program to two such races, the Turks and the Ukranians in our discussion of Ethnic U. S. S. R.

Dr. Dobriansky, what is the meaning of "ethnic"?

Dr. DOBRIANSKY. "Ethnic" is a demographic term which refers to a people in a given area or contiguous area differentiated from other peoples by history, language, customs, arts, and even general psychological and sociologic disposition. We use the term "ethnic" here in the United States during some political campaigns when we make reference to such groups as the Polish-American group or the Hungarian-American group and the like. Actually, that is not an accurate description of these groups, for the simple reason that despite the fact that some of them maintain their lingual capacity in the respective language, yet they are in process of assimilation and, above all, they look upon themselves as being part and parcel of the American national fabric. However, when we look at the Soviet Union, the elemental basis of the Soviet Union is ethnic, in that you have many different peoples. They are concentrated in given areas. And consequently, the Soviet Union is not made up of any Soviet people or one nation. It really is a composition of many ethnic groups. I would go even further than that, in that ethnic is the base concept for a more general concept of nation, where you have all of these factors that I have enumerated within the ethnic concept serving as a basis for the concept of nation. When you have a nation, there you have a consciousness on the part of the people that unifies the people and gives them a basis for their aspirations which usually is manifested in a desire for independence of any foreign element. Consequently, the Soviet Union is not only ethnic U. S. S. R., I would say it is a multinational state in which one finds not only the Russian nation of about 92 million people, but also various non-Russian nations of about 110, 112 million people.

Mr. WARREN. Thank you, Doctor. Now, to the book itself under discussion today, Turkism and the Soviets. Colonel Hostler, what was your reason for writing this book?

Colonel HOSTLER. My objective was to expose to the people of the West in a certain amount of detail the existence of this very large Turkish-speaking group of approximately 54 million peoples. They are divided with about 20 million people residing in the Turkish Republic, 5.4 million in Iran, 1.7 million in Afghanistan, making slightly over 27 million in the West. However, on the other side of the Iron Curtain we find the Kazakhs, the Uzbeks, the Kirgizs, the Turkmen, the Azerbaidzhanis, the Kara-Kalpaks, who total another 20 million. To them must be added the approximately 7 million Turkish-speaking peoples who live in Sinkiang, which is now in Red China.

Mr. WARREN. Colonel, what experience have you had in this area?

Colonel HOSTLER. I was first in Turkey during World War II, and afterward was in the first group that went to Turkey during the Truman Aid Program in 1947, and was there for several years. After that I spent several years in the area again at the American University of Bierut, where I continued my Near Eastern studies.

Mr. WARREN. Now to the questions pertaining to the book, Dr. Dobriansky.

Dr. DOBRIANSKY. Colonel Hostler, I would like to raise this particular question, namely, the relationship of the peoples or these republics within central Asia and the general concept of Turkestan. I just mention that you have various nations within the U. S. S. R., and you in turn refer to the Kazakhs, the Turkmen, and the like. Would it be proper to regard these five republics as falling within the concept of a Turkestanian nation and, on top of that, by virtue of their Moslemic basis, having a very close affinity to the entire Moslemic world?

Colonel HOSTLER. Of course, these people are basically, because of their Moslem religion and Islamic background, oriented toward the Middle East culturally and religiously. I believe that their ties to their brethren in the Turkish Republic are very strong. Their likes are cultural, linguistic, religious and ethnic. These strong ties have been manifested on a number of occasions.

Dr. ATKINSON. Mr. Warren, I should like to, first of all, congratulate Colonel Hostler for this book, which is certainly a pioneer study in its field. I think it illustrates two things which are worth mentioning. Number 1, the way in which our professional soldiers, sailors and airmen today are making a definite contribution in various intellectual fields, which I think is most necessary, because national security today certainly involves people who are well informed. I think we may well take pride in people such as Colonel Hostler, who indicate what the Armed Forces are doing quite apart from their professional studies, that is, on their own in their spare time in advancing frontiers of knowledge. Secondly, it would seem to me worth pointing out we have many distinguished universities who are part of the network that we are now with, and that it might well be that some of the students in these universities would consider the particular field which has so far been so well advanced by this book of Colonel Hostler's. I am quite sure many of these people are inquisitive about these areas and would like to explore various other facets of the work

that Colonel Hostler has called "Turkism and the Soviets," in other words, the groups in these areas.

I think certainly, from the standpoint of our own national security, as well as undoubtedly an eventual just peace in the world, nothing could be more advantageous than that the nations which make up this rather rickety Soviet Union, rickety in the sense, let us say, that it is the creation of many, many different national groups that are brought together largely by force, secret police, and so forth, of the Soviets, that nothing could be better than that further questions should be explored by students who are working perhaps for their masters or doctorate, or even undergraduate students who would like to explore this in the way of writing term papers.

Dr. DOBRIANSKY. I should like to supplement your remarks on this score, Dr. Atkinson, by mentioning the fact that here at Georgetown University, we have established the Institute of Ethnic Studies, which will certainly look into this area of central Asia. I agree with you most heartily that Colonel Hostler has made a pioneering contribution in this respect.

The thing that, however, perturbs me in many respects, after having 5 years or so experience in trying to educate certain circles with regard to the multinational composition of the U. S. S. R., is this: How is it that despite this knowledge, despite, let us say, Colonel Hostler's contribution in telling us about the Turkestanian nation, its affinity to the Turks and the entire Moslemic world, that you still have people on high level, and I could cite quite a number of sources, speaking in terms of the Soviet nation, the Soviet people, and if they make references to these various nations, non-Russian nations within the U. S. S. R., they will use such terms as "minorities," "nationalities," just like the so-called ethnic groups here in the United States. Have you had experience along those lines in preparing your magnificent work, Colonel Hostler?

Colonel HOSTLER. Well, the U. S. S. R. is not a national state. It is a heterogenous federation of nationalities. Out of the approximately 200 million persons in the Soviet Union, the Russians number over one-half. The U. S. S. R. is remarkably varied ethnically, and the 11 important ethnic groups number more than 100 separate peoples.

To answer your question directly, it is true that this question has not received sufficient recognition here in Washington. And I hope that in some small way the work that you have discussed today will help to bring that to the attention of people here.

Dr. ATKINSON. There is possibly another thing, Dr. Dobriansky, which I believe is worth mentioning as to some of the confusion or whatever one might like to call it around this problem, and that is it seems to me that sometimes people make a hasty generalization about ethnic groups in the United States and seem to feel there is a contrast between the United States and the Soviet Union. Again, I may be quite wrong. It seems to me that this is falling into a rather easy trap, in this respect: The United States is, if it is anything, the product of an idea, namely, the product of the idea that what is important here is freedom and the dignity of the individual, and that when people came here, whether they were Ukranians, whether they were Poles, or whether they were Hungarians, or whether they were Germans, or Irishmen, or whatever they were, they came here with the idea of making something new which would embody this aspect of freedom. So that the United States has always centered around more an idea. By contrast, the peoples in the Soviet Union, I would say, represent nations that have tended to become submerged under the impact of conquest. Would you agree, Colonel Hostler?

Colonel HOSTLER. Yes. There are a great many problems in this connection. The American tradition involves the right of self-determination. This should apply to the U. S. S. R., and the Soviet Constitution acknowledges this. In the future, these ethnic groups will either be assimilated or dissolved in the Russian state or they will regain their national individuality. The 20th century is an era of the revival of nationalities. Nationalism is the strongest opponent to international communism. Economic units should be preserved. But I personally believe in the case of a third world war or intensification of the cold war, or in case of internal troubles involving disintegration of Soviet power, there is great hope for the Ukraine, the Caucasus, and Turkestan, to regain their independence.

Dr. DOBRIANSKY. I feel still that you gentlemen haven't met my point. There we have these high-level people using concepts that simply do not have factual and real foundation. Now, let us look at this from another angle. I think the economic should be of some concern to us. In your work, Colonel Hostler, you refer to the economic wealth of Kazakstan and that general area. Now, from a national strategic viewpoint, let's say if we were thinking in terms of a third world war, a global war, of what economic and strategic importance would Turkestan be to us?

Colonel HOSTLER. Well, of course, in Azerbaijan and the surrounding areas are the important oil fields of the Soviet Union. This is of tremendous importance to them and would be to us in case of the contingency you mention. Obviously, we should know more about this area. I think perhaps in these kinds of studies that we are making we can call these facts to the attention of the people of the West and make them more aware of the potential of this question.

Mr. WARREN. Colonel, do we have any indication concerning the sympathies and attitudes of the people, the Turks, behind the Iron Curtain and those in the West?

Colonel HOSTLER. Well, I think one extremely important indication occurred during World War II when approximately 200,000 of these Turkish-speaking peoples left the Soviet armed forces and came into the hands of the Germans, and in turn were formed into military units which fought against the Soviets. Now, if a person is willing to go beyond the step of just believing and feeling, and into the field of action, this is very important.

Dr. ATKINSON. I must say, as Colonel Hostler has pointed out quite well in his book, "Turkism and the Soviets" of the extent of the defection from the Soviet forces during the Second World War of the Turkish peoples. And, by the way, one could also list the Ukranian peoples by battalions, regiments, and so forth, and by many other groups, the Georgians, for example, the way in which, as Colonel Hostler has said, these people have indicated their devotion to the fact that they are national groups, that they are real nations by being willing to fight for it.

Now, if we take this, that these people did this even though Hitler gave them very little to hope for, because he simply represented another totalitarian idea, another brutalitarian force, such as the Soviets, if we take it in spite of that this happened, and it did happen, then I think something further comes out of this, and that is this: The extent to which Soviet propaganda has tried to keep the West from being aware of the fact that this constitutes the great weakness to them. And their sensitivity, I think, is further revealed in what happened last November in Hungary, very appropriate since just this past week we have celebrated the Hungarian National Day, that is, St. Stephen's Day, King St. Stephen, the great patron of Hungary, and the day to which the Hungarians rightly look with a great deal of respect. The Soviet leaders were at great pains to try to paint that uprising as some kind of thing inspired by western imperialism or similar propaganda terms that they have used. Actually, as we know quite well, it was on exactly the same scale, one can find precise duplication of the type of thing that the Turkish peoples, Georgians, Ukranians, and others, tried to liberate themselves during the Second World War. The Hungarian response was again a nationalistic response, I believe we can say rather certainly.

Dr. DOBRIANSKY. I am glad you brought up the matter of the Hungarian revolution because there are certain aspects to it that people tend to overlook. For example, there are carloads, freightloads, I should say, of Hungarians, that were being transported to the East. Yet, at Kiev, you had many Ukrainian students and others that rose up in protest, and there was quite a tumult. The observer asked himself what relationship is there between this Ukrainian opposition in Kiev at this time when Hungarian refugees are being deported to the East. I submit here that if we look at this, and indeed, as Colonel Hostler so well points out in his work, as a developmental sequence of the expansion of this Muscovite base from the time of 1917 right on to the present, that we would have a firmer understanding of this entire area. These areas, take Turkestan, Ukraine, the nations in the Caucasian area, Armenia, Azerbaijan, Georgia, and the various Kazagi groups and White Ruthenia, which is close to Poland, all these areas were overrun in the first wave of Russian Communist imperialism in the period from 1918 right up to 1922. In the area of Turkestan, again where Colonel Hostler so well points out, the Basmachi movement got underway and continued right into the thirties opposing Russian Communist domination from Moscow. So here we have a very wide and broad periphery of non-Russian nations. In the Second World War, three more non-Russian nations were incorporated, namely, Lithuania, Estonia, and Latvia, and with that kind of springboard you had the further addition of captive states, Poland, Czechoslovakia, Hungary, and numerous others. Now, as a matter of fact, with this expanded empire, they are pressing into the Middle East, into southeast Asia, and I think, from the viewpoint of policy matters we should look at it in this developmental sense. But I again reiterate that despite all this knowledge, despite your contribution in this respect, Mr. Hostler, when I look at people like say, Mr. Jordan, he has been writing a series on the peoples within the U. S. S. R., it has appeared this last week in the New York Times, yet the caption reads, "The People of Russia." He gives an article on Armenia. Another on the Ukrainian farmer. Why, the ordinary American will tend to believe, "Why, these are Russians." Another case. For example, Mr. George Sokolsky, who knows better, yet, in an article of his on June 7, pointed out, Khrushchev is a Ukrainian and we mustn't let this wily Ukrainian pull the wool over our eyes. As a matter of fact, that is crass misinformation. Mr. Khrushchev is no more Ukrainian than I am a Buddhist priest. The fact here is that we tend to misidentify, misinform, using concepts that have no realistic bearing. When one looks at all of this, one begins to fear as to what sort of basis exists for our policy formulation.

I just want one more point here, if I may put it in, and that is from the Djilas book, the New Class. Fortunately, there are some people who are very well informed about these matters. On page 102, if I may quote, Djilas says: "Who knows anything nowadays about Ukrainian writers and political figures. What has happened to that nation, which is the same size as France and was once the most advanced nation in Russia? You would

think only an amorphous and formless mass of people could remain under this impersonal machine of oppression. However, this is not the case. Here is a most fertile area for American policy in a period, if you will, of peaceful liberation. And the question is, What are we doing? What can we do?" How would you answer those questions, Colonel Hostler?

Colonel HOSTLER. Well, as a military man, you are touching on an area that is very sensitive for me, and naturally I am unable to give you the answer perhaps you would like to hear. As a matter of fact, I would prefer to toss that question to Dr. Atkinson.

Dr. ATKINSON. Colonel Hostler, I must say that it seems to me that you have perhaps unwittingly given certain answers to the question actually in your book; in other words, the situation which exists here is one which may possibly be exploited by us. And I would say in that connection that I certainly don't envisage that it necessarily would be exploited only through another war. Quite the contrary. And I think that is one of the excellent points in your book, proving, I think, once again that the military people are the last to be wanting war since they know so much what it involves. Actually it is a favorite Soviet propaganda trick to accuse the leaders of our Armed Forces, the recent attack on Admral Radford, and so on, of being this way. We know the truth is quite the opposite. I think that you certainly have given some indications there that these people aspire like all people everywhere who are conscious of the dignity of man under God to having their own freedom. And if these forces can be in some way set underway, it seems to me there is a possibility of generating sufficient pressure to help bring this rickety Soviet structure down. And I say "rickety" because I don't believe they are as strong as some of our scared people in this country sometimes think. I think they are much weaker actually than what we sometimes think.

Dr. DOBRIANSKY. How would you do that concretely, Dr. Atkinson? What concrete measures should we use in this area of psychological warfare in order to preclude, to prevent the outbreak of a third world war or the further penetration of other areas by Russian Communist propaganda and agents, and the like?

Dr. ATKINSON. I think we should begin a propaganda campaign of our own at the present time and use representatives of these groups. I don't think we are doing it. Perhaps we are. I see no evidence of it.

Dr. DOBRIANSKY. Would you say the Moscow policy toward these non-Russian nations in the Soviet Union may well serve as a good guide for us?

Dr. ATKINSON. I think so; yes, indeed.

Dr. DOBRIANSKY. I am glad to hear that, because as a matter of fact, in connection with the Ukraine, for example, in the twenties, you had a sort of national communism after the Tito type. Then in the thirties another phase came up, Russianism, Russification. In the forties they witnessed the opposition, the rebellion of over 2 million Ukrainians in the area of Kiev and other areas, some Russians to be sure, going to the German side, anxious to take up arms against Moscow. Then the Khrushchev policy, since 1954, if I were to enumerate all that is being done in order to ingratiate himself in spite of the fact that he is looked upon as the hangman of Ukraine, as so well shown in a pamphlet, Who Are They?, by the House Un-American Activities Committee, showing that Mr. Khruschev is the most hated man in Ukraine. And yet you find that they go ahead and set up an airlines series, the new Turbo-propelled planes, where they call the series, Ukraine. They also have turned over the Crimea to Ukraine, and numerous other gestures.

Mr. WARREN. Gentlemen, I am sorry our time is up for further discussion of today's topic, Ethnic U. S. S. R. You have attended the weekly discussion program, the Georgetown University Radio Forum, broadcast of which was transcribed in the Raymond Reiss Studio on the campus of historic Georgetown University in Washington, D. C. Today's participants are Col. Charles W. Hostler, United States Air Force, author, Turkism and the Soviets; Dr. James D. Atkinson, Department of Government, Georgetown University; Dr. Lev E. Dobriansky, department of economics, Georgetown University.

Comment on United States Foreign Trade Policy

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent that a column written by Mrs. Eleanor Roosevelt which appeared in the St. Louis Post-Dispatch for Friday, June 14, be printed in the Appendix of the RECORD.

In this article Mrs. Roosevelt deals with the question of American membership in the Organization for Trade Cooperation and calls attention to an informative pamphlet on the subject of trade by the Committee on Foreign Trade Education, Inc.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMMENT ON UNITED STATES FOREIGN-TRADE POLICY

(By Eleanor Roosevelt)

DENVER.—I am afraid that too few people in this country fully understand how much the present protectionist backsliding in our foreign-trade policy is playing into the hands of Soviet Russia, which has started an economic and propaganda offensive based on it. In Italy, for instance, the Communist sympathizers have put out a slogan: "The United States is willing to take our sons, but not our goods."

President Eisenhower has endorsed a recent statement by the United States delegation to the U. N., which said, "We could lose this economic contest [with the Russians] unless the country as a whole wakes up to all its implications."

A most interesting fact sheet and a pamphlet called "The Returns Are In" have been issued by the Committee on Foreign Trade Education, Inc. I wish everyone could see them. The aim of this committee is to expand public interest in the United States tariff-trade policy and to stir abroad, popular support for a liberalization of that policy.

Trade is important to good will and understanding among the nations of the world. Some of our leading businessmen understand this. But many of us, who have not made a careful study of trade problems, fail to realize that if we wish to sell goods to the rest of the world we must also buy goods from the rest of the world.

Countries like Great Britain and Japan are beginning to trade with Red China and Russia. They are seeking these new markets because they cannot depend on us and they do not think we understand their situation.

We are expanding our field of protective influence tremendously and our own population is growing rapidly. Both facts mean that our foreign trade must grow, also. The fact sheet before me says, "Imports and exports combined should reach well over $30 billion by the end of 1957. Even now, however, 4 million American families are directly dependent on foreign trade."

Those who believed in high tariffs and a system of protection for our infant industries many years ago must revise their thinking. Today we need a new kind of protection for a forgotten man who is left out in the tariff-trade fight—the consumer.

It is obvious that in making trade agreements someone always must be hurt, so one must make them in the interests of the great majority of people. It has been suggested that when any particular group really is hurt by a trade agreement with a foreign country, some adjustment can be made in that particular industry. It seems to me we have the intelligence to make these adjustments.

I think it is essential that the United States become a member of the Organization for Trade Cooperation this year. This is one of the moves necessary to give an efficient, day-by-day administration to the General Agreement on Tariffs and Trade (known as GATT), which is the international trade agreement to which we and 34 other nations have belonged since 1947.

Already, through GATT, the United States has received well over $7 billion worth of tariff concessions from foreign countries—which is more than the concessions we have given in return. With the help of OTC (Organization for Trade Cooperation), GATT would become even more useful to us than it has been.

Report of the Committee on House Administration for the 85th Congress, 1st Session

EXTENSION OF REMARKS
OF
HON. OMAR BURLESON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. BURLESON. Mr. Speaker, the Committee on House Administration, of which I have the honor to be chairman, has had a busy schedule this 1st session of the 85th Congress with activity in each of the committee's four regular subcommittees plus the work of the Special Subcommittees To Study Federal Printing and Paperwork, the Special Subcommittee on Electrical and Mechanical Office Equipment, and the Special Subcommittee on Parking. A total of 75 bills and resolutions were reported from the committee and passed the House. The carryover of items to the second session is negligible. A breakdown of activity by subcommittee is given below:

SUBCOMMITTEE ON ACCOUNTS, HON. SAMUEL L. FRIEDEL, CHAIRMAN

The Subcommittee on Accounts approved a total of $2,894,500 for studies and investigations to be conducted by committees of the House of Representatives during the 85th Congress. In each case hearings were held by the subcommittee prior to final approval by the full

committee. Following is a list of the committees and the amount of funds approved for each:

Committee	Amount requested	Amount approved
Agriculture	$50,000	$50,000
Armed Services	150,000	150,000
Banking and Currency	105,000	105,000
District of Columbia	10,000	7,000
Education and Labor	150,000	125,000
Foreign Affairs	75,000	75,000
Government Operations	627,000	575,000
House Administration	130,000	130,000
Interior and Insular Affairs	60,000	57,500
Interstate and Foreign Commerce	350,000	350,000
Judiciary	200,000	190,000
Merchant Marine and Fisheries	60,000	60,000
Post Office and Civil Service	50,000	50,000
Public Works	125,000	125,000
Small Business	250,000	225,000
Un-American Activities	305,000	305,000
Veterans' Affairs	75,000	75,000
Ways and Means	250,000	250,000
Total	3,012,000	2,894,500

Four resolutions were referred to the Subcommittee on Accounts which would provide supervision and a residence for congressional pages. Hearings were held by the subcommittee, but action was deferred until the second session. Participating in the hearings were the president of the Parent-Teachers Club of the Capitol Page School, the assistant superintendent of senior high schools in the District of Columbia, the principal of the Capitol Page School, the president of the student council of the Capitol Page School, the Doorkeeper of the House and the authors of the pending legislation. The consensus of the subcommittee members was that there was a definite need for some legislative action which would provide the pages with more supervision, including housing, and better study and recreational facilities.

Legislation was reported by the Subcommittee on Accounts looking to greater efficiency in the administration of congressional offices. This included:

H. R. 790, allowing Members to be reimbursed for official office expenses incurred outside the District of Columbia. The previous law confined such reimbursement to expenses incurred within the Member's district.

H. R. 9282, increasing from 1 to 2 offices the space authorized for each Member in his home district, and increasing the annual allowance for rental of such office space from $900 to $1,200.

H. R. 9406, authorizing the computing of each Member's telephone and telegraph allowance on a biennial rather than an annual basis.

House Resolution 399, increasing each Member's allowance for special-delivery and airmail postage from $200 per annum, and the postage allowance for standing committees from $80 to $180 per annum.

A hearing was held on H. R. 7683, which would simplify payroll administration in the House by providing that salaries of certain employees of the House, and the clerk-hire allowance of Members, shall consist of aggregate annual amounts rather than basic annual amounts plus adidtional amounts.

Fifty-five items of legislation were referred to the Subcommittee on Accounts, 37 of which were reported to the full committee for final action.

SUBCOMMITTEE ON ELECTIONS, HON. ROBERT T. ASHMORE, CHAIRMAN

The principal activity of the Subcommittee on Elections centered around contested election cases and a study of proposals to amend the Hatch Act.

In the contested election case of Dolliver against Coad, the subcommittee conducted three hearings and received the direct testimony of both contestant and contestee. It was determined no contest existed by virtue of the fact that no valid notice of intention to contest the election was filed as contemplated by the appropriate statute governing contested election cases. This finding was reported to the full committee and on April 11, 1957, House Resolution 230 passed the House declaring, in effect, no contest existed.

In the contested election case of Carter against LeCompte, two hearings were conducted by the subcommittee to consider side issues related to the contested election, both involving requests by Mr. Carter. The House adjourned prior to the receipt by the subcommittee of all material involved in the case, thus further action has been deferred until the House convenes for the 2d session of the 85th Congress.

Two hearings were conducted on the bills H. R. 1167 and H. R. 433 which pertain to the Hatch Act. These hearings resulted in the formation of a Special Subcommittee on Elections of the Committee on House Administration which will study the Hatch Act and related laws restricting political activity.

While 32 items of legislation were referred to the Subcommittee on Elections there was an unusually large percentage of identical or similar bills.

SUBCOMMITTEE ON THE LIBRARY AND ENROLLED BILLS, HON. PAUL C. JONES, CHAIRMAN

Thirty-three bills and resolutions were referred to the Subcommittee on the Library and Enrolled Bills, several of which were exact duplicates.

In 5 meetings, the subcommittee took 13 of the measures under consideration, reporting 7 favorably to the full committee. Two of these were laid on table and the Senate bills passed in lieu.

Action was deferred on six bills.

Hearings were held on 3 bills, 2 of which passed and 1 of which failed. The former were House Joint Resolution 233, by Hon. GEORGE MILLER of California, and House Resolution 7813, by Hon. JOHN MCCORMACK. The bill upon which action was deferred, after a hearing with several citizens of Newport News and the Peninsula area of Virginia, was House Resolution 2574, by Hon. EDWARD ROBESON.

Former President Truman appeared as a witness in support of House Resolution 7813; Justice Frankfurter testified in favor of House Joint Resolution 233.

Finally, members of the Library subcommittee who are also members of the Joint Committee of Congress on the Library met with the latter on July 18, 1957, to hear testimony from the Librarian of Congress, Mr. L. Quincy Mumford, and other Library officials, on the matter of codifying the many statutes under which the Library presently functions.

House bills passed:

House Joint Resolution 23—CANNON, appointing Arthur Compton as Smithsonian regent.

House Joint Resolution 202—CANNON, appointing J. N. Brown as Smithsonian regent.

House Joint Resolution 345—KEAN, authorizing extension of Second Division Memorial.

House Resolution 7234—JONES of Missouri, fixing responsibility of Library certifying officers.

House Resolution 7813—MCCORMACK, microfilming Presidential papers in Library.

House bills laid on table; Senate bills passed in lieu:

House Joint Resolution 233—MILLER of California, Senate Concurrent Resolution 31 passed in lieu: Encouraging historical societies to participate in program of National Historical Publications Commission.

House Resolution 8228—THOMPSON of New Jersey, S. 2434 passed in lieu: Removing statutory ceiling on appropriations for books for the blind.

SUBCOMMITTEE ON PRINTING, HON. WAYNE L. HAYS, CHAIRMAN

There were 44 items of legislation referred to the Subcommittee on Printing during the 1st session of the 85th Congress for consideration, 34 from the House and 10 from the Senate. The subcommittee met 7 times and reported 32 of the 44 measures to the Committee on House Administration, all of which passed the House.

Legislation was approved which provided for the printing of additional copies of hearings, reports, and publications in which widespread interest had been indicated. Examples of these items are listed below:

House Concurrent Resolution 17, providing for the printing of additional copies of House Document No. 232 (The Capitol in Story and Pictures), 84th Congress, with emendations.

The Superintendent of Documents sold 40,000 copies of this publication, and has received to date approximately 2,000 requests that could not be filed. The names and addresses of these interested persons have beeen filed and they will be notified if the publication becomes available.

House Concurrent Resolution 62, requesting the printing of additional copies of House Report No. 2966, dealing with the subjects of price discrimination, the Robinson-Patman Act and the Attorney General's National Committee To Study the Antitrust Laws.

House Concurrent Resolution 82, providing for the printing of additional copies of hearings held on the national highway program. Because of the general interest in this program, additional copies were needed.

House Concurrent Resolution 104, providing for the printing of additional copies of the hearings on excise taxes. This request was made due to the great

amount of interest manifested in this subject.

House Concurrent Resolution 215, providing for the printing of additional copies of hearings on The Nature of Radioactive Fallout and Its Effect on Man for the Joint Committee on Atomic Energy. Requests for copies of the hearings are very great due to the widespread interest in the subject.

House Concurrent Resolution 179, providing for the printing of additional copies of report to accompany H. R. 7125, a bill to make technical changes in the Federal excise tax laws.

House Resolution 199, requesting the printing of additional copies of the Synopsis of Benefits Available to Veterans and Their Dependents, prepared by the Committee on Veterans' Affairs, 85th Congress.

House Concurrent Resolution 188, to print as a House document, and additional copies of the document entitled "Congress and the Monopoly Problem, 1900–1956."

House Resolution 97, to print as a House document the document entitled "United States Defense Policies Since World War II."

Senate Concurrent Resolution 22, a request to have printed additional copies of the Internal Security Annual Report for 1956.

Senate Concurrent Resolution 30, providing for the printing of additional copies of a compilation of studies and reports on the foreign-aid program.

Senate Concurrent Resolution 45, authorizing the printing of additional copies of the hearings on the mutual-security program for fiscal year 1958 for the use of the Committee on Foreign Relations.

SPECIAL SUBCOMMITTEE TO STUDY FEDERAL PRINTING AND PAPERWORK, HON. WAYNE L. HAYS, CHAIRMAN

The Subcommittee To Study Federal Printing and Paperwork of the Committee on House Administration, authorized pursuant to House Resolution 128, 85th Congress, continued with its work in a number of phases of the overall study, with emphasis on the following:

First. Survey of libraries designated as depositories of Government publications: As a result of hearings held last year on the sale and distribution of Government publications by the Superintendent of Documents, the subcommittee has completed a comprehensive survey by the medium of detailed questionnaires sent to the 571 depository and some 623 nondepository libraries. The staff had the cooperation of the American Library Association's public document committee, both in the preparation and analysis of these questionnaires, response to which was most gratifying. On the basis of information thus gathered and from intensive research into the subject, a bill has been introduced (H. R. 9186) to revise the laws relating to depository libraries. Hearings have been scheduled to be held in key cities, namely, Chicago, San Francisco, New Orleans, and Boston, on October 7, 10, 14, and 17, respectively, in order to resolve the best thinking on this legislative proposal designed to meet present-day needs.

Second. Procurement and supply of paper for printing, duplicating, and office use in the Federal Government: A study was prepared by the subcommittee staff on this subject, based on data received in reply to inquiries directed to the Government departments and agencies engaged in the purchase and supply of paper for governmental use. The information thus developed constituted the basis for a hearing which was held on May 1 with officials of the General Services Administration and the Government Printing Office in order to amplify the data contained in the staff study. The hearings on this subject, including the staff study, present a picture of overlapping activity and indicate the need for coordinated supply and distribution of commonly used items of paper. Proposed legislation to correct existing conditions which result from outmoded laws is being formulated for presentation to the Congress in the next session.

Third. Government printing facilities—study of wages, hours, and overtime at the Government Printing Office: The data pertaining to wages, hours, and overtime at the Government Printing Office, furnished by the Public Printer at the request of the subcommittee chairman, has been reviewed and analyzed. This data is being studied in relation to the whole subject of Federal printing facilities. Related information, including the procurement of Government printing services from commercial sources, is currently being studied to develop a subject for consideration by the subcommittee during the next session of Congress.

Fourth. International exchange distribution of United States Government publications: The staff is now in the process of obtaining additional information from the United Nations Library, in Geneva, Switzerland, which will assist in the appraisal of existing methods of distributing United States Government publications to other governments. Any needed changes indicated by the information received will be discussed with officials of the Library of Congress and the Smithsonian Institution, who are responsible for this function.

Fifth. Free distribution and sale of identical Government publications: The paradoxical situation which permits many Government publications to be acquired gratuitously, if requested from issuing agencies or from Members of Congress out of quotas available to them, but for a price if ordered from the Superintendent of Documents, is being studied with a view toward the formulation of needed corrective legislation. This condition was cited among several set forth in House Report No. 2945, part II, on the subject of publications management, which the subcommittee issued during the 84th Congress.

SPECIAL SUBCOMMITTEE ON ELECTRICAL AND MECHANICAL OFFICE EQUIPMENT, HON. PAUL C. JONES, CHAIRMAN

The subcommittee through the session viewed demonstrations of the latest developments in the field of office equipment. The list of equipment approved for purchase was revised to remove obsolete equipment and make available newer models of authorized items. Further revisions made available entirely new items which have a practical value in the operation of congressional offices.

The subcommittee has been in almost daily contact with the office of the Clerk of the House, which officer administers the equipment program, to work out the various problems which continually arise and to seek ways and means to improve the program. The transition from manual to electric equipment has been moving along steadily with the result that few congressional offices and committees do not have the most modern office equipment available.

PARKING SUBCOMMITTEE, HON. GEORGE S. LONG, CHAIRMAN

The subcommittee has continued the established parking procedures and rules, working to distribute fairly and equitably the available space. The availability of additional parking space in the areas south of the new and old House Office Buildings has greatly alleviated the parking problem for the time being. The subcommittee is continuing its study of the problem particularly with the view toward shortage of space which will develop as work on the third House Office Building proceeds.

Statehood for Alaska and Hawaii

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution passed by the Senate of the State of Illinois favoring statehood for Alaska and Hawaii.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Senate Resolution 35

Whereas the United States of America has become the greatest power in the history of mankind because it is a united nation of equal and sovereign States and not an empire; and

Whereas the people of the United States devised a method and program of incorporating Territories, which method, as a first step leading to the full privileges of statehood, imposes on the people of such Territories the obligations of the citizens of the several States, while withholding from such Territorial citizens, however, the basic rights of self-government and full representation in the councils of the United States; and

Whereas Alaska and Hawaii have been incorporated as Territories of the United States for many years, and by the very act of such incorporation as United States Territories have been promised the full privileges of statehood with first-class citizenship for the peoples of Alaska and Hawaii; and

Whereas both political parties have recognized that every consideration of fairness demands that the people of these Territories be given the full privileges of American citizenship in their platforms and other policy declarations; and

Whereas the granting of statehood to these Territories will strengthen the United States immeasurably in human resources and in its foreign relations, particularly as regards the great Pacific Basin area: Therefore be it

Resolved, by the Senate of the 70th General Assembly of the State of Illinois, That we do hereby petition the Congress of the United States to grant statehood to Alaska and Hawaii; and be it further

Resolved, That a copy of this resolution be prepared by the secretary of state and forwarded to each Senator and Congressman from Illinois.

Adopted by the Senate June 29, 1957.

JOHN WM. CHAPMAN,
President of the Senate.
EDWARD E. FERNANDES,
Secretary of the Senate.

Engle Water Plan Praised

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. ENGLE. Mr. Speaker, the early response to my proposal, whereby the Federal Government would make nonreimbursible contributions for flood control and interest-free loans for irrigation features of State projects constructed primarily for development of municipal and industrial water, has been most gratifying.

Under leave to extend my remarks, I include some of the articles and editorials appearing in leading newspapers in northern and southern California, with comments on the proposal, as follows:

[From the Sacramento Bee of August 12, 1957]

ENGLE PROPOSES UNITED STATES-STATE WATER PLAN SPEEDUP

(By Edward H. Dickson)

WASHINGTON.—Chairman CLAIR ENGLE of the House Interior and Insular Affairs Committee today disclosed a new legislative plan which he said is designed to speed joint Federal-State construction of water projects in California and the other Western States.

Under the program, the Federal Government for the first time would be allowed to participate in projects designed primarily to furnish domestic and industrial water rather than irrigation water.

ENGLE, a Democrat representing the Sacramento Valley and Sierra Nevada district, made known his views in a letter to Assemblyman Carley Porter, of Los Angeles Country, chairman of the subcommittee of the joint interim committee on State water problems of the State legislature.

He urged that congressional and State legislative water committees meet this fall in California to discuss his suggested legislation and also the financing of future State water projects.

OUTLINES STATE ROLE

Under the Engle plan, the States would build the projects where the prime purpose is the development of domestic and industrial supplies with the State responsible for the financing of these features plus any hydroelectric power development.

The Federal Government would make an outright contribution for flood-control benefits as a recognized Federal responsibility and also make an interest-free loan for benefits ascribed to irrigation.

While many multiple-purpose projects built now by the Federal Government provide for flood control and domestic and industrial water, historically Congress has insisted that the primary purpose be the irrigation of farmland.

[From the Sacramento Bee of August 13, 1957]

FEATHER RIVER PROJECT BACKERS LAUD ENGLE WATER PLAN

Grover C. Shannon, of Yuba City, Sutter County, president of the Feather River Project Association, and Samuel B. Morris, of Los Angeles, a vice president of the group, today lauded a new proposal to speed joint Federal-State construction of water projects.

The water development leaders from the northern and southern sections of the State praised a suggestion made yesterday by Congressman CLAIR ENGLE, Democrat, of Red Bluff, Tehama County, chairman of the House Interior and Insular Affairs Committee.

Under ENGLE's plan the States would build the projects where the prime purpose is the development of domestic and industrial supplies, with the State responsible for the financing of these features plus any hydroelectric power development.

The Federal Government would make an outright contribution for flood-control benefits and also make an interest-free loan for benefits ascribed to irrigation.

MOST ENCOURAGING

"It is most encouraging to learn of Congressman ENGLE's proposal that will make it possible for the Federal Government to grant benefits to State projects like the Feather River project," Shannon said.

"The Feather River Project Association has just adopted a broad financing policy for State water projects. ENGLE's reported suggestions are covered by our program and would aid in the solution of Feather River project financing which is so important to millions of Californians."

Morris called the ENGLE plan a major step in encouraging local initiative to undertake large multipurpose water projects such as the Feather River project.

STATE LEADERSHIP

"Instead of depending upon Uncle Sam to do these jobs, California and other States can take the leadership to solve their own problems, where the major interest is domestic and industrial water supply, with assurance they would get the same degree of financial support for other purposes that would be given a strictly Federal project."

Historically, Congress has insisted that the primary purpose of Federal water projects be the irrigation of farmland. With California's expanding population the domestic and industrial demands are increasing but the cost of supplying them is considered by some water experts as prohibitive for State financing alone.

[From the Los Angeles Examiner of August 13, 1957]

WATER AID PLAN BACKED

Representative CLAIR ENGLE'S proposal that Federal aid be extended to big State projects designed primarily to take water to cities and industries was commended here yesterday by Samuel B. Morris, a Feather River Project Association vice president.

The effect of Engle's proposal, it was indicated, would be that the Federal Government, now limited to aid for or building of projects in which flood control and irrigation of farms is paramount, could help the Feather River project.

In other words, the Government would put up the cash for flood control and provide interest-free loans for the important irrigation aspects of this big project which mainly is concerned with serving big growing cities.

MAJOR STEP

Morris, now a consulting engineer, retired Los Angeles Department of Water and Power general manager, said of Engle's proposal:

"This is a major step in encouraging local initiative to undertake large multipurpose projects such as the Feather River project.

"Instead of depending on Uncle Sam to do these jobs, California and other States can take the leadership to solve their own problems, where the major interest is domestic and industrial water supply.

"This could be done with assurance that they would get the same degree of financial support for other purposes, such as flood control and irrigation, that would be given a strictly Federal project."

LOWER RATES

"The result would be more economical construction and lower water rates for users."

ENGLE, a Democrat from Red Bluff, is chairman of the important House Interior Committee.

He made his proposal to Assemblyman Carley Porter, of Compton, chairman of a subcommittee of the legislature's joint interim committee on State water problems.

ENGLE suggested that this committee and a House group hold hearings this fall on financing the $11,500,000,000 California water plan, of which the Feather River project would be the backbone.

[From the Los Angeles Times of August 14, 1957]

WATER DISTRICT OFFICIALS BACK ENGLE'S PLAN

Officials of the metropolitan water district yesterday joined the Los Angeles Water and Power Department in praising a proposal by Representative CLAIR ENGLE that the Federal Government help pay for, but not control, large municipal and domestic water projects.

Joseph Jensen, chairman of the metropolitan water district board of directors, said ENGLE's suggestion "should go far to advance Federal-State partnership on a fair and sound basis."

ENGLE had suggested, in a letter to Assemblyman Carley Porter, that the Federal Government should remove its ban on financial aid for water projects other than flood control and irrigation works. "Then," ENGLE said, "the Government could help pay for domestic and municipal water projects but control of the works would remain with the State."

Samuel B. Morris, former general manager and now consultant with the Los Angeles Water and Power Department, already had said Engle's suggestion for Federal grants would tremendously increase prospects for a Feather River project to bring water to southern California from the North.

[From the Los Angeles Times of August 15, 1957]

ENGLE'S WATER AID IDEA GAINS FAVOR—PROPOSAL FOR NEW TYPE FEDERAL HELP ON PROJECTS WINS FEATHER RIVER GROUP O. K.

(By Ed Ainsworth)

Additional support, on a statewide basis, was given yesterday to a proposal by Representative CLAIR ENGLE, of California, for a new type of Federal financial aid to State water projects for domestic and industrial use.

The Feather River Association, made up of members all over the State, endorsed the ENGLE suggestion as being in line with its own recently adopted policy statement on water project financing.

WORD ON APPROVAL

Grover C. Shannon, of Yuba City, president of the Feather River Association, made the announcement approving the Engle plan. It already had been approved by Samuel B. Morris, consultant of the Los Angeles Water

and Power Department, and by the Metropolitan Water District of Southern California.

Representative ENGLE, chairman of the House Interior and Insular Affairs Committee, proposed early this week that Federal grants and loans be made on domestic and industrial water projects, with no strings attached.

[From the Los Angeles Herald-Express of August 14, 1957]

FEATHER RIVER PLAN AID

New hope is raised for the planned construction of the giant Feather River project which would bring irrigation, domestic, and industrial water to Los Angeles and other sections of southern California by announcement by Congressman CLAIR ENGLE of proposed new Federal legislation.

Congressman ENGLE, California Democrat, who is chairman of the House Interior and Insular Affairs Committee, is proposing legislation under which the Federal Government would advance interest-free loans for projects in which the principal purpose is to provide municipal and industrial water supplies.

If this legislation is passed, it could mean that the funds required would be provided by the Federal Government and the State would carry out the construction and operation.

Thus one of the biggest hurdles which has faced the Feather River project, obtaining of the necessary funds, would be surmounted.

The other principal obstacle, of course, is lack of agreement of the California legislature on proposed constitutional amendments determining the rights of northern California "counties of origin" and southern California counties to the flow of water from the Feather River.

Southern Californians interested in the future of this end of the State, where the growing water needs of an ever-increasing population are of vital importance, should immediately write to their Congressmen and Senators in Washington requesting that they join forces in helping Congressman ENGLE in his campaign for the proposed legislation.

Samuel B. Morris, nationally known consulting engineer, retired former general manager of the Los Angeles Department of Water and Power and now a vice president of the Feather River Project Association, assesses the new proposal as follows:

"This is a major step in encouraging local initiative to undertake large multipurpose water projects such as the Feather River project.

"Instead of depending upon Uncle Sam to do these jobs, California and other States can take the leadership to solve their own problems, where the major interest is domestic and industrial water supply, with assurance that they would get the same degree of financial support for other purposes that would be given a strictly Federal project.

"The result should be more economical construction costs and lower rates to water users."

[From the Sacramento Bee of August 16, 1957]

ENGLE PLAN WOULD AID NEEDED WATER PROJECTS

Congressman CLAIR ENGLE of the Second California District suggests a new concept of Federal-State cooperation in water resources development which merits the most careful study.

He proposes the Federal Government be authorized to make financial contributions to State projects which are designed primarily to provide water for domestic and industrial purposes.

Historically the Federal Government's role has been confined to irrigation undertakings in order to bring the semiarid lands of the West into useful production.

ENGLE's plan recognizes that, because of the amazing population growth and the shift to an industrial economy, the development of domestic and industrial water supplies is of vital importance to California.

The requirement for an irrigation supply, of course, will persist. And the Federal Government should and under the Engle plan would continue its part in financing such projects as San Luis and the Auburn Dam.

But certainly the Federal Government's responsibility is no less in seeing that cities and towns have enough water.

The difficulty is that the cost of providing such supplies often is prohibitive to the local governments, especially when the sources of water are far removed from the centers of population.

Under ENGLE's proposal, for projects whose primary purpose is a domestic and industrial water supply, Congress would make outright grants for flood control, which is a traditional responsibility of the Federal Government. It also would make interest-free loans for irrigation, as presently is the practice.

The States would finance the dams and incidental hydroelectric installations.

The plan appears to be sound and represents an equitable division of the cost. It would enable States to go ahead with projects which they presently cannot finance. It would represent the highest order of partnership which the Eisenhower administration professes to support.

Moreover, it is a plan which easily would be expanded to aid eastern localities where the problem is not one of irrigation but of domestic water supplies and should appeal to Congressmen from beyond the 100th meridian whose interest in western reclamation often has been remote.

Congress Asked To Declare Korean Conflict a War

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution passed by the Illinois House of Representatives, calling for the Congress officially to declare the Korean conflict a war in order that those who fought there might receive the same recognition and benefits as those who fought in World Wars I and II.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

House Resolution 98

Whereas the war in which members of the Armed Forces of the United States were engaged in Korea has been designated "police action," "Korean conflict," and various terms other than "war"; and

Whereas in Korea the Armed Forces of the United States engaged the enemy in mortal combat, and in winning this victory thousands of our valiant men were killed and thousands more were wounded and disabled. In every sense of the term, this action was definitely a war; and

Whereas because this war in Korea has not been officially designated as a war, the members of the Armed Forces of the United States who served in Korea have been unjustly denied the benefits and recognition which are granted to veterans of wars: Therefore be it

Resolved by the House of Representatives of the 70th General Assembly of the State of Illinois, That we respectfully request and urge the Congress of the United States to officially designate and declare the armed conflict in Korea as a war in order that the valiant and courageous men who fought in that war will be entitled to receive the benefits and recognition awarded to veterans of wars; and that a suitable copy of this preamble and resolution be forwarded by the secretary of state to each Member of the United States Senate and the United States House of Representatives from Illinois.

Adopted by the house, June 28, 1957.

WARREN L. WOOD,
Speaker, House of Representatives.
FRED W. RUEGG,
Clerk, House of Representatives.

Resolution on Hoover Commission Recommendations

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. AVERY. Mr. Speaker, the following resolution concerning certain Hoover Commission recommendations was sent to me by business and professional men of Atchison, Kans. I think it is significant to note that this is not an organization or group sending a resolution to their Congressman at the insistance of some national organization, but rather it is individual taxpayers in the so-called grassroots. Compelled by their interest in promoting good and efficient government, they felt it necessary to inform their Representative in Congress of their thinking on certain Hoover Commission recommendations.

Concerning the first point covered in the resolution, I have yet to see any constructive specific or factual information presented to convince me that this particular Hoover Commission recommendation should not be adopted.

In view of the uniqueness of this resolution, I feel such merits the attention of all Members of Congress. The resolution with the names of those who signed such follows:

Be it—

Resolved, That we, the undersigned, assembled this 22d day of August 1957 in Atchison, Kans., endorse and commend the work of the Hoover Commission and urge the administration and Congress to cooperate vigorously, on a bipartisan basis, in prompt and full consideration of the recommendations of the Commission; and be it further

Resolved, That we, the undersigned, particularly urge the passage of legislation (1) converting the entire Government financial structure to an accrued-expenditure basis requiring agency budgets to be determined on a cost basis with funds granted on a yearly basis and limited to extimates of expenditures actually to be made during that year so as to eliminate carryover appropriations and the disobligation of carryover appropriations; (2) to establish a civilian-managed agency in the Defense Department to unify the procurement, storage, and distribu-

tion of nonmilitary items for all branches of the armed services and to manage services common to all branches of the armed services; and be it further

Resolved, That copies of this resolution be forwarded to (a) Senators CARLSON and SCHOEPPEL, representing the State of Kansas, and Representative AVERY, of this congressional district; and (2) the Citizens' Committee for the Hoover Report, 777 14th Street NW., Washington 5, D. C.

Norman Maugh, Floyd E. Sappington, Philip S. Harris, J. W. Lowry, John Adair, Fred Stein, Delbert Ehret, Fred Martin, Claude Van Dyke, George W. Intfen, Jr., Floyd E. Thelan, Victor W. Yarrington, Chester Keating, Richard A. Dempster, Fritz Smith, Robert O. Johnstone, Gerald W. Foley, Stanley Munson, Addison Mize, N. C. Greenlund, W. M. Lehman, Lowell F. Dagenais, Scott Pulliver, Robert G. Volk, Archie Davis, John Dobbin.

Engle Offers New Water Resources Development Plan

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. ENGLE. Mr. Speaker, water enough for the needs of its growing population is a dominant issue in California. The impasse on our water problems, I believe, stems from trying to divide too little water among too many people. I am advancing a proposal which strikes at the real problem—the financing of additional water development. In a letter to State Assemblyman Carley Porter, I have suggested a new Federal-State relationship for construction of large multiple-purpose projects, where the major cost is for the development of municipal and industrial water. A subcommittee of the House Committee on Interior and Insular Affairs, of which I am chairman, will meet in Los Angeles in November with Mr. Porter's subcommittee of the California Legislature's joint interim committee on State water problems to go into this proposal.

Under leave to extend my remarks, I include the text of my letter to Assemblyman Porter:

COMMITTEE ON INTERIOR
AND INSULAR AFFAIRS,
HOUSE OF REPRESENTATIVES, U. S.,
Washington, D. C., August 8, 1957.

Hon. CARLEY PORTER,
Chairman, Subcommittee of Joint Interim Committee on State Water Problems, Compton, Calif.

DEAR CARLEY: I am very anxious this fall to hold joint hearings with your subcommittee and a subcommittee of our committee on the financial problems relating to California's State water plan.

Specifically, it is my intention to propose a new Federal-State relationship for the construction of large multiple-purpose projects where the major cost is for the development of municipal and industrial water.

As you are no doubt aware, the Federal Government at the present time constructs projects primarily for irrigation through the Bureau of Reclamation and under the reclamation law. In addition, under the small-projects legislation, of which I am the author, the Federal Government advances interest-free money to public agencies for the construction of small irrigation projects costing not in excess of $10 million. The Watershed Protection Act, through the Department of Agriculture, makes provision for Federal grants and loans for the construction of small upstream conservation projects. With reference to flood control, the Federal Government has historically built on a nonreimbursable basis projects primarily dedicated to flood control.

You are, I am sure, familiar with all of these existing Federal water programs. There is one obvious gap: no provision exists in present Federal law for the Federal Government's participation in projects primarily for the development of industrial and municipal water, which is a field of growing importance in all areas of our Nation. I would venture the guess that the major undeveloped water projects in California will be mainly for industrial and municipal water, rather than for irrigation and flood control. Consequently, I have been studying for some months the introduction of legislation to establish the basis and lay down the principles for Federal cooperation in such water-development projects where the major cost is allocated to industrial and municipal water.

I expect, therefore, to propose the joint financing of Federal-State projects where the major cost is for industrial and municipal water, as follows:

First, that the Federal Government contribute to such projects on a nonreimbursable basis an amount equal to the portion of the project allocated to flood-control benefits. This is a recognition of the traditional responsibility of the Federal Government for flood control and follows the precedent established in H. R. 8677, which, as you know, is the bill I introduced providing for the Federal contribution for the flood-control benefits from the Oroville Dam on the Feather River project. This principle has since been merged in the omnibus public-works bill which passed the House last year and was vetoed (for other reasons) by the President, and is currently embodied in this year's omnibus public-works bill (S. 497) which has passed the Senate and was recently voted out of the House Committee on Public Works. Congress has therefore indicated that this is an acceptable principle for Federal-State cooperation in the building of multiple-purpose projects.

Second, that the Federal Government provide a non-interest-bearing loan for the amount of the project cost allocated to irrigation. This procedure would apply the principles of the 50-year-old reclamation law under which non-interest-bearing money is provided by the Federal Government for the development of irrigation projects. It is an expansion of the principle laid down in the small-projects legislation, but of course in this instance is limited to multiple-purpose projects primarily for industrial and municipal water where irrigation water is developed incidental to the main purpose. It is my feeling that Congress would not approve the advance of non-interest-bearing money for construction by the State of a large project primarily for irrigation, but would insist that such a project be built under the present reclamation law if it is to be financed by the Federal Government. I think it important that the traditional function of the Federal Government in building projects under the reclamation law not be invaded. However, I believe there is a good chance of getting Congress to authorize a non-interest-bearing loan to a State for incidental irrigation features of a major project primarily built for industrial and municipal water.

Third, the Federal Government will require a contract to be executed under which the State would agree that the project should be managed in such a fashion as to produce the benefits for which the Federal contribution is made. This follows the present provision for the Federal contribution for the flood-control benefits on the Oroville Dam. As to irrigation, Congress, I am sure, would require that the non-interest-bearing loan for irrigation be subject to the general provisions of reclamation law. However, I expect to propose with reference to the operation of the 160-acre limitation that the same formula be applied as is set forth in the small-projects legislation, namely, that the non-interest-bearing loan apply only to lands in compliance with the 160- or 320-acre limitation and that excess acreage be required to pay an interest charge on the capital cost of supplying those lands with water.

This proposal is intended to be the basis of establishing under general law the character and extent of Federal participation in projects primarily devoted to the supplying of municipal and industrial water. However, I would like to try it on for size in the State of California which, so far as I know, is the only State capable of major financing of its own projects and with water plans of large magnitude already drawn and planned primarily for supplying municipal and industrial water. I have in mind particularly the possible application of this proposal to the financing of the Feather River project, the Biemond plan for the North Bay Aqueduct, and construction of all or part of the projects planned in the north coastal area on the Klamath, Trinity, and Eel Rivers. However, the priority of projects for construction under the State water plan is a matter that rests with State officials and the legislature. Some projects such as the Auburn project are logical and proper extensions of the Central Valley project and should be reserved for Federal construction as a part of that project.

I am especially anxious that this principle be set in motion to develop new water supplies in California. It appears to me that the impasse on California water problems stems from trying to divide too little water among too many people. Southern California interests understandably do not want to buy a pig in a poke—that is, contribute their money to the construction of northern California projects without assurance that southern California will receive benefits from such development. Northern California, on the other hand, doesn't want to promise water deliveries south of the Tehachapis, which may in the future literally leave northern California high and dry.

You will recall that in 1951 I brought a subcommittee to California which sat jointly with the State water committee for the purpose of studying the water problems in the Central Valley project area. We came to the conclusion then that the developed water supplies in the Central Valley project area were overcommitted. We recommended immediate construction of the Trinity River project, and that project has since been authorized and is under construction. However, the water contribution of the Trinity is specifically dedicated to Central Valley project operation. It is contended, as you know, that the Feather River project will not produce sufficient water to permit water deliveries to southern California with adequate margins of safety for future water demands in the north. At the hearings in 1951, serious legal questions were raised as to whether or not the applications made on the Feather River were in conflict with the applications already assigned to the Bureau of Reclamation for operation of the Central Valley project. (See Central Valley project documents, pp. 683 and 701.) I am informed there are interests in California that are prepared to litigate this matter if water deliveries outside of the Central Valley project area

are authorized by the State legislature or by constitutional amendment.

I am not saying which side of this argument is right, but with this state of affairs my strictly legal approach will, in my opinion, wind up in the courts for years. There may or may not be a surplus which is physically and legally exportable, but I am sure that, unless new water supplies are developed, the whole proposition will end up in court, delaying water progress in California for as much as a decade. It seems to me imperative that action be taken now to avoid creating a legal Frankenstein that will paralyze water development. The answer is more water—not litigating over what we have.

The importance of this proposal is that it strikes at the real problem, which is the financing of additional water development. I am advised that your subcommittee has announced that it will investigate the economic and financial feasibility of the State water plan. The foregoing proposal has a direct relationship to that study, and I am therefore suggesting that we arrange this fall for another joint meeting of the State and congressional legislative committees dealing with this subject matter, similar to the one which was so productive in 1951. I have already in draft form legislation to implement the proposal which I have just outlined and would be glad to submit it at an appropriate time to your subcommittee and staff. If this proposal appears to be attractive to you and to your subcommittee, I will be glad to discuss the matter of such a joint hearing. Your early comment on this proposal and the feasibility of a joint meeting with your subcommittee will be appreciated.

Sincerely yours,

CLAIR ENGLE,
Chairman.

Welfare Funds

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. HOLLAND. Mr. Speaker, there is so much adverse publicity concerning welfare funds, it seems to be popular today to show the worst instead of the good which is being done for the betterment of the worker.

The following story written by a very capable correspondent, Mr. James F. McCarthy of the Pittsburgh Sun-Telegraph Washington bureau, states in a few words what the welfare fund means not only to the individuals securing the welfare pensions but to an entire community.

Without the welfare fund of the United Mine Workers of America, a little town of Richeyville would have contained bankrupt storekeepers, empty bank vaults, and a complete collapse of this miners' village.

It is too bad that more publicity is not given to the good things that have been obtained by labor organizations, instead of singling out only those few who have no place in the labor movement.

I hope the Members of Congress will read this small item and realize that this is the real purpose of some of the demands made by unions, which benefit not only the union members but all the people.

The article follows:

MINERS' WELFARE
(By James F. McCarthy)

A story of deep human impact lies so often in the most unlikely places—even among the pages of a thick financial report.

Thousands of miners and their families and hundreds of businessmen in communities of western Pennsylvania and West Virginia would have spotted such a story this week in the financial report of the world's largest non-government-administered welfare operation—the United Mine Workers health, welfare, and retirement fund.

The report told how a little town in Washington County was kept alive by the fund's pension checks after the closing of one of the industry's largest captive mines.

At a time when a few companies and unions are reluctant to tell all about the operation of their welfare funds, the mineworkers issued a comprehensive report on their fund's 11th year of operation.

And they used the report to good public-relations advantage.

Richeyville, between Washington, Pa., and Brownsville, was threatened with financial ruin last April 1, when Jones & Laughlin Steel Corp. closed its Vesta No. 4 mine.

Nearly 800 miners were out of work, and worrying with them and their families as the mine closed were many small businesses in the Richeyville area.

The fund's policy precludes revealing the exact number of beneficiaries in any one community, but most of the Richeyville miners qualified for a $100-a-month pension from the fund in addition to social-security benefits.

Many of the miners were aged between 60 and 66, with service ranging from 26 to 49 years.

Once a month since the mine closing, the miners have been waiting on Jane Street in front of the Richeyville Post Office for the pension checks, which in large measure have kept the town going as before.

In telling the Richeyville story, the report reprinted a 1948 statement by John L. Lewis in which the UMW president said:

"Pensions for coal miners are a community asset. We find now that the businessman and professional man in mining communities recognize that a pension turns a family from a state of pauperization to an asset to the community. The pensioners have purchasing power.

The report by fund trustees Josephine Roche, Charles A. Owen, and Mr. Lewis carried another point of importance for a workshop of the world like Pittsburgh.

It may serve as a guide to the type of reports which will be required from all such funds in the future. Audited reports were made documents of public record and distributed to all operators paying fund royalties.

The fund wound up the fiscal year with a balance of $145,321,221 as compared with $130,172,370 last year.

Revenue amounted to $157,093,034. Expenditures reached $141,944,183. But 97.2 percent of this was paid in direct benefits to 215,702 persons.

Administrative costs were held to a low 2.8 percent of total fund expenditures.

More than 63,000 retired miners received pensions which cost the fund $75,002,584.

The $59,584,594 spent for hospital and medical care benefits paid for 1,631,144 days of hospitalization for 93,679 beneficiaries and millions of visits by physicians and treatments by specialists.

The fund also has in operation all of the 10 hospitals it built in West Virginia, Virginia, and Kentucky in sections where entire communities had lacked adequate medical care.

Mr. Lewis has told House and Senate committees no new Federal legislation is needed in the health, welfare, and retirement fund field.

Other top labor leaders do not agree with him and legislation of some type appears on the way.

But reports like the one issued by the miners this week may set the pattern for welfare-fund reports of the future, either through new laws or the pressure of public opinion.

St. Benedict's Abbey in Atchison, Kans., Celebrates 100th Anniversary

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. AVERY. Mr. Speaker, during the month of August the St. Benedict's Abbey in Atchison, Kans., celebrated its 100th anniversary. Today the Abbey has more than 165 monks but it had only 2 when established at Doniphan, Kans., near Atchison, in April 1857.

In the early 1870's, the struggling monastery fought for its very existence because of drought, grasshopper plagues, and loans at 12 percent. The Benedictine monks overcame the obstacles and today operate St. Benedict's, a college of arts and sciences for more than 600 men, and Maur Hill High School for 210 students.

The combination of financial circumstances that almost terminated the history of St. Benedict's Abbey in the 1870's included the depression after the panic in 1873, the Kansas grasshopper plagues in 1874 and the following years, and debts that the monks incurred in maintaining a frontier college and a crops of priest-missionaries who rode many circuits tending the spiritual needs of settlers.

The Atchison Daily Globe newspaper on August 11, presented a special St. Benedict's centennial section. Among the many excellent articles was the following concerning the work of the monks:

The Atchison monks have given a century of service to God in working with people of the Middle West. Their story begins on the steamboat landing at Doniphan, Kansas Territory, in April 1857, when two monks of St. Vincent's Abbey, Latrobe, Pa., arrived to open a priory there. They were the Reverend Augustine Wirth, O. S. B., the prior, and a seminarian ready to be ordained, the Reverend Casimir Seitz, O. S. B. Another Benedictine had been in Doniphan the year before—the Reverend Henry Lemke, O. S. B. He had built the first Catholic church there and had begged his abbot at Latrobe to open a priory there.

The Benedictine monks on the frontier served the settlers in two ways, as missionaries and as teachers. In 1857 Prior Augustine opened a school at Doniphan. In October 1859, less than a year after he had removed the priory to Atchison, 6 miles south on the Missouri River, he opened St. Benedict's College.

But the small band of Kansas monks made their biggest contribution in the fron-

tier years by a saddle apostolate — the settlers. Quickly they developed three missionary circuits: the first a chain of stations in Atchison and Doniphan counties, the second a string of towns upwards along the Missouri River into Nebraska Territory, and the third a line of Catholic settlements on or near the road to Fort Kearney and the West.

An early superior of the Atchison Benedictines became bishop of the old Leavenworth diocese. He was the Reverend Louis Mary Fink, O. S. B., who after 2 years as prior in Atchison was named by Pope Pius IX in 1870 to be coadjutor to Bishop John Baptist Miege, S. J., Vicar Apostolic of the Kansas Vicariate. Bishop Fink succeeded Miege when the latter resigned in 1874.

In April 1876, St. Benedict's priory at Atchison was raised to the status of an abbey by papal act, and in September the monks elected a Benedictine of Latrobe, the Reverend Innocent Wolf, O. S. B., as their first abbot. He held office until a second abbot, the Reverend Martin Veth, O. S. B., was elected November 10, 1921. The present—the third—abbot of St. Benedict's, the Right Reverend Cuthbert McDonald, O. S. B., was elected July 6, 1943, to succeed Abbot Veth, then in his last illness.

Abbott Cuthbert carries out his many duties in a most commendable manner. He is dedicated to the service of God. He manages the business affairs of the monastic community and the college with professional efficiency. So far in his 14 years as superior, two residence halls, and a new abbey church have been constructed. Abbott Cuthbert and the fathers of the abbey are to be commended on the pioneering and progress which has been recorded. They can point with pride to their courageous heritage.

Four special dates in August marked the official observance of the founding of the monastery. All of the events took place in the new abbey church. The official opening of the St. Benedict's centennial year was coordinated with the first religious ceremony in the new church.

On August 11, the Benedictines set aside the day as Atchison Day, so that their many friends in Atchison and the Atchison populace could see the new church. On that day, Father Abbott Cuthbert McDonald blessed the church and sang a pontifical high Mass with Archbishop Edward Hunkler, Kansas City, Kans., preaching the sermon. Some 4,000 persons visited the church during the blessing ceremony and for the tours following.

On August 16, over 500 Catholic Sisters from northeast Kansas and 5 bordering States formed the choir at a mass sung by Abbott Cuthbert and were then dinner guests of the abbey in the college gymnasium.

On August 28, 30 Benedictine and Trappist abbots from the United States and Canada consecrated—simultaneously—30 minor alters of the new abbey church. Each abbot had some 5 or 6 assistants, which meant that approximately 180 persons were involved in the religious ceremony.

This is believed to be the largest multiple-alter consecration ceremony in the history of the Roman Catholic Church in North America.

On the following day, August 29, the apostolic delegate to the United States, the Most Reverend Amleto G. Cicognani, Washington, D. C., celebrated a pontifical high Mass which culminated the opening centennial activities. This day was set aside for out-of-town guests. An overflow crowd of former Atchison residents, relatives of monks, and graduates of St. Benedict's College attended.

My congratulations and best wishes to the reverend fathers of St. Benedict's. Through the years they have clearly demonstrated their faith in God and the future of America.

Organized Labor Continues Fight To Advance Health of Children

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. MORSE. Mr. President, in the midst of all the furor in our newspapers and other mediums of public communication over the few members in the ranks of organized labor whose actions have been subject to inquiry and judicial action, I should like to call the attention of the Senate to the pioneer work now being done by a much larger and more responsible segment of organized labor in the fight against a terrible and mysterious killer of children which medical science has labeled "cystic fibrosis."

The William Green Memorial Fund committee raised over a million and a quarter dollars to endow philanthropic works as memorials to the late president of the American Federation of Labor, who served with distinction as the head of that great organization from 1924 until his death in 1952 without one single voice ever having been raised to question his honesty and integrity. This memorial fund came from a "head tax" of 1½ cents a member a month for a year—18 cents a member in 1 year if you please—contributed by the international unions. This demonstrates graphically what a great force for good organized labor has been, is at the present time, and will continue to be in the future.

One ordinary rank-and-file member of organized labor here in Washington lost his 9-year-old daughter to this mysterious killer, which is being fought on a national scale by the National Cystic Fibrosis Research Foundation in Philadelphia. He joined the local chapter of the research organization and interested himself in the chapter's work. Last year he made application for a grant from the Green Memorial Foundation to establish a CF clinic to give the extra care to other parents' children that his child did not have. George Meany and the other labor leaders who administer the William Green Memorial fund granted his request and endowed a clinic for cystic fibrosis victims at Children's Hospital in Washington, D. C., with $25,000 which was, incidentally, $5,000 more than he had requested.

There is now operating, at Children's Hospital, the William Green Children's Clinic; conceived, planned, endowed, and supported by organized labor. I have been informed that it is believed to be the first such endowed clinic ever established especially for the diagnosis and treatment of cystic fibrosis.

This disease, which is hereditary, attacks the children with malfunctions of the digestive and respiratory systems, I have been told. While some progress has been made in the past 10 years, including some research at the National Institutes of Health, much still remains to be accomplished to control this disease which medical experts have declared kills more children than any other chronic disease.

I believe that organized labor, which has a magnificent record of service for children, should receive full recognition for this additional piece of good work. It is really pioneering; it is spearheading the assault on this very real danger to the lives of our babies and young children in the Nation; cystic fibrosis.

It is for this reason that I ask to have inserted in the RECORD the action taken by the Washington, D. C., Central Labor Union as it expressed its appreciation for the help which the national AFL-CIO is giving to this great humanitarian work.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Resolved, That we express our appreciation to our parent body, the AFL–CIO, for its encouragement and material help in assisting research and treatment intended to wipe out this scourge of children, cystic fibrosis. This action of our parent body is in line with the services for the health and well-being of all children which has characterized our labor movement from its inception. It is, in a sense, a memorial to those children who have given their lives, we trust not in vain, in order to focus the attention of good men everywhere on this mysterious and merciless killer. We commend the AFL–CIO and urge that similar support be given this movement by State and local federations of labor throughout the Nation.

WASHINGTON CENTRAL LABOR UNION,
C. F. PRELLER, *President*.
F. H. MCGUIGAN, *Secretary*.

An Increase in the Import Duty on Lead and Zinc Is Unnecessary, Unwise, and Against Our National Interest

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. WOLVERTON. Mr. Speaker, I look with considerable alarm upon the effort that is being made by certain interests to build an import barrier against lead and zinc. I am fearful that the adoption of a policy as now being advocated might result to our national disadvantage, harmful to the economy of friendly nations, without benefit to the producers of these metals in our own

Nation, and distinctly detrimental to our national security.

The situation that would be created by the adoption of pending legislation requires that the matter should have careful and serious consideration. Of course, there is naturally a desire to protect our own lead and zinc producers from unfair competition from other countries. But, from such study as I have made, I am not satisfied that any necessity exists at this time for legislation of the kind suggested. In fact, I am inclined to the belief that, in addition to it not being necessary for the protection of our domestic mining industry, it would prove to be highly disadvantageous to our manufacturing industries that use the metals, and also to our own national interest. Thus, praiseworthy though it may be to protect our domestic lead and zinc mining industry, yet, we must be careful that we are not at the same time doing more harm than good.

Aside from the great harm that the adoption of the proposed legislation would have upon the economies of friendly nations in this Western Hemisphere that supply our national needs, both industrial and defense, the fact remains that such a policy is contrary to the defense policy we have sought to build between the nations of North, Central, and South America and ourselves.

The basis of this defense policy has been to strengthen and stabilize the economies of these nations. The result of pending legislation, if adopted, would be to break down all the good that has been accomplished by the neighborly policy of good will and helpfulness to which I have referred.

As an illustration of the injury that would result to the friendly relations existing between this nation and our neighbors to the North and South of us, permit me to make reference to the favorable reaction that followed the announcement of President Eisenhower in 1954 that import duties on lead and zinc would not be increased. The news was received with a great sense of relief in Mexico and as a proof of good will toward Mexico and the other lead and zinc importing countries. The President of Mexico expressed these sentiments in his annual state of the Union message to the Mexican Congress as follows:

> The decision of President Eisenhower of not authorizing the increase in lead and zinc tariffs has been greatly appreciated by the Government of Mexico and by the Mexican people who derive their livelihood from mining, because it contributed to avoid a new crisis in our mining industry.

Could anything be more impressive? Could anything be said that would more clearly demonstrate the buildup that a continuation of the Eisenhower policy would have in further strengthening the friendly relationship that now exists between Mexico and ourselves? And, by the same token, is it not easy to realize that a discontinuance or curtailment of that policy could create a very unfavorable attitude? The same considerations and reactions prevail with respect to the other nations similarly affected as Mexico.

It is most gratifying to note that this announcement by President Eisenhower was accepted by the exporting nations of lead and zinc in the spirit of mutual understanding. For instance, when President Eisenhower announced he would not increase the import duty on lead and zinc, he expressed the hope that the exporting countries would not take undue advantage of the solution that he gave to the problem confronting the producing countries by unduly increasing their exports to the United States. And, it is particular gratifying to further note that the Mexican mining industries observed and complied fully with the wishes of President Eisenhower. Zinc exports from that country to the United States were kept in 1956 at the same level as that of 1953 and lead exports were reduced to about 45 percent of the 1953 figure.

Before any precipitous action is taken by increasing the import duties on lead and zinc, it would be well to study carefully the fact that some of the producing countries which would be adversely affected are among our best customers in the purchase of our products. This is particularly true with respect to Mexico. We should not overlook the fact that Mexico is the third highest United States customer in the entire world. In 1956, for example, Mexico bought from this country goods amounting to $831,100,000, and sold to the United States $404,500,000, leaving an unfavorable balance against Mexico of $426,600,000. These figures taken from the United States Department of Commerce publications—FT-950-1 and 950-E—tell a story too important to be ignored when considering legislation of the kind proposed, which, if adopted, could be highly detrimental to our trade relations with a friendly nation.

There can be no doubt that the adoption of a policy that would eliminate, or even curtail, the exportation of Mexican lead or zinc to this country would strike a vital blow at the Mexican mining industry and could greatly harm the economic status of that country. In this connection, it must be borne in mind that the mining industry is one of Mexico's most important industries. Lead and zinc production in Mexico together represent 55 percent of all mining production. Its importance to the economy of that country can be further understood when it is realized that other metals, such as silver, gold, arsenic, bismuth, and cadmium, are obtained as byproducts of lead-zinc operations. The complete lead-zinc group of metals accounts for 90 percent by value of the total mining production of Mexico.

A further understanding of the vital part the mining industry occupies in the total economy of Mexico can be readily seen when we consider the fact that it employs 70,000 workers in Mexico. Each has an average of 4 dependents, which makes 350,000 persons directly affected, plus thousands who work in allied and related industries. Thus, unemployment, whole or partial, would cause considerable hardship to this large number of people. Furthermore, such restrictions could create political and social problems in Mexico. I have used facts, figures, economic and social considerations based on data relating to Mexico. The same could be duplicated with similar illustrations from other nations that would be equally appropriate.

The closing of mines, wholly or in part, the unemployment that would result, reduced railroad traffic, reduced business activity and foreign trade, independently of foreign exchange complications, could cause a slump in the Mexican economy and that of some other producing countries that would be very serious.

There are many additional considerations that could be appropriately offered as objections to a policy that would increase the import duty on these strategic metals. For instance, the United States is not now and cannot be expected to become self-sufficient in the production of lead and zinc. Thus, aside from the purely economic point of view the proposal is also unsound and unwise from the standpoint of our national security. The United States must depend upon imports for approximately one-third of its requirements for lead and zinc. This has been verified by a report issued by the United States Bureau of Mines in 1956. And, in this connection, it is also well to point out that Mexico and Canada are the only foreign sources of supply that are in a position to ship these strategic materials to us by overland transportation. Incidentally, the same is true of shipments of oil. This should also have our serious consideration as a part of our national security and defense.

It is also worthy to note and emphasize, as we consider this question from the national security and defense angle, that during World War II Mexico supplied the United States with approximately 52 percent of its lead imports and 35 percent of its zinc imports, and that Mexico sold to the United States during the war at prices which were lower than those received by the United States producers. And, as evidence of a close association with the purposes and objectives of the United States in World War II the Mexican Government in agreement with our on Government, prohibited the exportation of strategic materials to any country outside the American Continent and to any American countries that had not adopted similar restrictions, and, at the same time, agreed to supply such materials to our country. All of this was done without formal treaty and on a voluntary basis to enable our two nations in fullest cooperation make a worthwhile contribution in the winning of the war.

The cooperation that existed during the war has continued during the years following the war. Great progress has been made in building strength and power among the nations of this Hemisphere by adopting agreements that bind us and these other nations in strong ties of mutual understanding and cooperate defense, based on the principle of "one for all and all for one."

The value of any such inter-American Treaty of Reciprocal Assistance depends upon the individual economic and industrial strength of each. For this Nation

to take any action that would weaken the economic strength of any of our copartners in this great undertaking to maintain the peace and security of each would be against our own best interests.

The adoption of a policy that would produce the adverse results that I have sought to show is inherent in the proposal to increase import duties on lead and zinc and is extremely unwise and should be unthinkable.

The Girard Decision

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. SMITH of Kansas. Mr. Speaker, much has been written, much has been said in recent weeks concerning the Supreme Court ruling on the Girard case.

Grave doubts and apprehensions have been created in the minds of thousands upon thousands of American parents whose sons are obligated to serve in the Armed Forces of our Nation at some future date. They fear because they know that their sons have now been deprived of some of their constitutional rights.

This betrayal of the protection of our courts to the men who serve our flag is the subject of an article entitled "The Girard Decision," by Mr. T. D. Horton, an able student and authority on our Constitution.

The article draws attention to the constitutional remedy which the House has the exclusive power to apply to the political encroachments and depredations of the judiciary:

THE GIRARD DECISION

(By T. D. Horton, member, executive council, Defenders of the American Constitution)

There has been a reassuring public reaction against the Girard case ruling of the Supreme Court—a court that subscribes in its entirety and perpetrates what Van Buren called "the dangerous heresy that the Constitution is to be interpreted, not by the well-understood intentions of those who framed and of those who adopted it but by what can be made out of its language by ingenious interpretation" (Autobiography of Martin Van Buren, p. 551, published as vol. II of the Annual Report of the American Historical Association, 1918).

But the widespread public indignation at the Supreme Court's heresy has been lacking in one important element—a realization that the Supreme Court in its Girard decision has committed an impeachable offense under the Constitution of the United States, which provides that all officers of the United States shall be removed by impeachment for "high crimes and misdemeanors." The following quotation from Blackstone's commentaries on the common law clearly defines the offense which the Supreme Court has committed in the Girard case:

"And by the Habeas Corpus Act (31 Car. II. c. 2) (that second Magna Carta and stable bulwark of our liberties) it is enacted that no subject of this realm who is an inhabitant of England, Wales, or Berwick shall be sent prisoner into Scotland, Ireland, Jersey, Guernsey, or places beyond the seas (where they cannot have the full benefit and protection of the common law), but that all such imprisonments shall be illegal; that the person who shall dare to commit another contrary to this law shall be disabled from bearing any office, shall incur the penalty of a praemunire, and be incapable of receiving the King's pardon; and the party suffering shall also have his private action against the person committing, and all his aiders, advisers, and abettors, and shall recover treble costs, besides his damages, which no jury shall assess at less than 500 pounds" (Blackstone's Commentaries on the Laws of England, vol. I, pp. 137, 138, 17th edition London, 1830).

This common law was in force at the time of the adoption of the Constitution; and in the Girard case the Supreme Court has committed at least a "misdemeanor," which should subject the Court to wholesale removal from office.

Representative Bowler

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. O'BRIEN of Illinois. Mr. Speaker, I yield to the gentleman from Missouri [Mr. CANNON].

Mr. CANNON. Mr. Speaker, one of the oldest and wisest and most useful and most valued Members of the House has answered his last rollcall.

I felt that I knew Mr. BOWLER for many years before I met him and men acquainted with public affairs over the Nation knew him by reputation long before he came to the House of Representatives.

In the eventful 82 years of his life he had witnessed and had participated largely in the making of the history of the most fruitful and most progressive half century of the 2,000 years since the establishment of the calendar.

In his own beloved city of Chicago he had been an inspiring and dominant force for progress and achievement every one of those crucial 50 years. While we shall miss him here in the House and in the Nation his loss will be particularly deplored in the great central city of the continent where he rendered such invaluable service to his community and all mankind.

His assignment to the Committee on Appropriations came earlier than usually comes to the average Member. As a rule a Member serves a longer period of apprenticeship on some legislative committee before coming to the Appropriations Committee. But his wide experience, his intimate knowledge and understanding of basic metropolitan problems brought him to the committee after two terms in the House and we looked forward to having the benefit of his wise counsel and technical experience in Government with warmest anticipation.

Although he passes on in the fullness of years and after distinguished service and eminent success crowned by honors and every evidence of the approval and grateful appreciation of his city and his Nation, it is to be deeply regretted that we could not longer have had the benefit of his association and cooperation.

I join with those who knew him and loved him best in extending our deepest sympathy to his family and his constituents.

Washington Report

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. SANTANGELO. Mr. Speaker, the 18th Congressional District of New York which I am privileged to represent has always depended upon its Congressman for leadership, both in Washington and in the community. From January 3, 1957, the day I first took office as Congressman, I have tried to provide leadership to our community. Now that the congressional session has drawn to a close, may I give you a résumé of the highlights of my community service.

In order to serve the residents of my congressional district, I have maintained two congressional offices. One is located at 1434 First Avenue and the other at 208 East 116th Street. My First Avenue office has been open every evening and on Saturdays. It has been staffed by five lawyers and secretarial help. On Saturdays I personally interviewed my constituents and rendered whatever assistance was possible. My 116th Street office is open every Monday and Thursday evening. Two representatives work there and are ready to serve. In both offices during these past 7 months, over 2,500 people have had occasion to ask for advice and assistance. My office has furnished this help without charge and without regard to politics. Our objective has been to help.

In order to better understand the needs of our people, I have called together an advisory council, consisting of various organizations, trade unions, parent-teachers' associations, churches, settlement houses, civil groups, tenant associations, and social and athletic clubs. Once a month, I made an oral report of my legislative work in Washington, my activities in the community, and asked for a discussion of the problems which beset our area. These problems were discussed, and after deliberation, action was taken by myself and the organizations which were cooperating with me.

This procedure has proved helpful. When the New York State Legislature was contemplating an end to rent control, we organized a newspaper and letter campaign to urge the retention of residential rent control. During the legislative rent hearings, I appeared in Albany with a member of my staff to urge the legislature to extend residential rent control. Our newspaper campaign, publicized in the El Diario, the Spanish newspaper, brought in approximately

10,000 letters to the New York State legislative leaders. As you know, public pressure caused a reversal of attitude and caused the legislature to give to tenants much needed protection for an additional 2 years, and I was pleased to play a role in that change of policy.

My advisory council brought to my attention the plight of the east Harlem businessmen and merchants who were being dislocated without adequate compensation and with no provision being made for sufficient stores in new projects. Apart from the legislation which I introduced in Washington providing for payment up to the maximum of $3,000 for expenses to business in relocating, I conferred with the merchants of east Harlem, our City Councilman, Mr. Merli, our state assemblyman and senator, and the commissioner of borough works. As a result of our conference, we have brought about the construction of additional stores in the new Benjamin Franklin project between 106th and 108th Streets, and for adequate lighting facilities along Second and First Avenues.

When 400 families were threatened with an eviction in Yorkville with a luxury apartment house, I appeared before the New York City Board of Estimates and pleaded for a halt to this program unless relocation of families was provided for. I am happy to state that because of concerted efforts of an aroused community, this program was abandoned and irreparable harm was avoided.

Just as I fought to protect civil rights on the floor of Congress, I fought in our community to protect the innocent and the elderly men who belonged to social clubs. Several social clubs were being unjustly raided and its members arrested without cause by the police department. My office staff represented successfully these men in the magistrate's court, but I also took preventive action. I took up personally with the police department the matters of these arrests, and after conference and investigation, received assurances that decent social clubs would not be harassed or arrested. Today I am proud to report that a police sergeant participates in my advisory council and offers suggestions for the improvement of community activities.

Our activities have taken all forms. On May 17, we participated in the prayer pilgrimage in Washington to commemorate the third anniversary of the Supreme Court decision which struck down discrimination in public schools. I have organized a committee in the advisory council for the saving of Benjamin Franklin High School, whose continuation is being threatened as a high school. In addition, I obtained from the board of elections the use of Benjamin Franklin High School for the use of permanent personal registration so that the voting public could register more easily and would not be inconvenienced. Furthermore, we called upon, and received from the city of New York, additional funds for East Harlem in order to obtain additional educational and vocational counselors for our area in order that we might give our area the tools for developing a better youth and to provide conditions leading to better citizenship. Newspaper reports have indicated that juvenile delinquency has decreased in East Harlem.

The personal contact which I have enjoyed with these various organizations and with individuals has offered a great opportunity to serve my people. I have been able with the assistance of my staff and volunteers to represent numerous tenants who were being evicted or displaced, to obtain welfare for needy persons, to obtain apartments in low-income projects for families who need housing, to obtain employment from the division of employment and from the post office for people who can work and want to work, to halt deportation of several residents in our area and to facilitate the issuance of visas to persons rightfully entitled to enter America, to prepare and process applications for immigration visas, to secure compassionate transfers for veterans with a serious problem, and to adjust service discharges. The type of assistance which I have given has depended to a large degree upon the complexity of the problem involved. Frequently, my efforts met with a certain degree of success, but even if they were not successful, I have tried to help. These services have been rendered without fee or without regard to politics.

I hope that I shall be of continuous service to my constituents in the years to come.

Sam McConnell

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. SIMPSON of Pennsylvania. Mr. Speaker, I wish to join my colleagues from Pennsylvania and from other States in wishing SAM MCCONNELL the very best of everything as he leaves the Halls of Congress.

We will sorely miss him as our colleague in this House but he may be assured that the affection in which he is held here will not subside. We insist that he keep in touch with us and no doubt we will have opportunities to see him from time to time.

His devotion to his duties as a Member of this House and of the Education and Labor Committee is well known and need not be recounted here. National recognition has attended his efforts in behalf of the American people, and those who know him best are especially mindful of his sincerity of purpose.

SAM MCCONNELL has also rendered devoted and tireless service to his political party. His accomplishments as chairman of the Montgomery County Republican Committee have marked him as one of the most astute party leaders in the Commonwealth of Pennsylvania. Undoubtedly, his activities on the county level have been a major factor in his thorough appreciation of the problems confronting State and local governmental authorities.

Since I became chairman of the National Republican Congressional Committee, I have worked closely with SAM on numerous congressional campaign problems, particularly in Pennsylvania. He has been Pennsylvania's member on the congressional committee, and I have sought his advice and assistance on a regular basis.

I will miss his wise counsel in this important area of my responsibilities. Pennsylvania Republicans will hope that SAM will maintain his interest in Republican affairs.

In his new position of trust, SAM MCCONNELL will give further evidence of his great ability in handling matters of vital public concern. We wish him well.

Now 40 Million Get Checks From Federal, State, and Local Governments

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. GWINN. Mr. Speaker, back in 1952 I had a compilation made which showed that at that time 36,983,248 persons were getting checks for services, subsidies, or relief payments from Federal, State, and local government sources.

Previously I have called the attention of the Congress to the fact that the Federal bureaucracy had grown from 604,948 employees in 1930 with total payrolls of $1,100,273,000 to more than 2,400,000 civilian employees in 1953 with payrolls totaling $10,499,000,000 for that year. Mr. Speaker, I am deeply disturbed by the trend toward socialism in our society and Government, and to say at least I am deeply disappointed at the results of a new survey made for me by Paul O. Peters, an economist and statistician, of Washington, D. C., which shows that as of June 30, 1957, more than 40 million persons received checks during fiscal year 1957 for services or other reasons from Federal, State, and local government sources. The details are given in the table following:

Forty million eight hundred and ten thousand six hundred and ninety-nine persons received checks from Federal, State, and local governments during the fiscal year 1957 for services, grants-in-aid, social security, and veteran benefits, agricultural subsidies, and a myriad of other reasons. Included in the number receiving such financial assistance were 48,528 foreign residents, many now living in such Communist-controlled countries as Albania, Bulgaria, China, Czechoslovakia, East Germany, and even in the Soviet Union.

Payrolls for Federal, State, and local employees of government, including teachers and other employees of educational institutions total well over $25 billion a year with the Federal employees alone getting more than $11 billion.

Benefit payments under the old-age and survivors insurance trust fund in fiscal 1957 totaled $6,514,580,758 and withdrawals by the States from the unemployment trust

fund during fiscal 1957 amounted to $1,510,749,527.

The civil service retirement fund disbursed $588,073,111 during fiscal 1957 to 246,362 living beneficiaries with 80,749 persons entitled to survivor benefits.

During the month of July 1957, the first in fiscal 1958, benefit payments from trust and other funds exceeded income by $362,170,296 and it is estimated that social security benefits during all of 1958 will exceed withholding receipts by over a billion dollars.

Besides the more than 40 million persons receiving checks from Federal, State, and local governments, an additional 5,274,036 benefited from Veterans' Administration loan guaranties and more than 5 million others received either loan guaranties or aid in the form of insurance of one kind or another.

Included in this group are the clients of the Federal Crop Insurance Corporation which operated with a capital deficit (loss) of $20,811,599 in fiscal 1957 while the taxpayers of the country furnished an additional $6,210,000 from the public till for administrative expenses. Another of the agencies of the Federal Government which operates on a deficit basis is the Farmers' Home Administration with an actual cumulative deficit of $54,100,826 in fiscal 1956 and an estimated cumulative deficit of $78,120,389 by the end of fiscal 1957.

The table following shows the number of persons receiving checks from Federal, State, and local governments during the fiscal year 1957:

Checks issued by Federal, State, and local Governments for services, grants-in-aid or loans of various kinds

1. Federal civilian employees, June 1957	2,401,292
Foreign national employed in executive branch	276,823
State and local employees, May 1957	5,154,000
Teachers and other educational employees	2,341,500
Total	10,173,615
2. Public assistance programs (June 1957):	
Old-age assistance	2,503,823
Aid to dependent children and parents	2,398,693
Aid to the blind	108,441
Aid to the permanently and totally disabled	283,901
General relief assistance	294,000
Total	5,588,858
3. Old-age and Survivors Insurance Act: Monthly benefits in current-payment status, at the end of June 1957	10,342,119
4. Unemployment Insurance Act, June 30, 1957:	
Average weekly insured unemployment	1,592,478
Railroad unemployment insurance	42,000
Total	1,634,478
5. Civil Service Retirement Act, June 30, 1957:	
Retired personnel	246,362
Survivor benefits	80,749
Total	327,111
6. Railroad Retirement Act, June 1957:	
Retired personnel	340,240
Survivors benefits	178,000
Total	518,240

Checks issued by Federal, State, and local Governments for services, grants-in-aid or loans of various kinds—Continued

7. Veterans' Administration, June 1957:	
Disability compensation or pensions, all wars	2,794,877
Death compensation or pensions, all wars	862,955
Veterans educational and vocational assistance Public Laws 346 and 550	362,812
Total	4,020,644
8. Agricultural programs, payees:	
Conservation programs, payees number	2,162,972
Beet- and cane-sugar producers, subsidy—farmers receiving parity payments	600,000
Total	2,835,533
9. State and local retirement programs:	
Retired personnel	310,000
Survivor beneficiaries	52,000
Disability benefits	46,000
Total	408,000
10. State and local unemployment benefits: Number of persons receiving benefits in 1956	893,600
11. Personnel in Defense Department:	
Army, Air Force, Navy, Marine Corps	3,082,244
Defense Reserves	219,598
Army and Air National Guard	469,700
Coast Guard	[1] 26,209

A Report to the People on the 1st Session of the 85th Congress

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. SANTANGELO. Mr. Speaker, as the 1st year of the 85th Congress comes to a close, I wish to report to the people whom I am privileged to represent in the 18th Congressional District of New York. This first session, which lasted from January 3, 1957, to August 30, 1957, was the longest in the last 25 years. Much has been accomplished, much has been left undone, and analysts who demand clear-cut verdicts will be disappointed.

The major drives of this session were to economize, to reduce expenditures without impairing our defenses, and to forge a civil-rights bill. The major legislation dealt with civil rights, the mutual-security program, the revision of the immigration law, postal rate and pay increases, pay increases for classified employees, aid to stimulate private housing, aid to school construction, the Middle East doctrine, the protection of the FBI files, and, of course, the money appropriations to run the governmental agencies.

This session has rejected some of the President's proposals, but some of the Presidential defeats, as, for example, in the death of the school-aid bill, were caused largely by members of his own party and were compounded by his occasional lack of enthusiastic leadership. While everybody seemed to like Ike, no one knew for certain what Ike liked. Perhaps, the President's lack of influence with his party rests with the fact that under the Constitution this is his last term. Of necessity, therefore, the President had to appeal to bipartisan support to offset the alliance between southern Democratic conservatives and Republicans. This bipartisan support prevented the runaway economy movement and held the cuts to $5 billion where, in the beginning, it appeared that the total reduction might run about $10 billion.

As a first-term Congressman, I have taken a keen interest in the debate and, on many occasions, participated.

CIVIL RIGHTS

The civil rights legislation which was considered and passed was arrived at after many skirmishes and compromises. The results did not fully satisfy those who demanded a strong civil rights bill nor did the final measure please those who sought to limit the measure. Here was an issue, harsh, passionate and highly explosive. Never have I heard greater and more inspiring oratory on any subject matter. This issue divided the Democratic Party. On this basic civil-rights bill, the President neither wholly won nor wholly lost. The Deep South, the anti-civil-rights section of the country, was not totally defeated or victorious.

After 87 years the Congress finally enacted a measure affecting civil rights. The measure which finally passed protected only the right to vote and had these features: First created a Federal Civil Rights Commission; second, established a Civil Rights Division within the Department of Justice; third, gave formidable new powers to the Federal Government to protect a single but basic civil right to vote—that is to say, Federal prosecutors are empowered to obtain injunctions with or without the consent of the victim against actual or threatened interference with the right to vote; fourth, gave to the judge in minor instances the discretion to proceed without a jury, but it also gave to the defendant charged with criminal contempt, a procedure whereby he could obtain a jury trial after conviction by a judge for criminal contempt, but imposed a possible increased jail sentence or fine if he selected a trial by jury and was found guilty.

The absolute right to a trial by jury, hich was sought as an amendment to e original bill, was defeated in the ouse, but was passed by the Senate d finally compromised in the final l.

I was happy to participate in the de- te on this bill affecting human rights d the right to vote. I voted for the al bill and against the amendment in e House which would require a jury al when a defendant was 'n contempt court.

MIDDLE EAST DOCTRINE AND FOREIGN AID

The first great issue to confront Con- ess was the Middle East crisis. The esident on January 5, asked the Senate d House to support him in an unusual terprise, a joint Executive-congres- nal proclamation pledging this coun- y to use its military forces to keep ace in the Middle East. He also re- ested unrestricted authority to spend to $200 million in already appro- iated foreign-aid funds for special ojects in the Middle East. This pro- am would assist those countries that re or might become friends of the mocracies.

This approach heralded and signaled turning point in the President's for- n policy relationship with Congress. retofore, Congress had responded ickly, but not this year. After lengthy d bitter debate, which many Congress- en questioned the wisdom and effec- eness of the Eisenhower doctrine, the use approved the resolution. The nate refused to follow blindly and after months' debate, fixed the ultimate re- onsibility on the President directly. e Senate refused the President's re- est for unconditional authorization to e troops as he might see fit and in- ad proclaimed that the United States s prepared to act militarily if the esident should deem it necessary. e House concurred in this resolution 6 to 61 with 188 Democrats, including yself, and 167 Republicans for the easure.

FOREIGN AID

The foreign aid policy received severe rutiny and cold reappraisal by an nomy-minded Congress. The struggle oceeded on two legislative courses. rst, on the matter of policy, called thorization, and second, on the matter money appropriations. The President quested authority to grant long-term nomic assistance. The House cut wn the Senate authorization of 3 years 2 years. The House appropriation l slashed deeply into the estimated nds and provided $2,524,760,000. The use spokesman resisted Presidential d Senate pressures and demonstrated t sufficient funds were still available m former appropriations. The House easure cut 25.4 percent from the esti- tes. The Senate, at the importunities the President, sought to increase the propriation. The final measure was ,768,760,000 and 18.2 percent cut from e estimates. The outcome was a modi- d defeat for the administration, but t so severe a defeat as seemed certain m the belligerent atmosphere of the use whose Members were listening to e demands of their voters to reduce governmental spending. I voted for the foreign-aid bill with the reductions. Congress, therefore, cut foreign aid by $1 billion and cut from the defense appropriations for the Army, Navy, and Air Force, $2,368,150,000 out of approximately $36,128,000,000. It was the considered judgment that too much fat was in the estimates for defense and that billions of dollars from last year's appropriations were neither spent nor obligated and were still available for defense spending.

POSTAL RATES AND PAY INCREASES

After lengthy hearings by the Post Office and Civil Service Committee, a postal rate increase was approved, subsequently passed by the House, and not acted upon by the Senate. When the chairman refused to call hearings for postal pay raises, a petition was circulated, discharging the committee from further consideration and bringing the pay raise bill to the floor without committee aprpoval. The required 218 signatures were obtained and brought about action by the Post Office Committee to hold hearings. After full hearings an increase of $546 across the board was recommended. The administration opposed the modest increases as inflationary, while it did nothing about rising prices of steel with its concomitant rise of prices of basic commodities, such as refrigerators, stoves, and other articles using steel. Classified employees also clamored for justifiable pay increases, and the Post Office Committee approved a 12-percent increase. I was privileged as a member of the Post Office Committee to fight for pay increases for our postal employees and classified governmental workers who cannot bargain or strike. I participated actively in the debate for decent wages to permit our governmental servants to work in dignity and not labor in debt.

SCHOOL AID

A major disappointment was the defeat of the school construction bill by a close margin of five votes. The House considered a $1½ billion authorization for construction over a period of 5 years as a starter, but because of lack of Republican support, the motion by a southern conservative Democrat to strike out the enacting clause, that is to say to kill the bill, was approved. Among those who voted to kill this bill were ranking Republicans. Despite the importunities of the Secretary of Health, Education, and Welfare, Marion Folsom, to the President to call Republicans to support the bill, no help came from the White House. One hundred and eleven Republicans and ninety-seven Democrats voted to kill the bill. Despite the Republican platform advocating aid for school construction, this bill was defeated.

In summary, I wish to point out those bills which I supported and which I opposed. I voted for the Mideast doctrine in the original and in its final form. I supported foreign aid with the cuts. I supported Federal aid to school construction, the protection of civil rights, and the right to vote. I opposed the jury trial amendment to the civil rights bill which would have made impossible the enforcement of the legislation. I voted for aid to small business and aid to private housing. I supported the immigration law which passed the House at the close of the session, which bill, while not completely satisfactory, was a step in the right direction. I voted against postal rate increases because of the unfair provisions against the users of first-class mail while favoring the users of the second class and junk mail. I voted for postal pay and classified employee increases. I voted for the bill for the protection of FBI files from indiscriminate inspection and at the same time would permit a defendant the right to inspect statements by a Government witness if the court determined it would not prejudice the safety of the United States.

Last year while running for Congress, the voters of my district, in response to a questionnaire circulated by me, indicated their viewpoints and preferences. I have voted my conscience with the knowledge of what my contituents desired. It was an honor and a privilege to be a Member of the House of Representatives.

Despite the enforced absence from my five young children, family, and wife, this session was enlightening, stimulating, and pleasant. Many of my burdens and difficulties were eased by an extremely efficient staff in Washington and New York and by the House employees who were always ready to assist and help.

Endorsing Report of Commission on Government Security

EXTENSION OF REMARKS

OF

HON. WILLIAM M. McCULLOCH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include Resolution No. 258, approved by the 58th National Encampment of the Veterans of Foreign Wars of the United States, August 25–30, 1957, Miami, Fla., endorsing the report of the Commission on Government Security.

As you know, the Commission on Government Security reported to the Congress this past June and the highly important recommendations of the Commission will be before the 2d session of the 85th Congress.

RESOLUTION 258, ENDORSING REPORT OF COMMISSION ON GOVERNMENT SECURITY

Whereas the commander in chief served as a member of the Citizens Advisory Committee of the 12-man nonpartisan Commission on Government Security, established by Congress in 1955 to review the various Federal security programs; and

Whereas the Veterans of Foreign Wars of the United States is firmly convinced that there is a real and formidable danger to the Nation from international communism; and

Whereas the recommendations of the Commission on Government Security, if put into effect, would enhance the protection afforded national security while substantial-

ly increasing the protection of the individual: Now, therefore, be it

Resolved by the 58th National Encampment of the Veterans of Foreign Wars of the United States, That the President and the Congress should, without delay, take the recommended administrative and legislative action to implement the proposals of the Commission, excepting any which might tend to weaken the Veterans' Preference Act of 1944; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, the President of the Senate, and the Speaker of the House of Representatives.

Approved by 58th National Encampment, Veterans of Foreign Wars of the United States, Miami Beach, Fla., August 25–30, 1957.

Disguised as Freedom Fighters

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. BURNS of Hawaii. Mr. Speaker, during the 1st session of the 85th Congress, I introduced H. R. 4189, a bill to admit 10,000 orphans into the United States.

Through the hyperopic view of my dear friend, the Honorable FRANCIS E. WALTER, of Pennsylvania, this and other perplexing immigration questions are readily resolved. I am certain that millions of freedom-loving people all over the world join me in expounding the deeds of one of America's foremost statesmen.

I am pleased to include for printing in the RECORD an editorial from the Honolulu Star-Bulletin of August 26, 1957, which is of lasting interest.

The editorial follows:

DISGUISED AS FREEDOM FIGHTERS

At the time of the Hungarian uprising last October and November the free world's sympathy flowed out to the freedom fighters.

These heroic men and women boldly stood up to their Communist overlords, then flew for safety abroad when the Russians brutally put down the revolt with hundreds of tanks, thousands of cannon, more than 200 bombing and strafing planes and massive, cruel footsoldiers in many divisions.

The United States offered haven to thousands of these freedom fighters in excess of normal immigration quotas on a parole basis.

So far, Congress has shown little disposition to lift the parole and certify these refugees as bona fide immigrants.

One of the reasons for Congress's reluctance is the disclosure that at least one and possibly more of these freedom fighters are hoaxes—they are Red spies posing as refugees.

An admitted former Soviet Russian Army captain who entered the United States with his family disguised as a freedom fighter is now being deported. Under the law such persons may be deported without the filing of a formal charge so long as they remain on parole.

At the time of the Hungarian uprising and while refugees were streaming through gaps in the Iron Curtain, Representative FRANCIS E. WALTER, of Pennsylvania, went personally to the Hungarian border to observe the operation. He went with open mind, open eyes, and sympathetic heart.

He warned then that although most of the refugees were, in truth, fleeing freedom fighters, it was probable that among their number would be spies, provocateurs, and agents of the Soviet Communists.

Whether the former Russian Army captain, Jyula Paktorovich (now nabbed), actually acted as a spy or a Soviet agent has not been disclosed by American officials. Probably he has.

And chances are there are others who slipped in as freedom fighters who this very minute are plotting and conspiring with the Communist apparatus in this country to overthrow our Government.

Representative WALTER is to be commended for his foresight in warning that refugees seeking admission to the United States should be carefully screened.

He is to be commended also for being among the congressional leaders who refuse to be hurried into granting legal residence to freedom fighters among whose number may be spies and enemy agents, yet who by their sympathy and practical aid, help keep alive the still-burning fires of freedom behind the bloody Hungarian curtain.

Republican Money Policies Versus Small Business

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. PATMAN. Mr. Speaker, anyone who questions the administration's money and credit policies is promptly labeled an "inflationist." Since the first great "crusade," our Republican friends have somehow established—at least in their own minds—that they are the party of sound money, while the Democratic Party is the party of inflation.

Actually, the record shows that just the opposite is true. From the very beginning of World War II through the Korean hostilities, the Republican Party, the Republican press, and the Republican Members of the House waged a bitter and highly vocal fight against all of the measures that were adopted in these years to combat inflation. Our Republican friends fought last-ditch battles against price and rent controls, against rationing, and against allocations of production materials and against all of the other measures designed for keeping prices down during the periods of shortages. And at the same time they opposed adequate taxes to sop up purchasing power and to check the rise in the Federal debt.

Indeed, unless my memory of the last two decades is completely faulty, the only policy offered in the name of combating inflation that has received enthusiastic support from the Republican leadership, and from the great majority of Republicans in this body, is the present administration's tight-money and high-interest policy. Certainly, the Republican leadership has not otherwise followed an anti-inflationary course, even since it acquired control of the Government and presumably became "responsible." As soon as this administration took office it set about making tax concessions to high-income families and giving all kinds of tax bonuses to the big corporations. And it has created both the framework of Government and the attitude of Government which has been favorable to the repeated big-business price increases which are continually increasing the cost of living.

REPUBLICAN RECORD HAS NOT BEEN ANTI-INFLATIONARY

Our Republican friends' single effort at combatting inflation is, to say the least, of doubtful value in restraining inflation. Both logic and experience suggest that the tight-money high-interest policy is causing prices to go up, not down. Curiously enough, however, the tight-money high-interest policy does result in more interest income for the bankers and big investors; and it is resulting in the big industrial corporations gaining greater monopoly control over markets, with less threat of competition from small businesses.

When this administration took office at the beginning of 1953, the cost of living had been almost completely stable for 18 months. Yet the administration immediately embarked upon a high-interest tight-money policy for the purpose of stabilizing prices. The Treasury and the Federal Reserve Board have been coordinating their actions in pursuit of this policy, with increasing dosages of high interest, ever since. It is true that these agencies backed away from the policy in late 1953 and early 1954, after an overzealous application of the policy brought on a business recession, but the country's reprieve was quite brief. Late in 1954, the money managers were on a new spree of raising interest rates, only to find with each increase in interest rates there was a further increase in industrial prices. For many months these mounting industrial prices were not reflected in the cost of living, for the simple reason that the props were being pulled from under farm prices and farm prices were falling correspondingly. But when farm prices finally sank to the new floor, the cost of living index started rising; it has now risen for the 12th consecutive month—to the highest level in history.

Where do we stand now? Interest rates have been raised to the highest level since the bank holiday of 1933, yet the chairman of the Federal Reserve Board is calling for even tighter bank credit, and the Secretary of Agriculture, Mr. Benson, is calling for even lower farm price supports.

Now to question this administration's policies does not mean that the questioner is in favor of inflation. Obviously, there are times when the Federal Government should conduct its affairs so as to counter inflationary forces; there are times when Federal policies should be calculated to counter deflation and depression; and there are times to be neutral.

HOW DO WE HAVE INFLATION WITHOUT SHORTAGES?

The pertinent question today is therefore: Are we in a period when anti-inflationary measures are appropriate? I say, "no," certainly not the kind of

measures that are being used for the purpose.

It may be true, as many people say, that some new kind of Government machinery is needed to restrain price increases in those industries where monopoly power has been acquired, and prices can be raised arbitrarily. But this is not a problem that is peculiar to a period of inflation; the monopoly power which can raise prices in times of inflation can be used, and is used, to raise prices also in times of depression.

As for the kind of inflation which comes from shortages of goods, productive capacity or labor—this has long since disappeared. True, the official spokesmen for "tight money" still think they can see such shortages at work. For more than 18 months now, the chairman of the Federal Reserve has been proclaiming that "too many dollars are chasing too few goods," and the recently retired Secretary of the Treasury, Mr. Humphrey, insisted too, that shortages are at the bottom of the price increases.

Several committees of Congress have been asking where, specifically, are these shortages to be found? Where are there shortages of materials? Where are there shortages of labor? And where are there shortages of plant capacity? The truth is that there are substantial surpluses of both goods and productive capacity in most sectors of the economy, but it is rather difficult to find any place where there is any shortage of either goods or productive resources.

The argument about shortages should have been exploded by now. The chairman of the Federal Reserve System has been invited again and again to point to some specific shortages which he thinks he sees. He has finally agreed that he can point to no specific shortages of any consequence. On August 1 of this year, he finally told the Committee on Banking and Currency of the House that there are today no basic shortages. He said:

> Now the problem today, as I see it, is that we have had a high level of activity for some time, and there are no basic shortages in the economy with the exception of the shortage of savings, but this high level activity is at inflated prices.

Yet, while Chairman Martin has finally agreed that there are no specific shortages, he now maintains that there are shortages in general. He told the Senate Finance Committee, on August 13, that—

> As a nation, we have been trying to spend more than we earn through production.

In other words, we are now being given a theory that the total is bigger than the sum of its parts. With all due respect for Chairman Martin, I say that his thesis is nonsensical.

In such an economic system as ours, it is, of course, possible to purchase more than is produced—for a brief period of time. But such a period of dissavings would come about only when the Nation's store of business goods is being used up faster than it is being replaced. Manufacturer and retailer inventories have been increasing, not decreasing. And new productive equipment is being acquired at a phenomenal rate—an estimated $37 billion per year—which must certainly be greater than the rate at which existing plant and equipment is being worn out or becoming obsolete.

CAN CONSUMERS CREATE BIG-BUSINESS COMPETITION?

Under these circumstances it is both foolish and misleading to say that the Nation is trying to buy more than is being produced. It would be more to the point to recognize that the big-business industries are trying to sell what they produce at higher and higher prices.

But the official explainers seem to prefer to go anywhere and everywhere, except to the point. After many months of being treated to a propaganda line which has strongly suggested that labor has been responsible for the increasing prices, we are now treated to a shift in emphasis which, of all things, blames consumers for the price increases. Faulty diagnosis of the disease will not lead to a cure, but to bad treatment. Thus, as I see it, the President's new call for action, which is to admonish consumers to buy wisely—not to go on a buyers' strike, but to shop around and avoid paying foolish prices—involves the absurd notion that consumers should take on the burden of stimulating competition among the Nation's suppliers, while the administration pursues money and credit policies that bring about a state of competition which gives consumers even less protection.

TIGHT MONEY IS THE WRONG CURE FOR THE WRONG DISEASE

But perhaps I misjudge the balance of inflationary forces at work today. Let us assume for a moment that inflationary forces are in the ascendency, and let us assume also, despite all of the evidence to the contrary, that the increases in interest rates, which add to the cost of the retailer, the wholesaler, the manufacturer, and the raw materials producer, have not been multiplied and reflected in consumer prices. Let us assume further that the present tendency of big business toward high-price and low-production policies is not encouraged by the tight-money squeeze on consumers and small business. In short, let us assume—contrary to all appearances—that some active measure for combating inflation is actually needed. Making these assumptions, then let us ask what is wrong with the tight-money high-interest method of fighting inflation?

I say that everything is wrong with this method of fighting inflation. It benefits no one but the bankers and the big investors, it has unwholesome effects on the Nation's education and health, and it involves discriminations and distortions in the economic system which will bring about more monopoly control and more high prices.

In the first place the high interest rates—which are claimed to be a necessary part of tight money—are causing the greatest cutback in the very activities which are most needed. These are the activities of building schools, building homes and building hospitals, and building other badly needed State and municipal facilities. The high-interest rates have simply priced out of the market much of the activity of these kinds. It is in these activities that the effect of increased financing costs are most clear; and it is in these activities that the cure is at least no better than the disease.

TIGHT MONEY SQUEEZES SMALL BUSINESS—HELPS BIG BUSINESS

But within the business system itself tight money does make a vital difference. The tight-money policy is rapidly weakening and undermining the position of small business. Yet this policy has little, if any, effect on the volume of capital available to the big corporations; it has not even succeeded—if it were intended to succeed—in dampening the big corporations' recordbreaking capital expansion. In short, the policy affects the big corporations not at all, except to promise them a future of more secure control over markets with less rivalry from small competitors. The reasons for this are not hard to trace.

In the first place, the mechanics of the tight-money policy are to limit the growth of commercial banks' credit. This means that the credit squeeze is put on about the only source of capital available to small firms.

The big corporations can still sell stock, issue bonds, and borrow from the insurance companies and the investment bankers. But these sources of capital are not, as a practical matter, generally open to small firms.

Furthermore, not only has bank credit been limited, but the high-interest policy has caused the big corporations to shift their credit demands on to the commercial banks, and thus to cut into the credit supply which would otherwise be available to small firms. According to the press reports, managers of many of the big corporations are not convinced that the new high-interest rates on bonds and other long-term debentures can be made to stick. Consequently, the big corporations with expansion programs are turning to the commercial banks for temporary financing, hoping to postpone permanent financing until interest rates come down again.

Thus we are told that the banks are in a position of having to ration a limited supply of credit among small and large borrowers—and, of course, there have been some claims from the bankers that they are rationing fairly, and taking care of their small-business customers as a matter of policy. Why would we expect the banks to ration a supply of credit to small borrowers, when the big corporations, the banks' biggest depositors, are demanding the same credit—any more so in a period of tight money than in normal periods of easy money?

The truth of the matter is that the rationing of bank credit is not new or peculiar to periods of tight money. If it were, we would have to find that the bankers have adopted a new way of doing business and acquired new motivations in place of their normal motivations. Actually, the supply of bank credit is never allocated by the price of money. But, as we know, the banks set interest rates and then choose between the applicants at predetermined rates. Bank interest rates then are a matter of

convention, determined by current notions of what is proper and ethical and, particularly, by what the Federal Reserve System is willing to agree to.

TIGHT MONEY AND HIGH INTEREST ARE SEPARATE POLICIES

It is for the very reason that there is no direct and necessary connection between the supply of bank credit and interest rates that the Federal money-managers could have tightened bank credit, had they cared to do so, without raising interest rates. This has been clearly recognized by the Federal Reserve System over the years past whenever the System wanted to loosen credit. On these occasions the Federal Reserve did not reduce interest rates, as a means of increasing the credit supply, but it reduced required bank reserves. For example, in July 1953 and again in June of 1954, when the money-managers had a temporary policy of loosening credit, the Federal Reserve did not reduce interest rates, it reduced reserve requirements of its member banks. This meant that each dollar reduction in reserve requirements was a dollar freed for lending; and under our fractional-reserve banking system, it actually meant that the banks could lend up to $6 for each dollar reduction in required reserves.

Since each time the Federal Reserve System wanted to loosen credit, it reduced reserve requirements and thus made more money available, why, we might ask, has it not raised reserve requirements on any of the dozen or so occasions in the past 2 years when it has acted to tighten credit? The record shows that on each of these occasions the Reserve System has either initiated a general rise in interest rates by raising the Reserve banks' discount rate, or it has shown a ready willingness to raise the discount rate immediately after 1 or 2 big banks announced a raise in their commercial rates. In either case, the results are the same: all bank rates go up correspondingly with an increase in the discount rate—which demonstrates a remarkable instance of the tail wagging the dog. The Reserve banks' loans, discounts, and advances outstanding—in short the amount of credit on which the discount rate applies—amounts to less than 1 percent of the commercial banks loans outstanding.

The tight-money policy and the high-interest policy would not therefore seem to be directly connected, except for the possibility that our Federal money managers may have felt that the high-interest policy would be fair compensation to the bankers for their accepting the tight-money policy. Or possibly the tight-money policy has been advanced only as an excuse to justify the high-interest policy. These observations are arguable, of course, but certainly the great majority of the banks very much like the net result of the two policies. Indeed, the banking community has taken the lead in demanding and propagandizing for these policies.

TIGHT MONEY HAS THE EFFECT OF REPEALING ANTITRUST LAWS

Under the tight-money policy, the volume of loans outstanding to small business has probably not declined. On the contrary, it is probable that there has been some expansion in the volume.

But those of us who have been especially concerned about a continuing place for small business are not concerned merely with whether the small firms already in business will survive. A proper perspective of the values at stake require that we be concerned also over whether there is a continuing opportunity for new small firms to be created and for small firms to keep pace in the tremendous expansion of business capacity now taking place. It is against the backdrop of the tremendous expansion of business capacity now taking place—all of which requires capital—that we get the import of the tight-money squeeze on small business.

Prof. Kenneth Galbraith, of the Harvard School of Economics, recently caught the import, and he summed it up this way:

> We should recognize that monetary policy as it is now being practiced is a magnificent instrument for promoting centralization. A move at the present time to repeal the anti-trust laws would, without doubt, excite considerable opposition. But it might contribute less markedly to industrial concentration than a long continuation of monetary restraints in their present form. These deny to the smaller and weaker firm the funds on which growth or even survival may depend. The large and the strong tend to get them. The consequences must be clear.[1]

Such ideas as these expressed by Professor Galbraith are, of course, quite contrary to the impression that some of the big bankers, and the banker associations have tried to give by the various speeches, reports, and so forth, which they have been circulating. These bankers have been trying to knock down all criticisms of the tight-money policy and hence have felt it necessary to assure the public that big borrowers really are not in any favored position, when it comes to obtaining bank credit, but that the banks are all judiciously dividing up their limited credit so as to give small borrowers at least a proportionate share. Noting these banker statements, Professor Galbraith remarked in the same article, that—

> In recent months commercial bankers have been sensitive about the suggestion that the smaller and weaker borrowers have been losing out. Some have come perilously close to claiming that their least valued clients get their first consideration.

NEW CLAIMS THAT BANKERS FAVOR WEAKEST CUSTOMERS

None of the bankers, to my knowledge, has made any direct or outright claim that they are showing a preference for their least valued and least influential clients. But recently they have found a college professor who makes the claims for them.

Recently I received a letter from the public relations department of the American Bankers Association enclosing a paper titled "Monetary Policy, Tight Money, and Small Business," by Prof. R. G. Thomas, of Purdue University. The publicity man's letter assures me that because of my interest in small business I will be interested in the contents of Professor Thomas' paper, a paper which not only argues a justification for the tight-money policy in general—on the grounds of excessive pressure upon the productive capacity of the country—but concludes that small business has not been "the victim of tight money discrimination to the advantage of the large business firms."

Since I suspect that other Members of the House have received copies of that paper, I would like to take a few moments to point out what seems to me the technical weaknesses in the facts and arguments which led Professor Thomas to conclude that small business has not borne a disproportionate burden of the tight-money policy.

Specifically, the factual basis for the professor's conclusions consists of certain extremely skimpy statistics pertaining to the very small commercial banks and to the very large commercial banks. No reference is made, and no statistic is offered, bearing on the question of whether the banks in the size range between $10 million in deposits and $250 million in deposits have increased or decreased their loans to small business in the tight-money period.

According to a survey made by the Federal Reserve Board of its member banks in October of 1955, banks with between $10 million and $250 million in deposits accounted for 57 percent of all the member bank credit extended to business firms having assets of less than $50,000, and such banks accounted for 56 percent of the credit extended to borrowers having assets of less than $250,000.

Nevertheless the professor draws conclusions about the effects of tight money on the lending of all commercial banks, even though the facts are missing for banks which supply about half of the small-business credit.

SMALL BANKS LEND TO BIG BORROWERS

What about the smaller banks? According to the Federal Reserve survey, member banks having less than $10 million in deposits supply between 26 and 32 percent of the member-bank credit extended to small firms. The professor reasons thusly: Since banks with less than $10 million in deposits usually cannot, as a matter of law, lend more than $100,000 to a single borrower, then—

> Clearly these 11,500 banks must lend mainly to the small, local business firms and even if they wished they could not discriminate in favor of big business against the smaller firms.

That conclusion is clear only because it overlooks certain important facts. First, the legal limit refers only to the amount which a bank can lend to a single borrower; it does not limit the amount which a big borrower can borrow from a number of different banks. It is common practice for big corporations to maintain multiple banking connections, and to split their borrowings among the banks.

Second, it is common practice for the small banks to have their loans made for them by larger, correspondent banks, in which case they usually participate in pool loans to large borrowers. It is by

[1] Are Living Costs Out of Control? by John Kenneth Galbraith, the Atlantic Monthly, February 1957, p. 40.

way of indirect payment to the larger banks for service in placing loans that small bankers keep funds on deposit, interest free, with the larger banks.

So much for the facts and the arguments about the smaller banks and the medium-size banks—banks which together supply about 70 to 75 percent of all the small business credit. The statistics cited by Professor Thomas reveal nothing. They do not tell us whether these banks made more or less credit available to small business, in a period of tight money, nor do they indicate whether big firms have obtained more or less credit from these banks.

BIG BANKS LEND TO BIG BORROWERS

What now about the very large banks? For his facts on this subject, Professor Thomas leans on a survey conducted by the American Bankers Association covering 78 of the Nation's largest banks. The survey made comparisons for August 31, 1955 and August 31, 1956, a period when bank credit was being tightened. This survey indicated that the 78 of the Nation's largest banks increased their loans to small business—or at least their business loans in small amounts— in this period of tightening credit. Specifically, the survey indicated that outstanding loans in amounts of less than $50,000 increased by 14 percent within the year, and that outstanding loans in amounts of less than $100,000 also increased by 14 percent.

These facts greatly impressed Professor Thomas and led him to assume that there had been a 14-percent increase in all small business loans, a percentage which he proceeded to compare with a 5.5-percent increase in the gross national product for the same period.

A 14-percent increase in the dollar amount of loans to small business during a period of tight money certainly does not appear unreasonably restrictive in the face of an increase of only 5.5 percent in the gross national product for the same period.

As the reports of the House Small Business Committee have pointed out, however, the volume of small business loans extended by the 78 biggest banks is in no sense a measure of whether commercial banks as a whole have extended more or less credit to small business. The 78 top banks in the ABA survey are in no sense typical of the banks from which small firms obtain credit. Among other things, the smaller banks lacked the foresight exercised by the big banks in unloading their Government bonds, before the price drop, thus acquiring added loan funds. Turning again to the Federal Reserve survey, we find that the 97 biggest banks—those having deposits of more than $250 million—accounted for 77 percent of all the business loans outstanding; but they accounted for only 25 percent of the loans outstanding to firms having assets of under $50,000; and they accounted for only 30 percent of the loans outstanding to firms having assets of under $250,000. Clearly the Nation's biggest banks are not the main supply of credit for small firms.

ABA'S STATISTICS OMIT COMPARISONS

How, then, we might ask, did the ABA's 78 very untypical banks' increased lending in small loans compare with their lending in large loans? Did the total business loans of these banks go up more or less than 14 percent between August 1955 and August 1956? Unfortunately, this is a fact that the ABA report neglected to supply, although it is the one easy fact that such a survey is automatically expected to supply.

BIG FIRMS GET CREDIT AND EXPAND

Professor Thomas' paper does, however, make reference to published Federal Reserve data which bears on the subject. These data show that in the same period when small-business loans of the 78 top banks increased 14 percent, total commercial loans made by central Reserve city banks—New York and Chicago—increased by 28 percent, and total commercial loans made by Reserve city banks—49 cities—increased by 18 percent. In light of these facts, Professor Thomas poses the question, "Does this not indicate that the big borrowers in the big cities were under less restraint than were the small borrowers?"

And in answering his question, the professor shifts the grounds of his argument. He observes that "the relatively greater increase in loans to big borrowers by the big city banks does not necessarily mean that these borrowers were not subject to credit restrictions," because "the pressure on large business for loan accommodation was probably greater than on the smaller firms."

And why was the "pressure for loans greater on large firms"? Principally because "many of these firms, with expansion plans under way, found the long-term capital markets unappetizing because of higher interest rates and turned to the big city banks for temporary financing."

In other words, the firms which are expanding most need to raise the most capital—which is what the critics of the tight-money policy have been saying all along, except that we have added two pertinent facts. One, the firms that expand are the firms that can obtain the capital for expansion. Two, while the long-term capital markets may presently seem merely "unappertizing" to the big corporations, these markets at all times are closed to small firms, so when the big corporations shift their capital demands onto the commercial banks they are taking up the only credit normally available to small business.

COST OF BIG FINANCE POLICIES IS TOO HIGH

Sometimes I think the country is paying too high a cost for having too much big banker and big business control over the Government. When we fight inflationary forces that do not exist, by methods that increase prices, the cost is too high. When we have a high interest policy which flattens the bankers at the expense of sacrificing needed schools, hospitals, and homes, the cost is too high. When we have a tight-money policy that weakens small business, weakens competition, and weakens consumer protection, the cost is too high.

Foreign Trade and Foreign Policy

EXTENSION OF REMARKS
OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the Foreign Trade Club of the Greater Providence Chamber of Commerce.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the Foreign Trade Club of the Greater Providence Chamber of Commerce, and guests, it is a pleasure for me to be with you here this evening and to be given this opportunity of speaking to you, especially on matters which are of particular interest to your group.

Thomas Macaulay once said: "Man is so inconsistent a creature that it is impossible to reason from his belief to his conduct, or from one part of his belief to another." As evidence of the accuracy of Mr. Macaulay's observation, I offer the following lively example:

Some years ago a public-opinion poll showed that a substantial majority of the people of this country favored the reciprocal trade agreements program. A second poll, conducted at about the same time, revealed that a majority was against lowering tariff barriers to imports of foreign products.

To you people interested in international trade, I need hardly point out that these two polls reflect at least some slight inconsistency in the attitudes of the people of the United States. As a writer, Mr. Macaulay might dismiss this inconsistency with a wave of his pen. A Senator is not in the same situation. He exists, along with ministers and psychiatrists and judges, not only because man is frequently inconsistent with himself but also because there are substantial inconsistencies among men. The Senator's job is largely to understand these inconsistencies and to do what he can to reconcile them through legislation.

The inconsistency in public attitudes toward foreign trade, as reflected in the two polls I mentioned, is the one to which I want to direct your attention tonight. There is little point in ignoring this inconsistency. There is much to be said for recognizing that it exists. There is much more to be said for seeking to deal with it through foreign policy as well as in other ways.

If we examine the implications of the two polls, I believe we find that they add up to this: The people of the United States generally believe that foreign trade is a good and helpful thing for this country. At the same time, many of them have reservations about one aspect of it—imports. They may even approve of that aspect in the abstract, but they are, not infrequently, downright suspicious of it in the specific case. They are suspicious of imports as something which may hurt them or even the country as a whole.

Those of you who are especially interested in this matter will fully appreciate the fact that a foreign trade cannot flourish without both exports and imports. We cannot dismiss the inconsistency to which I referred, however, as merely an attitude of the uninitiated. Some of you who are jewelry man-

ufacturers or textile producers may well share it.

Rather than dismiss it, I believe we ought to try to see what lies beneath the inconsistency. What are the realities of foreign trade which tend to produce it? Why do we both love and hate this trade at the same time?

We can begin, I believe, by noting that foreign trade, as a general proposition, is a good and helpful thing for the country, and most of us recognize it as such. The reasons for this attitude relate directly to the well-being of the Nation. They are to be found on both the export and import sides of the foreign-trade coin.

On the import side, this Nation is consuming various raw materials at a fantastic rate in order to maintain our present high standards of living. Ten percent of these materials now come from abroad, and conservative estimates indicate that this percentage will double by 1975.

Ten percent may not appear to be a very significant proportion of our total raw material requirements. However, if we divide this total into its components, we find that our dependency on imports of certain strategic commodities is very great indeed. At the present time, for example, we import 50 percent or more of our total needs in chromite, tin, manganese, tungsten, wool, cobalt, and bauxite. By 1975, it may well be that copper, lead, and zinc will be added to this list and iron ore will not be far behind.

In addition to these strategic items, we import substantial amounts of many other products which are highly useful in keeping the wheels of our industrialized society turning. We also obtain from abroad thousands of other products which, while they may not be absolutely essential, certainly serve to add a little extra to the comfort of our lives. Few of us here today, for example, failed to set out this morning without coffee from Latin America or tea from India or Ceylon. Some of us, moreover, find pleasure in a work of art imported from the Orient, Europe, or Africa. Others like to move about the streets in a British or Germany automobile or on an Italian motor scooter, rather than in a streetcar or on foot. Even though I do happen to be a member of this automotive avant-garde, I can understand the sentiments of one who is a member.

The examples I have cited could be multiplied many times. The point I am trying to make, however, should be clear. It is this: Imports are essential to the highly developed economy of the United States, and they are a significant element in the richness and diversity of our daily life. They are also a substantial factor in employment. One conservative estimate I have seen, places the total number which stem directly from the processing, transporting, and distributing of imports at well over a million jobs.

Public awareness of the importance and benefits of imports—in the sense that I have just been discussing them—is growing in this country. That may be one reason why foreign trade, as a general proposition, is looked upon with increasing favor here. So much for imports.

How about exports? Of course, they have long contributed to building a favorable attitude towards our trade abroad. Except in times of temporary shortages at home or when they take the form of foreign aid, there has been little disagreement on the part of the public as to the desirability of expanding the Nation's exports to the maximum possible extent. This attitude has deep historical roots. You will recall that Congress is expressly forbidden by the Constitution any power to levy a tax or duty on exports.

This favorable attitude toward exports also has a very practical modern application. Exports are a major source of profits and employment. We can obtain some idea of the importance of exports to our prosperity if we consider that over 3 million jobs are directly dependent on the export trade. Our export sales abroad are larger than the sales of the automobile industry in this country. Nearly 11 percent of the production of our soft coal industry is sold abroad; and about 5 percent of our output of synthetic textiles. As for major farm products, more than 25 percent of all the wheat, rice, cotton and hops is exported.

Without export markets many businesses in the United States would be forced to close their doors; others would find themselves with severely curtailed profits. We would be confronted with a widespread unemployment problem. Agricultural surpluses would overwhelm us.

As in the case of imports, so is the case of exports. I could cite hundreds of specific examples of their importance to the national economy. There is neither the time nor the need to do that, especially with you people here this evening.

Let me place this importance, however, in a broader perspective. I suppose that if our foreign trade were suddenly stopped completely—both imports and exports—this country would not collapse in an economic sense, although we would suffer a major dislocation. In time, inventive genius might conceivably develop substitutes for essential commodities which are now imported. We might stimulate production of marginal domestic sources of raw materials, at high cost. We might find substitutes for coffee and tea. People now dependent on foreign trade might find other jobs or other businesses

While we might survive a drastic change of this kind, one thing is certain. The price of survival without foreign trade would be a sharp drop in our standard of living and the elimination of the so-called extras, which have added variety and flavor to our lives.

What would be to us a major dislocation, would be to other free nations an immediate and unmitigated disaster. Foreign trade, profitable to us, is vital to them. That is especially true of the nations of Western Europe. Without trade they would be confronted, not only with a drastic decline in living standards, but even with actual starvation. There do not exist in Western Europe the basic natural resources for decent survival without extensive worldwide trade, including a substantial trade with us. The nations of that region are deficient in fiber, fuels, and raw materials. They can make up these deficiencies only by imports from abroad. They can obtain these imports only in the form of aid or by paying for them with exports of the goods and services of their own advanced economies.

Under the Marshall plan, Western Europe did receive, in effect, a substantial portion of its imports in the form of aid from this country. In recent years, however, the Europeans have paid for these imports out of the products of their industries with their highly skilled services. Such aid as has continued to go to Europe since the Marshall plan terminated has been largely in the form of military equipment to provide for the common defense of the Western World.

The economies of Western Europe are now operating at record levels. The Europeans have reached these levels and are maintaining them largely as a result of a vast expansion in trade with each other, with us and with other free nations. However, in spite of the great increase in their productivity, their trade and their consumption, Western Europe generally has little reserve to meet an economic catastrophe. It can ill afford any recession in trade. That such is the case is illustrated by the effect of the blocking of the Suez Canal last year. This incident was, in effect, an example of a major interference with international trade, not unlike what would happen if imports and exports were drastically curtailed as a result of Government policies on tariffs. It compelled Britain to seek a postponement of payments on the loan which we had made to that country in 1946. In short, without trade there would have to be aid. Had Suez remained closed for any length of time, not only Britain but most of the other nations of Western Europe would have been in deep economic difficulties and would have had to seek our help.

The United Kingdom, and indeed any country worthy to be called free, is not happy when it is forced to seek aid abroad, and it does not please us to have to give it. Yet in this instance, as in others, we were confronted with a choice between economic assistance and economic chaos. We did what I believe most of you would have done. We chose to provide assistance. We did so because the political consequences of not doing so would have been so adverse as to jeopardize this country's vital security interests.

Unless Western Europe remains in economic health, and that, as I have noted, requires an extensive foreign trade—both exports and imports—the whole system of cooperative defense of freedom is threatened. Yet, it is on that system that the security of this Nation ultimately depends. No matter how high and at what cost we build our defenses, the United States can hardly survive as an isolated island of liberty in a sea of totalitarian hostility.

So much, then, for the advantages of foreign trade. It brings this country both economic and political benefits of great magnitude. The favorable disposition of this country towards foreign trade as a general proposition in all probability arises from an awareness of some or all of these benefits.

Why, then, is there still suspicion of import trade on the part of an important segment of this country? Why are Members of Congress so frequently urged by various citizens to do something to curb imports? The reason, I believe, is this. While foreign trade is clearly of benefit to the Nation as a whole, that does not preclude it from working a hardship in specific localities, specific industries and specific classes of workmen within the United States. I need hardly remind you that here in Rhode Island we are not unfamiliar with this phenomenon. We have been, for example, adversely affected by jewelry and textile imports from Japan. I have received numerous letters from citizens of the State dealing with the situation, and needless to say I have made efforts to cope with this problem.

I have done so because it is small comfort to tell a businessman whose firm faces insolvency as a result of foreign competition, that this state of affairs is good for him because it is good for the Nation. I have made these efforts because I do not like to see workmen lose their jobs as a result of this competition.

I suppose if I were callous enough I might tell the workman to get another job and the businessman to get into another line or retire. However, having no desire to do either myself, I do not feel that I can offer such advice with good grace. Furthermore, such advice as to changing jobs or changing lines of business is advice more easily given than followed.

It seems to me that, if a businessman operates his business efficiently and a workman is conscientious and productive, neither ought to be victimized by changes in Government policy or other factors which might tend to bring on a sudden rise in imports. It is all very well to talk about the general benefits of imports, but for some, they are not a benefit at all. Some of our citizens are being asked, in effect, to bear a disproportionate share of the burden of what is admittedly of value to the entire Nation.

If they resent this inequity, it is understandable. If they appeal to their Senator to do something about it, it is certainly understandable. And if their Senator tries to do something about it as I have tried to do in regard to Japanese textile imports, that, too, is or ought to be understandable.

For me to take this attitude does not men that I am opposed to foreign trade or that I am unaware of the economic and political value of imports as a part of that trade. It means, simply, that I do not believe foreign trade can be measured in this country, any more than in any other country, in purely economic terms. There is a human side to it which should not and must not be ignored.

Certainly our economy is not static. Businesses are constantly coming into or going out of existence; and they frequently alter their lines of production. Workmen shift jobs. Many factors go into this process of economic change, and foreign trade is one of them. I believe it is the duty of government, however, to see to it that change does not come so rapidly as to create major dislocations. It is also a duty of government to see to it that the burdens of change do not fall inequitably on any particular locality or segment of the population. This is particularly the case when change is the result of a Government policy designed to benefit the whole Nation.

So I would suggest to you who are especially interested in foreign trade, that you devote continued study to this problem. It seems to me that clubs like yours may make a great contribution to the expansion of international trade if you offer constructive suggestions on how to cushion the shock of change that is felt in particular industries and areas as a result of a sudden rise in imports. You know, of coufse, that some devices already exist for this purpose. There is, for example, the so-called peril-point system which calls for action by the President to curb imports in some instances. By diplomacy, we have also induced the Japanese to set up voluntarily quotas on certain textiles which they export to this country. I am not satisfied, however, that existing devices are sufficient. They have certainly not been sufficient insofar as this State of Rhode Island is concerned. If you have any advice on the matter, therefore, I would be delighted to receive it. It seems to me that effective devices for cushioning the changes and equalizing the burdens of foreign trade will do a great deal to stimulate the greater acceptability of this trade—in all its ramifications.

Even more important, however, than devices for easing changes, is an effective foreign policy. If a foreign policy is such as to encourage an expanding volume of trade, its benefits will be spread more broadly within this country and the adjustments and transitions which result from this trade will be made much easier. In this connection, the Marshall plan and the point 4 program of technical cooperation are both examples of highly effective measures of foreign policy. Not only did the Marshall plan save Western Europe in a political sense, it also contributed to a vast increase in our trade with that region over the past decade.

As for the point 4 program which I have seen in operation in all parts of the world, it is laying the groundwork for expanded trade and investment opportunities with respect to the less-developed countries. The effects of this program on trade are already visible in Latin America. In that region, it has helped in many ways to increase productivity. As a result, the Latin Americans are better and more reliable customers for our products than ever before. They, in turn, are able to sell us more of the commodities we need. There is every reason to believe that the point 4 program is proving beneficial in a similar fashion with respect to the Far East. As for Africa, which I visited last year, I believe that the technical cooperation program is likely to provide an important key to this great trading area of the future.

Foreign policy which can stimulate trade can also multiply the problems of foreign trade. An example of this has been the embargo on trade with China. This was a necessary and inevitable measure while the conflict in Korea was in progress. It was continued after the truce was reached in 1953. Whether in the long run it has helped or hurt the Peking government, only time will tell. In any event, a total embargo on trade is still maintained by this country on the China trade. Most allied nations went along with our policy to the extent of enforcing an embargo on strategic goods until a few months ago. But now the embargo has been relaxed by our principal allies except for actual materials of war.

While the application of the embargo was necessary a few years ago from the point of view of national security, the fact remains that it did tend to divert Japanese trade and, to some extent, the trade of European countries from long-established channels on the Chinese mainland. It is logical to assume moreover, that it also had the effect of intensifying the drive of these countries to increase their exports to this country.

To the extent that interference with trade by our Government is essential to the Nation's security, we must and will accept it. This policy, however, should be kept under close and continued scrutiny.

The question is, of course, one which the President and the Secretary of State are better equipped to deal with than I am. They have all the facts, or should have them, and they know that one of the foundations of a genuine peace is trade with other nations.

All matters relating to foreign trade will, no doubt, be discussed when the resolution providing for an extension of reciprocal trade is under consideration at the next session of Congress.

I thank you heartily for letting me address you on this subject which is near my heart.

The Status and Future of Agriculture

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. HILL. Mr. Speaker, under leave to extend my remarks I place in the RECORD a speech made in Pennsylvania last fall by Reed Benson, son of the Secretary of Agriculture, in which he discusses the status and the future of agriculture:

I have certainly enjoyed the program thus far this evening—the entertainment. I come from a singing family. I have 4 sisters who form a very beautiful quartet—Barbara, Beverly, Bonnie, and Beth—4 B's. Although I'm not a married man, I have helped burp, change, and paddle them—every one. With my brother and I and dad and mom, we have a fine family group.

I learned some very basic lessons, when I was overseas a number of years ago, because I happened to be in a country that went down the road to State regimentation and planning. And as a result of what I saw there I became a little anxious and concerned about my own country because when I came home I found a few of the seeds of regimentation and socialization being sown here.

This was a few years ago. But I found out and I jelled in my mind a few lessons I thought were very basic and I'd like to pass them on to you tonight because the truth bears repetition.

The first lesson I learned was what Old Ben Franklin said about 200 years ago and he was absolutely right—that any body of people that keep giving up their liberties in behalf of so-called security will eventually get neither liberty nor security. That was the first lesson.

The second lesson was that you can't permanently help a body of people by doing for them what they could and they should do for themselves.

And the third and the fourth lessons were just as basic—that you don't strengthen the weak by weakening the strong and you can't build character by taking away man's initiative and his independence.

When I learned those lessons I found they began to jell themselves into kind of a political philosophy. Oh, I nearly left out the fifth lesson—we kid about it in our family—that New Deal or Fair Deal socialism—or shall I say just socialism—will never work except in heaven, where you don't need it, or in hell where you've already got it.

And in passing before I tell you about that I'd just like to briefly say this. We've come to learn the President—come to appreciate—learn to know the President a little more than we did before. I'd just like to say this in passing. I think he's a man of character. And you know folks where there isn't character in this life there isn't much that's worthwhile, because character is the one thing we make in this life which we take with us into the life to come. And you can educate a man all you want to and if you educate him without moral principles you just make him a clever devil.

So I pay tribute to that man and I think this country will be fortunate no matter which political party occupies the White House in the future, if in the future we may have in the White House men of the character and the caliber of our present Commander in Chief, Dwight D. Eisenhower.

Well, we went back to Washington in January of 1953. On what we discovered when we got there I'd like to brief you, because American people need to be reminded once in a while of what we inherited when we went back. We came into office in January of 1953 and when we came in we discovered first—we found the Department of Agriculture machinery for what we felt would eventually result in a regimentation of the rural people of America.

We found out when we went back to the Department in January 1953 that except for the peak of the Korean war in 1951 farm income had declined every year from 1947—every year. You remember that. And it continued to decline after we took office. But practically all of the decline that ever occurred, both before and since we took office, occurred under laws which we inherited from our predecessors—the wartime rigid price support laws which didn't go out of effect until this last fall's crop. May I say now, since we have gotten in the Eisenhower approach of some sound peacetime legislation, the farm prices, the farm index, the farm income has shown a rise now, the first rise since the Second World War without the impetus of a wartime economy.

We found out when we came into office that two-thirds of the decline in farm income occurred before we ever came into office. I've mentioned that practically all of the decline occurred under the laws we inherited from our predecessors while we have been in office and the sharpest drop in farm income occurred in the last 23 months of the Truman administration when the farm parity index dropped by 19 points.

We found out when we came into office that this wartime law, which was a high in-

centive to farmers to produce and produce and produce, was gradually building up surpluses. We had a $3 billion surplus on our hands when we stepped into office. Administrative action which had been started before we came into office under which a $6 billion surplus was to accrue, and close to $14 billion of food supplies were to move into Government hands under this same program which we inherited. Then we found that our predecessors did not invoke legal production controls to cut the farmers back in their production because they didn't think it was politically feasible to do it and so the surpluses began to accumulate and accumulate until we found out when we stepped into office we didn't have sufficient legislation on our books to get rid of the surpluses. All these things were handed to us the day we stepped into office. I tell you folks, it wasn't of our doing. We were handed a time bomb and we have been blamed because the explosion went off during our administration. We have been spending the last 3 years cleaning up the debris and putting out the brushfires of our predecessors.

I used to be a chaplain. I never thought I'd quote the Scripture in politics but it comes to the fore right now, one from the Old Testament that goes something like this: "The sins of the fathers have been visited upon the heads of the children." The fathers have eaten sour grapes and the children's teeth are still on edge. I'll tell you we inherited a mess—a real mess. And yet some men have had the audacity to toss us their dirty linen and then stand on the sidelines and point their fingers at us who had to catch it.

So what did we decide to do? We decided when we came into office that we'd conduct the broadest review of agricultural policy ever conducted. That we'd invite in the best brains of agriculture—the land-grant colleges—the farm experts, the major farm organizations—the bureau—the Grange—the Farmers Union—for their ideas, their suggestions—their help. We conducted the broadest review of grassroots policy ever conducted because we felt from the rural people of America scattered all over we could get more ideas and better and sound suggestions than any 2 or 3 men just sitting in Washington. And so when all the suggestions came in—and may I just say this—we didn't ask a man, not a single man what his politics were—not once did we ask one of those experts or those men what their politics were. Do you know why? Because agriculture is neither Democratic nor Republican. The land responds to both political parties. It's not right that agriculture should be used as a political football or that farmers have to be put on the political auction block and sold to the highest bidder—it's not right.

So when those ideas came in and those suggestions, we pulled out ideas that were economically sound and usable and helpful, and we drafted the Agricultural Act of 1954, which, bless the hearts of the Republican Congress and bipartisan support, the President was able to sign. This act got us back to a peacetime economy for agriculture. This act got us back to producing food for stomachs—not for storage. This act got us back to encourage farmers to produce for free markets, not Government bounty. This act got us back to the old law of supply and demand which can't eternally be violated without suffering some kind of repercussions. This act got us back to a little flexibility in price supports, to adjust them so we would be able to bring forth sufficient production for consumption—not more than we need. And folks, when we mentioned the word "flexible" you should have heard the howl.

Well, may I just say this about this flexible principle which Republicans have been championing. Flexible price supports are nothing new. Every Secretary of Agriculture for the last 20 years, while he has been in office, has advocated flexible price supports in peacetime. Even President Truman in 1948 sent a special message to the Congress pleading that we get back to flexibility in price supports now that we were in peacetime. Even in 1948 flexible price supports were a part of both political platforms. Even the Farmers Union in 1948 advocated flexible price supports. Then why the desertion of former principles. Under Eisenhower we got the peace. Now we wanted flexibility in price supports.

May I just give you a little background on this? When the Second World War broke out and the Government came out among the rural people of America and said to them, "Look, farmers, food will win the war and write the peace—produce." And to give the farmers the incentive to produce, so that we'd have enough supply on hand, they guaranteed them a high price on certain given commodities. They called them basic—basic commodities. I'm afraid there was a little politics in the selection of which commodities were basic. It's pretty difficult when you select certain commodities among all the commodities there are and call them basic.

So what happened. Anyway, the Government wanted production of certain commodities. And so they guaranteed them a high price. They set a high incentive level—a level of 90 percent rigid price supports to encourage farmers to produce. But what happened. When war broke out, the full scale of war, and the inflation that goes with war, where did farm prices go? Did they go to the floor that the Government had set—the high floor of 90 percent of parity? They didn't. Where did they go? They went to 100 percent of parity, 110 percent of parity, 114 percent of parity. They would have gone even higher had not Government set price ceilings on farm commodities. And so what brought farm prosperity during the war. Was it the 90 percent support, the rigid support of parity they talk about? It wasn't. That was the floor. And guess where farm prices went. They went way up to 114, and would have gone even higher. So what brought farm prosperity during the war? It was the war and the insatiable demands of war and the inflation that goes with and follows war, and yet, unfortunately, in the Democratic platform they drafted in Chicago, they say they are willing to take credit—willing, and they say they are going to take credit for the high farm prices enjoyed during the 11 years prior to the Eisenhower administration—the 11 years in which we had the war—the insatiable demands of war, and the inflation that follows war. Well, if that's what they are going to do now, I'd just like to say this. That any political party, group or organization that wants to take credit for the high farm prices during the war better take credit for the war also.

Well, the war is over. But the Congress did not have the moral courage after the Second World War to get back to a peacetime program for agriculture. Instead they continued those high incentive levels up there, and guess what happened. When the war ended and we had no need for all that food and fiber, the Government still kept that high incentive level. They passed a law to get back to flexibility, but they wouldn't let it take effect. They put it off. They didn't think it would be politically feasible so they put it off for 2 years. And they waited and put it off for a few more years, and then a couple of more years, like the drunk who is always going to repent tomorrow and tomorrow never seems to come. And so what happened, because they put it off and put it off?

Finally, when Eisenhower came into office he decided that somebody was going to have to pay the fiddler. And he decided it was time to pay him. During the war, the fiddler's wages had compounded and his interest had gone up, we had surpluses on hand—we were in a mess. And what happened when the Government continued those high incentives when we had no need for all that food and production?

Well, let me tell you. What happened to a lot of men when their Government guaranteed them a high price on a given commodity without regard to what the market would take, they'd guarantee them a price and if it piled up in Government storage, they'd still guarantee them a price. And guess who got into farming. The person with a good business head on his shoulders. When the Government would guarantee him a price on given commodities, he wouldn't stay out of it. He got into it to make a fast buck. Hope I'm not offending anybody here. But he got into it to make a fast buck. He got into it with a lot of other drugstore cowboys and suitcase farmers. And guess what happened. They started producing too. And the farmers were producing. And land began to see a plow that never should have seen a plow. We talk about a dust bowl today. One of the reasons is because of unwise Government policy that encouraged the farmers when we had no need for all of that food and fiber at the close of the war. They started producing. So what happened.

Well now folks, it's like the old three-legged stool that some of you used to sit on to milk the old family cow. The first leg is a high incentive. Guarantee the farmer a high given price for a certain commodity and that sounds interesting. That tickles his ear. And if he is not careful he will believe it. He'll believe that that is wonderful. Well, if he doesn't turn the record over and hear the other part of that siren song, he might be sold a bill of goods. But pretty soon he decides when you set him a high incentive level that there is a second leg that counts. Because when you set that incentive level up so high that he wants to produce that commodity, and so do a lot of other people want to produce that commodity, then what happens. Then the commodity starts building up in Government warehouses. Because you can't sell it on the market. After all you've put the price so high in some cases, you've priced it out of the market. And the only buyer—the major buyer, is the Government. And they have to take it. That's what we did with butter. We priced butter right off the market and into Government storage. And the American housewife decided that she didn't have to eat butter. She could eat something else.

The farmer finally realized that a Government warehouse was not a market. And gradually he lost his market. Folks, whenever you ask Government to do something for you, you best be careful lest Government do something to you. So what do we have? The first leg, incentive. The second leg, surpluses—without regard to what the market will take. When you get surpluses building up and building, then what have you got to institute—the third leg.

And what's that? That's Government controls. Then you tell the farmer he's got to cut back—he's got to cut back his production—pull it back—pull it back. And last year we cut back the Kansas wheat farmer 5 million acres.

Well, great scott, folks, if you guarantee a price on a given commodity and a farmer can only plant half of his land, pretty soon he's going to operate an uneconomic unit; isn't he? Because it's price times volume minus expenses that equals net farm income. And so we start cutting the farmer back and we cut him back and we cut him back. And who do we hurt? The suitcase farmer, the doctor, the lawyer, the merchant, the chief. Yes, but who do we hurt most of all—we hurt the guy who has been in the business

all his life. That's who. And so we cut him back and we cut him back and we cut him back. And we tried to control all this surplus that was building up by pulling him back and pulling back. Oh, the farmer wasn't so dumb. Sure it hurt him. But what did he do with the land that he was allowed to plant? He just put his rows closer together and poured on some more fertilizer. But what about the land that he couldn't plant in that surplus commodity? The land that he couldn't raise the surplus crops on, he put it into other crops. And pretty soon those other crops began to get in surplus. And after a while we started chasing acres around. Trying to pull him back, because whenever you start regulating 4 or 5 commodities, and show them preference, then you have to be careful.

And once a problem child begins to spread its disease to another, let me tell you what happened. We had a surplus of wheat. So we told them to cut back in wheat, and so what did he plant on his land? He planted feed grains. And so did a lot of other farmers. We didn't have a surplus of feed grains, particularly, but when they started using up their other land for feed grains, then we got a surplus of feed grains. The price for feed grains in the market place was very low, and the farmers, instead of selling their feed grains in the market place for the low price they could get with quite a surplus on hand, decided they could get more money if they put it into hogs. And so they took their surplus feed grains and put it into hogs, and pretty soon we have a surplus of hogs. And so what happens? You would hardly think it had any connection, yet it started around in a circle. And one disease spread its problem child to another.

Well, what happened? The surpluses began to build up. And, folks, it's hard to get rid of surpluses—it's just hard to get rid of surpluses. These surpluses build up and they are hanging over the market, and farm prices can't rise to where they ought to rise while all these surpluses are hanging over the market.

And so the President this January recommended a soil bank. A soil bank so when we asked the farmer to cut back his production he couldn't raise anything else on that land—nothing—and he could do one of two things with the land that he didn't plant anything on—so that he didn't create a surplus of any other commodity. He could do one of two things: He could take out of the surplus that the Government had on hand the commodity that he would have raised on that land, and that way we'd keep him from growing more commodities, and we'd also start pulling down the surplus; or, second, we'd give him a certificate which would be redeemable in cash, which certificate would make up part of the difference of the crop he would have accrued had he planted his land and marketed his crop.

Now, when we recommended the soil bank, both political parties said it was great. Both of them said it was wonderful. One of them accused us of not getting it into operation sooner. Well, maybe their accusation is just. They said they had been thinking about it for 20 years. We decided to do something about it. Nevertheless, both of them said it was wonderful. And I don't care who gets the credit for it; it was a good idea, and so we asked the Congress if they would pass it.

O. K., what happened? Folks, this is when politics reaches its low ebb. When both political parties said they wanted it, then one by hedge; wait, stymie, delay—the Congress waited for 6 weeks before they called upon my father to testify before the House Agriculture Committee. When every day was of the essence, and farmers can't wait until Congress passes a law, you know, before they lay out their operations, because when the seasons break they've got to plant their land. When the Congress hedged and stymied, the Democrats waited long enough until all over America farmers were beginning to lay out their operations.

What happened? Such tactics as this, when they were debating, talking about the soil-bank bill, one of the Democrat Senators stood up in the Senate and took up 3 days reading a 350-page manuscript, and by his tactics was able to delay the bill even longer, until what happened? All over America farmers began to plant without the benefit of the soil bank; without the idea they were to pull down the surpluses so their incomes could naturally rise in a free market. But not to appear as though they were the enemy of the American farmers, they gave the President a bill, and guess what the bill included.

They put in the soil bank—too late, of course, for the farmers to enjoy the full benefits—and guess what they tagged onto the coattails of the soil bank—90-percent rigid wartime price supports. Now look; they wanted to pay the farmers a million dollars or so to pull back their production, and they tagged 90-percent price supports onto the bill to encourage them to produce. The two of them canceled each other out. The farmer would hardly be any better off; the American taxpayer would be out several million dollars. It's so stupid, and they thought they had the President in a box.

"Mr. President, if you sign that bill, you are going to have to stomach a lot of uneconomic principles, which will be hard on you, or (2) if you don't sign the bill, we're going to make you out as though you are the enemy of the American farmer."

Now, that was their tactics. And the good President, bless his heart—in an election year, mind you; they didn't think he would do it—but in an election year he had the moral courage to veto a farm bill and to tell the people why. It isn't an ordinary thing for a President to veto a farm bill in an election year. But we don't have an ordinary President.

Well, he got another farm bill; it came closer to what we wanted. But they hedged and delayed long enough that the farmers are now only receiving one-fifth or one-sixth of the benefits they could have enjoyed had the Congress just passed it sooner, which they could have done.

And do you know why they waited and hedged and delayed? Because there were some politicians that were so scared that the farmer would enjoy some good sound economic benefits between now and fall that they couldn't make the political capital out of his plight they had planned to.

Well, where do we go from here? We'll do everything that is economically sound, right, and fair to all of our people but we are not going to be stampeded into programs that we will have to repent of later. My mother tells me the Devil's pill always kills, but some people like them because they are sugar coated.

Now, agriculture isn't going to pot—don't you believe it. Land values are rising—land values are at an alltime high. If agriculture is going to pot, why have farmers bid land values up to an alltime high? The mortgage ratio is at an alltime low. More farmers in proportion own their own farms than ever before. For the first time since the war, the prices are beginning to rise. Sure it's an adjustment from wartime to peacetime economy, but I'd rather make the adjustment than prolong the war.

Yes, I know the opposition has brought high prices to the farmers. Sure. But do you know when they brought them? During the First World War; during the Second World War; during the Korean war. Well, it's my belief that farmers can prosper in peacetime and I'd sure rather see my son prosper by riding on a tractor than driving a tank. Now we're moving in that direction.

We're moving out of this now. We're working in the right direction. We're not accepting programs just for the political applause meter. We're not going back to those bankrupt programs of the past. I'll tell you to go back to that rigid price-support program, which the opposition says is the answer to the farm problem, the very problem which those rigid price supports created, it's as stupid as eating sour apples to cure the stomachache that was caused by sour apples.

Now we're moving in the right direction, folks. We're working out of it and like old Billy Sunday used to say, "I'd rather be 1 foot out of Hell headed in the right direction, than 40 miles from Hell heading toward it."

Now we're working out—and we need your support—and we need your help. We've got a lot at stake in this thing. If you compare the two platforms you'll see simply this—the one advocates more control, more regimentation, more dictation, more telling the farmer what to do. I'll tell you folks—if you want to know what the real issues in this battle are—why so many State planners and leftwingers are so interested in this farm vote—I'll tell you because the issues are these. Is Government going to be the servant or the master of farmers? Is the farmer going to be able to make the decisions on his own farm, or is he going to have to wait for someone in Washington to tell him what to do? Is the farmer going to be a freeman, or the pawn of the State? That's the difference. One platform geared to more control—more regulation. The other would lead up the road to freedom, to encourage the farmer to help himself, to market his product, to get out and sell in a free market, to move in the direction of research and assistance—but not to dominate.

Now, it's just as clear as black and white. Well, I love the rural people of America—there's no better citizen. I'll tell you, once you regimentize the rural people of America, then you'd just better check off the very things this country believes in because they are the one segment of the economy that is the last to accept these crackpot theories and foreign ideologies. By and large they are sound citizens. I'll tell you there is no group of people who know better that "as you sow, so shall you reap."

Attention, Parents

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, our Nation each year observes S–D Day, a 24-hour period dedicated to safety on the road. The large number of people who drown each year suggests that a similar campaign for safe swimming ought to be instituted and that a Safe Swimming Day might be established to give the same nationwide prominence and emphasis to water safety.

With this thought in mind I include here 2 articles, 1 an editorial, from the Trentonian, of Trenton, N. J., which deal with this matter.

The articles follow:

[From the Trenton (N. J.) Trentonian of August 7, 1957]

ATTENTION, PARENTS

Several weeks ago we sat at a local pool and watched a very small child toeing her way around the edge of the water, beckoning to a rubber tube that floated out of reach.

At times, she leaned precariously forward. Beneath her, the water plunged to more than 5 deep, breathless feet. At the side of the pool sat the child's mother, sunning herself, deeply absorbed in a women's magazine—a potential murderer.

For it is such circumstances as these that result in the most inexcusable and expensive of deaths—the drowning of our children. Summer spawns a unique state of affairs. The guardian becomes the killer of the ward. The crime: Murder by negligence.

The sponsors of the Safe Swimming Day campaign are determined to meet this deadly disinterest with a relentless drive for awareness about every phase of knowledge about the water. Backed by the local branch of the American Red Cross, radio station WTTM and the Trentonian, 11 pools at all points of the city are now engaged in a 9-day program which will culminate in Safe Swimming Day, an intensive all-day water safety demonstration, on August 14. The emphasis will be on the preservation of life through the prevention of mishaps, a program of expert vigilance and heightened knowledge of the techniques for safety.

It is not enough that we know ourselves. We must know, and, as Richard Alexander, champion swimmer and originator of S–S Day, pointed out, we must respect the water. Too often we have designed our tragedies with the weave of disrespect, and given our children death to wear.

We cannot afford to ignore S–S Day or to assign it our complacency. We cannot afford not to know how to apply artificial respiration or to rescue ourselves from a sinking boat or to tow a drowning swimmer to shore. Finally, we cannot afford to forget that water and fun is not the only combination in summer swimming. Another is water and death.

It is the absolute duty of every parent to take the initiative and bring his children to one of the participating pools on S–S Day, and to take active part in insuring the year-round success of the campaign. We owe it to our children to prepare them for the serious business of swimming and boating. Either this, or we had better heed the saying, "Don't go near the water."

The problem of the high number of drownings in this area is one worthy of our time, our attention, and our deepest efforts. For when shall we devote ourselves to a greater cause than the saving of one very small child?

[From the Trenton (N. J.) Trentonian of July 12, 1957]

URGES S–S (SAFE SWIMMING) DAY BE SET UP

(By Dick Alexander)

Our Nation each year observes S–D Day, a 24-hour period dedicated to safety on the road, but the tragic drownings of the last few days have convinced me that an S–S Day—Safe Swimming Day—ought to be instituted immediately and given the same nationwide prominence and emphasis as our driving campaigns.

Every year thousands of people are drowned—needlessly, sad to say—because they don't observe the most elementary rules of water safety.

Jay and I have been lifeguards for many years and during that time we've managed to save scores of lives. This may sound like we think we're Jack Armstrong, the all-American boy, but I don't mean to brag. The point I want to make is that over 90 percent of those folks we had to pull out never would have needed assistance if they had used a little commonsense.

It's an awful thing to see the bodies of the drowned after they've been pulled from the water by rescue squads. My brother and I know. One summer after we were finished with our lifeguard duties and were on the way home, we saw cars clustered around a lake and throngs of people milling about. We learned that two young brothers had perished in the water. I wish all the people I know could have seen those boys when they brought them out.

From my experiences at the shore I've found out that most people who require help are those who've been caught in a strong tide and are yanked out to sea.

A tide thats' strong enough can take anyone out—and that goes for a lifeguard, too, so you just have to be careful when you swim at the shore. The first thing to do if you get swept up in a tide is to relax. If you're calm enough to think out your situation you may not need aid. Then slowly get to the top of the water to avoid the undercurrent, which is what does the pulling.

Then, instead of trying to swim directly back to shore, proceed diagonally, using the breast stroke, which is the best to use in this case because it'll keep you higher in the water and it's less tiresome than any other.

Cramps cause many drownings, too, and they usually could have been avoided had the persons involved followed a few simple rules. You shouldn't go swimming right after you eat. If you eat something very light—ice cream, pop, or a hot dog—wait at least a half-hour. If you've packed away a full dinner better wait for 2 or 3 hours and give your system a chance to digest the repast.

Secondly, wet your body before you enter the water. This way you'll accustom yourself to the water and the chilliness won't bother you. A full stomach and a sudden change of temperature form an invitation to cramps.

Here's something I can't stress too strongly. Don't show off in the water; it's there for your enjoyment and not your danger. When you show off, you're asking for trouble; by swimming hard and fast you'll merely tire yourself out and you won't have the strength to meet an emergency.

And remember this: Don't swim where there's no one around to lend you assistance. I consider myself a good swimmer and yet I won't go swimming where there's no lifeguard.

I'd also like to impress this upon you: A lifeguard is trained in the ways of water safety. He must pass periodic tests to show he's an able lifesaver so if someone needs assistance and there's a lifeguard around, let that lifeguard do his job unhindered. More than one well-meaning person had drowned trying to save another.

I'd like to see every day in the water be known as Safe Swimming Day. You've got to learn to respect the water or your summer fun could well end in catastrophe.

The Chairman's Report on Activities of the Select Committee on Small Business of the House of Representatives

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. PATMAN. Mr. Speaker, I am presenting at this time the chairman's report covering the activities of the Select Committee on Small Business of the House of Representatives. This committee was created in the 85th Congress by House Resolution 56 agreed to on January 31, 1957.

Pursuant to the provision of that resolution the following Members were appointed to serve thereon: Representative WRIGHT PATMAN, Democrat, of Texas, chairman; Representative JOE L. EVINS, Democrat, of Tennessee; Representative ABRAHAM J. MULTER, Democrat of New York; Representative SIDNEY R. YATES, Democrat of Illinois; Representative TOM STEED, Democrat, of Oklahoma; Representative JAMES ROOSEVELT, Democrat, of California; Representative CHARLES H. BROWN, Democrat, of Missouri; Representative WILLIAM S. HILL, Republican, of Colorado; Representative R. WALTER RIEHLMAN, Republican, of New York; Representative HORACE SEELY-BROWN, JR., Republican, of Connecticut; Representative WILLIAM M. MCCULLOCH, Republican, of Ohio; Representative TIMOTHY P. SHEEHAN, Republican, of Illinois; and Representative CRAIG HOSMER, Republican, of California.

INTRODUCTION

This is intended to constitute not only a report accounting for the work of your Small Business Committee during the 1st session of the 85th Congress but also a brief summary concerning economic conditions and various activities affecting the small-business community directly and the Nation's economy indirectly.

ECONOMIC HEALTH OF SMALL BUSINESS

The problem of maintaining an economic climate in which small business can survive is ever present. Downward trends in the general health of small business which have been in evidence for the past several years continue, and are disturbing.

In the first 8 months of this year, there were 9,520 business failures—according to Dun & Bradstreet reports—an increase of 8 percent over the same months of last year. Yet business failures last year had set a previous postwar high. If business failures continue throughout the year at the rate established in the first 8 months, this will mean a failure rate of 53.7 failures per each 10,000 firms in operation. This will be the highest failure rate since 1941—when numerous small firms became "war casualties"—and it will be twice the average annual rate—26.9 percent—of the previous 15 years.

The mounting toll of small business failures becomes a warning signal for most serious concern when considered against the backdrop of general business conditions. These conditions are generally regarded as representing a high rate of business growth and a state a general prosperity. In reality, increases in the Nation's output of actual goods and services, during the past few years, have not kept pace with the annual productivity increases of the postwar years. For example, from 1948 through 1952 the gross national product, measured in constant prices, increased at an average rate of 5 percent per year whereas the annual rate of growth from 1952 through 1956 has been at the rate of only 3 percent per year. Nevertheless the national output has continued to increase, with the actual physical volume of goods and services produced in 1956 representing a 12 percent increase over the physical output in 1952. And, in fact

same period, the population of the country has grown by 16 percent.

The most striking feature of business activity over the past few years, moreover, has been the increasingly large investment in new business capacity. Expenditures for new plants and business equipment of all kinds have risen to unprecedented highs, reflecting an expectation of increasing production in future years—at least on the part of those firms that are able to make the expansions. If the estimate of approximately $37.5 billion to be spent for new capital goods in 1957 proves correct, this will be 5 percent more than was spent last year, and 42 percent more than was spent in 1952.

Furthermore, corporate profits—taking businesses of all sizes together—continue to mount to new highs. In the first quarter of this year corporate profits exceeded the previous all-time high reached last year, and this was true both on before-taxes and after-taxes basis.

MORE ON PROFIT RATES

How then has this general growth of busines affected small business? Has there been a corresponding growth in opportunity for small business to accommodate the Nation's increased population?

Between the end of 1952 and the end of 1956 the total number of business firms in operation increased from 4.2 million to 4.3 million—a rise of only 2 percent to accommodate a population increase of 16 percent, and a physical increase in goods and services of 12 percent. The stunted growth of small business during this period involved a cost of 1,313,500 discontinued businesses and 1,330,220 transeferred businesses, including both mergers and businesses sold to new owners.

What also, it might be asked does the present boom in capital expansion portend for small business in the future? Since present productive capacity, with a few exceptions, is already substantially in excess of the immediate foreseeable consumer demand, there is a grave question whether the tremendous new investment in productive facilities being made by the giant corporations foreshadows a corresponding outpouring of consumer goods and services, or whether the new capacity being acquired by the larger corporations is not destined—in large part—to replace capacity now in the hands of smaller firms.

MAJOR CAUSES OF SMALL-BUSINESS DECLINE

Undoubtedly there are many factors working toward the diminution of small business in our economic system. Your Small Business Committee has tried, and will continue to try, to discover what the important factors are and point out those which can and should be corrected.

There are several factors, however, which bear with such overwhelming weight on small business that they warrant extraordinary attention.

First, the Federal antitrust and trade regulation laws contain serious weaknesses, permitting trade practices which create artificial advantages to bigness and destroy smaller competitors without respect to technical efficiency or other merits. Foremost among these is the practice of discriminatory pricing which has reemerged since the Supreme Court reinterpreted the Clayton Antitrust Act, as amended, in the Standard Oil—Indiana—case. Your Small Business Committee investigated this matter thoroughly during the 84th Congress and made a full report to the House. In addition, during the present Congress, the House's attention has been called to the need for legislation to plug this loophole in the antitrust laws.

Second, the present Federal tax structure alone could be expected to contribute importantly to the possible elimination of small firms from the business system within not a great many years. Differences between the impact of the individual income tax and the impact of the corporate tax allow the large corporations to retain earnings and accumulate growth capital—with relative ease, whereas there is no commensurate opportunity for proprietorship and partnership firms to retain profits on which to expand. Furthermore, the corporate income tax places a vastly heavier burden on the smaller corporations than it does on the bigger corporations. The tax cuts heavily into the retained earnings of the smaller corporations, since, as a general rule, the forces of competition are present to limit the prices and profits which smaller corporations may take, but little affects the capital accumulation of the bigger corporations which are much more able to shift the tax onto other taxpayers.

These considerations were set out in the committee's final report in the last Congress and, at other times, the attention of the House has been called to the need for tax adjustments which will bring about a more equitable distribution of the tax burden among business firms.

Third, as has long been recognized, there is a problem of small firms gaining adequate access to the sources of capital. On top of this chronic problem, it now appears that to the extent that business firms are being squeezed by the tight money and high-interest policies, small firms are bearing the brunt of these policies. While your Small Business Committee has made no recent recommendations concerning the small-business financing problems, it does have an investigation underway by which it is hoped that at least the sources of this continuing problem will be better identified and understood, with the result that constructive recommendations will be forthcoming.

WORK OF THE COMMITTEE

The interest of your Small Business Committee has pointed primarily at those matters having a direct bearing upon the establishment, growth, and survival of small-business concerns. These matters include problems arising from the financing and the taxing of small-business enterprises as well as studies of business practices and activities of Government in the enforcement of laws relating to business practices, financing, procurement and numerous other matters affecting small business.

CASE WORK OF THE COMMITTEE

In addition to the program of the committee and its subcommittees regarding the studies, investigations, hearings, and reports covering the matters referred to above, the staff of the committee, under the direction of the chairman, from day to day throughout the 1st session of the 85th Congress carried a heavy work load of case work. The term "case work" is used to identify those problems pertaining to small business which were referred to your Small Business Committee principally by Members of the House. In the handling of each of these day-to-day problems, the committee and its staff operated as a service agency for the Members. In doing so it served as a special link between the Members and parties from whom information was needed. Frequently the needed factual information was secured from agencies of the executive branch of the Government. In other instances it was obtained from offices of large corporations. In each instance your Small Business Committee located the proper source, secured the pertinent data, arranged for appropriate consideration of the small-business concern's problem, and thereafter reported to the interested Member. These matters, as indicated, were quite numerous and some of them involved such knotty problems as to require the members of the staff to devote a substantial part of their time in handling them to completion.

FINANCING PROBLEMS OF SMALL BUSINESS

It goes without question that with each increase in price on the items needed for the operation of small-business concerns the latter are faced with an increasing need of more financial resources in order to carry inventories and to satisfy other needs for working capital, growth, and survival.

When any business concern is faced with a condition of depleted financial resources and his suppliers and the local banks tighten up and refuse to extend him lines of credit, he is indeed in a precarious situation. Small business faced with such difficulties is quite limited in its opportunities to secure financial assistance. Therefore, it is natural for small business concerns to look to and expect from the Federal Government not only sympathy but assistance in such situation. Indeed, to meet that problem Congress enacted Public Law 168 of the 83d Congress in 1953 to establish a Small Business Administration to provide among other things financial assistance to small business. Thereafter, the Small Business Administration was renewed and strengthened by Public Law 268 of the 84th Congress in 1955. In the closing days of the 1st session of the 85th Congress, S. 2504 was passed and approved extending the life of SBA to July 31, 1958. In the meantime, Congress will be considering additional legislation regarding the Small Business Administration and for providing needed financial assistance to small business.

By comparison with its present rate of activity, SBA did much less to provide financial assistance to small business during the period of 1953 and 1954 than

it has done in 1956 and 1957. According to a press release from the SBA dated August 28, 1957, it increased its approval for financial assistance during July 1957 to an amount more than double what it had approved for small business during July 1956. The rate of SBA's activity in that respect had more than doubled in 1956 over what it had been during 1954 and 1955. Prior to 1955 a larger proportion of small business concerns applying to the SBA for financial assistance was denied assistance than is the case today. Also the growing need for financial assistance is reflected in the additional activity of the SBA.

The increasing need of financial assistance for small business has been of deep concern to your committee. Consequently, the House Small Business Committee decided to make an investigation into the financing problems of small business. That investigation has been started.

An effort has been made to determine how well private financial institutions are serving small business. We are attempting to get a clear picture on how well the present policies of the Federal Government have served the needs of small business in its efforts to secure financial assistance and whether other policies of the Federal Government have worked against small business satisfying those needs. In that connection, the committee has undertaken factual surveys with the cooperation of life-insurance companies and other segments of the financial community. Efforts are now underway to secure the cooperation of commercial banks in securing data concerning this matter. Also, your committee is watching with interest and giving study to proposals that the Board of Governors of the Federal Reserve System make a study in the field of small-business financing.

In addition to the staff work which has been undertaken under the direction of the Chairman concerning the financing problems of small business, the committee has decided to hold hearings on that subject in Washington, D. C., and these hearings will commence before the end of the year. They will be resumed early in the 2d session of the 85th Congress in January 1958.

It is planned that at the hearings testimony and other evidence will be introduced which will show how well private financial institutions and Government policies are serving small business in its effort to secure needed capital. In addition, the inquiry will cover the extent to which the boards of directors and advisers of the big financial institutions and the big industrial and commercial corporations are interlocked and how these interlocking boards and advisers affect the ability of smaller industrial and commercial companies to obtain financing. Of course, within the purview of that inquiry will be a probing of the policies and practices of such groups in their relation to the flow of capital into and through free and competitive financial markets for the financing of business enterprises.

IRON AND STEEL SCRAP PROBLEMS

Proposals for Government intervention to restrict exports of scrap iron and steel have been the subject of a periodic controversy for several years. Manifestly, such limitations, or the failure to impose such limitations, affect numerous small-business firms, both in the scrap trade and in the metal-using industries, such as the iron and steel foundries and the semi-integrated steel companies.

In addition, the committee has received numerous complaints from members of the scrap trade concerning conditions and practices alleged to be growing up within the industry. These have included complaints of exclusive dealing, or near-exclusive dealing, on the part of foreign scrap-buying cartels with certain favored members of the United States industry; they have included complaints that similar exclusive dealing or near-exclusive dealing has become a common practice of United States steel mills in their purchases of scrap; and they have included a variety of other alleged private trade restrictions which are said to threaten the continued welfare of small firms in the scrap industry.

As a consequence, at the beginning of this session of Congress, the committee undertook the task of making a more thorough investigation and study than had previously been made of this industry for the purpose of trying to reach a resolution of some of the chronic issues and conflicts.

Shortly after the study was begun, the committee's attention was abruptly focused on new problems in the export phase of the industry. On May 6 the Department of Commerce suddenly announced that it was invoking its authority to embargo further exports of heavy melting scrap to three geographic regions of the world which constitute the principal foreign markets for these materials.

The committee held open hearings during the week of May 19, and hearings in executive session during the week of June 16.

Testimony was directed primarily to export problems and to conditions in the export markets about which exporters and dealers were disturbed, although considerable testimony was also heard about problems in the domestic markets.

While the committee has not yet made its findings, certain uncontroverted highlights can be pointed out.

Scrap dealers were disturbed at what seemed a new policy of restricting exports of scrap steel—and were protesting the adoption of such a policy on the grounds (a) that there was insufficient reason for it and (b) that such a policy would be inequitable in view of the fact that there was no proposal to limit exports of either new steel, iron ore, or pig iron. Testimony of officials of the Department of Commerce point out, however, that the United States Government had in fact adopted the policy in question early in the previous year and that restraints on exports of steel scrap in the calendar year 1956 had been effectuated by working out voluntary quotas with the governments, or their buying agencies, representing the three foreign markets in question. The three principal foreign markets are: (a) the United Kingdom, (b) Japan, and (c) the European Coal and Steel Community, which is comprised of the steel industries of France, Western Germany, Italy, Belgium, Luxembourg, and the Netherlands. In each case, purchase of United States scrap for importation to these areas is made through a central buying agency.

An export license from the Department of Commerce is required to ship scrap to most of the other countries of the world, but there has been no quota limitation as to the tonnages which these countries may purchase.

During the calendar year 1956, the Japanese purchasing cartel had made purchases substantially in excess of its voluntary quota for that year. The voluntary quotas for the calendar year 1957 were in controversy on May 6 of this year, although at least one of the foreign purchasers with whom quotas were then being negotiated had already placed orders aggregating the total quantities of scrap which it had received from the United States in the previous year. It was for these reasons—according to Department of Commerce officials—that the Department had reached the decision to limit exports to the tonnages of the previous year—pending an understanding on the 1957 quotas. An additional reason given for this decision and for the Department's intention of working out "voluntary quotas" again for the year 1957 was the fact that the Department was then newly in receipt of a report prepared by the Battelle Memorial Institute at the Department's instigation. The Battelle report appraised the supply-demand outlook for scrap and concluded that there is a "potential shortage" of the heavy melting grades of steel scrap in the United States in the years ahead.

Following the committee's first week of hearings, the Department of Commerce announced that an understanding had been reached with the foreign purchasers as to "voluntary quotas" for the year 1957. These quantities, in general, allow each of the 3 principal foreign purchasers tonnages amounting to approximately 13 percent more than the tonnages which these purchasers actually imported from the United States in the year 1956. These quotas, it might be added, apply only to the heavy melting grades of scrap, as the lighter grades are considered to be in plentiful supply and may be freely exported.

On this point, witnesses representing the foundry industries and the semi-integrated steel companies said that in their operations heavy melting scrap is an essential raw material for which neither iron ore nor pig iron is a substitute, and in many cases new steel is also not a practical substitute. One foundry man testified that he had been forced to raise the price of his products because of a long period of rising prices for scrap.

Scrap exporter witnesses testified that, since lifting of United States export controls at the end of 1953, it had been the practice of the central purchasing agency for the European Coal and Steel Community to purchase all or substantially all of its scrap requirements from the United States on contract with a syndi-

cate of a small group of United States exporters, the group including the dominant factor in the United States market. Some of the most vigorous complaints heard from both exporters and dealers went into this situation.

The attention of the Department of State was called to the transcript of the committee's hearings, and the State Department in turn called attention to the transcript to the High Authority, which is the governing body of the European Coal and Steel Community. Subsequently, the High Authority advised the State Department that it was instructing the OCCF, its purchasing agency, to promulgate "standards and criteria" for a new method of purchasing scrap from the United States, whereby normal "commercial considerations" would determine which and how many United States suppliers might have access to that market.

Finally, on July 11, the High Authority sent a communique to the State Department setting out the standards for a new purchasing procedure. These state that "all scrap dealers of the United States shall be entitled to make offers under the same conditions," and "that when examining the offers the OCCF will take into account (a) prices and other conditions relating to prices, (b) compatability and regularity of quality, (c) date of delivery, and (d) dependability and regularity of shipment." It thus appears the restrictive features which have heretofore obtained in the European market will be removed and that all United States suppliers of "good reputation" will have equal opportunity to compete in the OCCF market.

Several exporter-witnesses made complaints about the purchasing practices of the Japanese cartel, similar to those which have been made about the OCCF. Testimony is to the effect that immediately following removal of the export embargo in 1953, the Japanese cartel first entered into an exclusive supply contract with one United States firm, an arrangement which continued, however, for only approximately 6 months. Since that time the Japanese cartel has widened its "cartel list" of acceptable suppliers to the extent that six United States exporters have contracts or orders from the Japanese. There was testimony, however, to the effect that the practice of limiting orders to six exporters is highly arbitrary, and that other aspects of the cartel's purchasing practices appear to be motivated by other than normal commercial considerations.

Statements from officials of the State Department indicate also that that Department considers that the Japanese cartel's present method of doing business with United States firms falls short of the objectives of United States policy to encourage competitive conditions and practices in foreign markets as this policy has been enunciated in the Mutual Security Act.

In its invesigation of the iron and steel scrap industry the committee must necessarily open up for inspection points around which sharp conflicts of commercial advantage or disadvantage revolve. Under these circumstances it is regretable, but perhaps inevitable, that all parties would not be pleased or give enthusiastic welcome to the committee's investigation. Thus, for example, shortly before the committee's hearings opened, the executive vice president of the Institute of Scrap Iron and Steel—which is the largest trade association of yard dealers and scrap brokers—made a speech which was then published in one of the trade journals in which he described the committee's investigation as an "attack on business" by Members of Congress who have been associated with the New Deal movement.

On the other hand, following the first week of the committee's hearings, the board of directors of the National Federation of Independent Scrap Yard Dealers, Inc., adopted a resolution commending and thanking the committee for its investigation.

In addition, the committee has received, and continues to receive, large numbers of letters from members of the trade commending or approving the committee's investigation.

This resolution and excerpts from many of these letters appear below:

NATIONAL FEDERATION OF INDEPENDENT SCRAP YARD DEALERS, INC.,
New York, N. Y., June 7, 1957.

Hon. WRIGHT PATMAN,
Select Committee on Small Business, House Office Building, Washington, D. C.

DEAR CONGRESSMAN PATTON: I take pleasure in enclosing herewith text of a resolution adopted by the board of directors of the National Federation of Independent Scrap Yard Dealers, Inc., at its meeting in New York City on Monday, June 3, 1957.

It not only expresses the views of the board but, I feel, fairly reflects the attitude of the approximately 4,000 independent scrap yard dealers in the United States.

We have had several meetings with members of your staff. I take this opportunity to state to you the great regard which I have for their work and to note the high level of efficiency and courtesy on which the current study is being conducted, judging from my personal experience.

Very truly yours,

STANLEY ASRAEL,
President.

Resolved, That the board of directors of the National Federation of Independent Scrap Yard Dealers, Inc., at a meeting assembled, extends its thanks to Hon. WRIGHT PATMAN, chairman of the House Small Business Committee, for the splendid work being conducted by the committee and its staff in its trailblazing study of the vital scrap industry, composed for the greatest part, numerically, of small-business men; and be it further

Resolved, That it is the sense of the board of director of the National Federation of Independent Scrap Yard Dealers, Inc., that the current study fills a sorely needed review of this industry which has too long been regarded as being merely on a standby basis and has been denied proper recognition for the indispensable role which it plays in our national economy as one of the few remaining major noncaptive components of the steel industry.

JUNE 7, 1957.

We note with great pleasure the recent announcement made by the State Department to the effect that the European coal and steel community is planning to take steps to eliminate the monopoly purchasing practices by the Luria Bros. & Co., Inc. We feel that this was a very necessary step, as it will enable the independent scrap dealers in this country to participate in a larger way in the export program to the OCCF countries, as we will now have a free and competitive situation in the export scrap industry, which will be helpful to the United States of America as well as to the OCCF countries.

Once again we want to congratulate you on the wonderful stand you have taken.

* * * * *

I wish to congratulate you and the committee on the very fine and conscientious study which you and your staff has made of the scrap industry.

As a small-business man we are conscious of the fine results. * * * It is very gratifying and we wish to express our appreciation for a job well done.

* * * * *

It is heartening to see the wonderful results you and your committee have attained. * * * We are a relatively small scrap organization, and at times it is very difficult for us to maintain our independence and not become a pawn of others. We have been discriminated against and have found certain markets closed to us, but we will still maintain independence. Again, thank you for your sincere efforts on our behalf.

* * * * *

Congratulations on a job well done. To your, your committee and the staff of your committee, our hats are off and for a very thorough study of the scrap industry. * * *

We as an industry are very grateful to you for accomplishing this worthwhile program.

* * * * *

Our small company has watched with interest the work of yourself and your committee in its study of the scrap industry. A very fine job has been done which is a credit to you and the committee.

The industry is extremely grateful for what you have done for it. We trust that this small measure of appreciation will show you that your efforts have not been wasted.

* * * * *

The recent announcement to the effect that the European Coal and Steel Community is planning to take steps to eliminate restrictive purchase practices of the OCCF was indeed good news to me, as well as to all my colleagues in the scrap export field. I wish to thank you and all the members of your staff for the stand you have taken in this matter.

This growing monopoly situation was bound to have widespread effects upon independent scrap dealers in the United States who, because of location and other economic circumstances, depend upon the export market for a large volume of their business. We believe that the best interests of the Community and the United States are served by a truly free and competitive situation in the scrap-export industry.

We hope that the Select Committee on Small Business will continue the vigilance which it has exhibited in the past to prevent a recurrence of the monopoly situation that has existed.

* * * * *

May we extend to you, and your committee, our congratulations on the study you have made of the scrap industry and the fine results forthcoming therefrom.

Speaking for ourselves, and our friends, in the industry, we express to you and your staff our gratitude.

* * * * *

As one engaged in the humble industry of buying and selling scrap—I want to thank you and your committee for the valuable services rendered the scrap dealers through your untiring efforts in the study of the situation in the scrap industry.

* * * * *

We conduct a small scrap yard operation here in Rochester, N. Y., and are members of the scrap industry.

At this time we would like to pass along to you and your committee congratulations for the wonderful job done on your study of the scrap industry.

• • • • •

It is my pleasure to take this opportunity to congratulate you, your committee and staff on the excellent and revealing study the committee has made of the scrap industry.

• • • • •

Please accept our humble thanks, for the worthwhile program, set up by both you and your committee.

As a small-business man, also a member of the scrap industry, excellent results seem to have been obtained, and we are very grateful.

• • • • •

We wish to congratulate you, your committee, and the staff of your committee on the time, effort, and consideration which you have given to the study of the scrap industry.

Bringing into the open various phases of operation will help to preserve the independence and advancement of the small dealer, collector, and broker in a free and competitive atmosphere.

As a whole the industry is thankful to have a champion such as you have demonstrated and appreciate the accomplishments of your program.

• • • • •

Several days ago I received a press release of the Department of State, which contained information pertinent to the hearings before your committee. • • •

Certainly the information contained in this press release indicates that your committee has accomplished at least part of what it set out to do, and this is, of course, gratifying to us as it must also be to you and the members of your committee.

I would like to take this opportunity to thank you and all of your staff for your firm stand in this matter, and to assure you of my cooperation and that of other members of our industry should the necessity arise in the future.

I sincerely hope that most of the members of your committee are convinced that a real monopoly situation exists in connection with the activities of Luria Bros. Co., Ltd., and that this is not just a case of certain members of an industry requesting governmental aid in a normal competitive situation.

Again please accept my sincere appreciation for your efforts on behalf of our industry.

• • • • •

From our trade papers, we note that the European Coal and Steel Community is planning to take steps which will eliminate the monopoly purchasing practices of a certain group of large brokers in this country. This is certainly a step in the right direction and we know that this was brought about to a large extent by the actions of the United States Department of State and your committee. You realize that we as small independent dealers look at this action selfishly from our point of view. However, the writer feels certain that the well-being of the entire industry, of this country, and that of the OCCF countries will be in much better shape since the independent scrap dealers are enabled to participate in the export program to these countries.

Going still further, and along the same line, we also feel certain than an examination into the competitive situation and to a certain degree restrictive buying practices of several domestic steel mills could be corrected to the betterment of all concerned. I mean to the benefit of the scrap dealer, the scrap broker, the steel mill, and the economy of the country.

May I take this opportunity to thank you for the work which your committee has done in our behalf.

• • • • •

We wish to congratulate and thank you for the recent announcement that the European Coal and Steel Community is planning to take steps to eliminate the monopoly purchasing practices by the Luria group. We feel that this will save the day for the independent scrap dealers in our country.

A free and independent scrap business enabling competing participations in foreign markets will prove helpful to the United States of America as well as to the OCCF countries.

• • • • •

We understand that you, your committee, and the staff which worked with you has made a very thorough study of the scrap industry, which should go far toward promoting an understanding of our complex business.

• • • • •

This is to express my appreciation to you for inviting me to present testimony to your committee last Thursday, June 30, 1957, in connection with its hearings on ferrous scrap.

I am grateful, too, for the courtesy which you and your colleagues extended to me while I was before your committee.

• • • • •

I should like to take this opportunity of congratulating you as chairman of the House Select Committee on Small Business for the accomplishments of that committee with regard to the recent developments in the alleviation of restrictive purchase practices of the OCCF. The feeling of many dealers like myself is that it is a direct result of the efforts of this hard working and fair minded committee and you are to be commended. We can only hope that the hearings will have the same effect on the domestic scene.

As the daughter of a man who immigrated to this country at the age of 10, I have since childhood been taught that this is truly a democratic country where a person can rise as high as his own capabilities will permit and anyone can be heard by its government. My father is living proof that there are opportunities in this country but I must confess that until last week, I was cynical about having anyone listen to the voice of "the little man."

My appearance before the committee changed my cynicism to admiration and respect. I sincerely appreciate the courtesy of the committee when I gave my statement and feel that the questioning by its members showed interest in and a good knowledge of the scrap industry. Now I not only say, "Thank God for America," but also, "Thank God for those dedicated representatives who give so much of themselves to make sure that it remains a Government of, by, and especially for the people."

I wish you continued success in all your endeavors and want to assure you of my wholehearted cooperation at any time.

• • • • •

We wish to thank you for your efforts which resulted in the recent announcement to the effect that the European Coal and Steel Community is planning to take steps to eliminate the monopoly purchasing practices by certain groups.

We feel that this will be very beneficial to the independent scrap dealers of this country.

• • • • •

As a member of the Institute of Scrap Iron & Steel, Inc., and the National Federation of Independent Scrap Yard Dealers, Inc., permit me to take this opportunity to extend congratulations to you.

Speaking as an individual member, we are very grateful to you and your staff.

• • • • •

I noted with great interest the recent State Department announcement that the European Coal and Steel Community is planning steps to eliminate certain practices of the OCCF which have resulted in restraint of normal trade in iron and steel scrap in this country.

The monopolistic situation developed by the OCCF practices resulted in harmful effects on many individual scrap operators in the United States who depend upon the export market for the movement of a large percentage of their materials. I know that you will agree that the best interests of small business firms in this country are served by a free competitive situation, not only in the export trade but also in normal domestic activities. The logical extension of restraining practices would have soon forced the breakup and dissolution of many small firms who have actively served American industry in stress periods of iron and steel scrap requirements.

Our Nation should certainly support the operations of such small-business men and maintain their strength for service during periods of heavy domestic and military need for raw materials.

We trust that the Select Committee on Small Business will continue its unceasing efforts toward furthering a normal flow of iron and steel scrap, and thus prevent a recurrence of any monopolistic practices in the handling of this vital raw material.

• • • • •

I want to take a moment to thank and congratulate you, your committee and its staff. • • •

I am a small-business man and a member of the scrap business for many years.

• • • • •

I am pleased to submit my congratulations to you, your staff, and your committee for the very extensive and productive study of the scrap-metal industry just completed by your committee. As an owner of a scrap metal firm, a small-business man and a member of the National Federation of Independent Scrap Yard Dealers, I am gratified at the results that you have achieved, and I am certain that my fellow members of the scrap industry will aptly demonstrate their mutual appreciation of the fine work performed by you and your committee.

• • • • •

ACTIVITIES OF SUBCOMMITTEES

In order to carry out the detailed work connected with a variety of specific investigations agreed upon by the full committee, 6 subcommittees were established and designated as subcommittees, numbered 1 to 6, inclusive.

SUBCOMMITTEE NO. 1

This subcommittee is composed of Hon. JOE L. EVINS, of Tennessee, as chairman; Hon. SIDNEY R. YATES, of Illinois; Hon. CHARLES H. BROWN, of Missouri; Hon. WILLIAM M. MCCULLOCH, of Ohio; and Hon. CRAIG HOSMER, of California.

The matters referred to this subcommittee for study, investigation, and report related to law enforcement and subsidies affecting small business.

This subcommittee has initiated an investigation covering the policies and practices pertaining to Federal research and development contracts, as well as other Federal subsidies and incentives to business, with particular attention to the effect of these Federal activities as they relate to national antitrust policies. The study involves a review of the small

business interests in Federal policies pertaining to the acquisition and control of patents on federally financed inventions.

On November 19, 1956, the Attorney General of the United States, in reporting to Congress, made the following pertinent observations regarding this problem. He stated in part:

The impressive factual indications * * * may point a warning that the total effect of the research and development effort may well tend to increase concentration of economic power. Moreover, that evidence indicates that this tendency toward concentration may be accentuated and not retarded by the administration of Government financing of research and development.

As noted * * * the agencies administering the program have made no adequate compilation of statistical materials in this important area. The few analyses made have not adequately considered the problem of economic concentration.

The vital importance of preserving our economic system makes obvious the need for greater effort in this regard by the administrative agencies concerned. * * * A comprehensive delineation of the exact problem is a necessary first step to its solution. That delineation should include in detail the distribution of federally financed research and development projects among the various size classifications of industry, as well as the exact scope and distribution of other tangible benefits, such as patents and subsequent procurement, which result from participation in these projects.

The study undertaken by the subcommittee has, therefore, seriously considered the concentration of economic power flowing from these policies of the Government and the manner in which they have affected small business.

It is apparent that what happens in research and development might well spell out what will happen to small business in the future.

One of the major purposes of this project is to ascertain why officials and agencies of the Federal Government have adopted policies and procedures in connection with grants and subsidies for research and development programs which provide attractive opportunities for big business but seem to foreclose more and more the opportunities of small business to receive such favors.

In connection with this study, a letter of inquiry was forwarded to 100 representative large and small companies who were recipients of research and development grants from the Federal Government. The companies were requested to submit to the committee a list of all patents secured on inventions derived through research and development grants, awards, or contracts obtained from any agency of the Federal Government. The companies were also requested to submit copies of license agreements executed under each of these patents. Virtually all of the companies have responded thereto, and the staff of the committee is presently evaluating and studying these replies.

The problem is serious in view of the most recent available Department of Defense statistics revealing that small business is receiving less than 5 percent of these grants. It would seem, therefore, that small business is not receiving its fair share and that the Department of Defense apparently has failed to follow congressional intent. An outline of proposed hearings covering this problem of small business is being prepared.

In addition to the foregoing, the subcommittee has been studying problems affecting small business, which involve agencies of the Federal Government and their enforcement of laws designed to protect small business from unfair, predatory, and restrictive trade practices. This study has been prompted by the fact that small-business concerns which have requested Federal agencies to enforce laws prohibiting destructive trade practices have now complained that the Federal agencies in question had failed to act or if they had acted the action had not been taken timely. In addition, it appears that small-business men have complained to the Federal agencies about certain practices which, although made the subject of formal proceedings, those proceedings were concluded without provision for stopping the alleged unlawful practices. Therefore, before this subcommittee completes its study it will review not only the practices covered by the formal complaints issued by the agencies but also those covered by orders and decrees which made disposition of the formal complaints relating to the practices affecting small business. Likewise, the subcommittee is studying the effectiveness of the action taken by the agencies to enforce their orders and decrees for the purpose of determining whether small and independent business is being adequately protected in this regard.

SUBCOMMITTEE NO. 2

This subcommittee is composed of Hon. ABRAHAM J. MULTER, of New York, as chairman; Hon. SIDNEY R. YATES, of Illinois; Hon. TOM STEED, of Oklahoma; Hon. R. WALTER RIEHLMAN, of New York; and Hon. HORACE SEELY-BROWN, JR., of Connecticut.

The matters referred to this subcommittee for study, investigation, and report related to small-business problems connected with the Small Business Administration and those pertaining to Government procurement, loans, and disposal activities.

During the early days of the first session of this Congress, this subcommittee conducted a searching inquiry into all of the operations of the Small Business Administration in order to disclose the degree of efficiency attained by its staff under current management, the effectiveness of its operations, and the needs for strengthening or improving the basic act. It was the intent and purpose of the subcommittee to develop full and comprehensive information concerning the activities of this Agency and their effect upon the related problems of small business in order that appropriate recommendations thereafter could be made to the Committee on Banking and Currency and the House of Representatives. Eight days of hearings were held during March and April 1957, at which evidence was elicited which proved to be of valuable help to the membership of the House in connection with their ensuing debate regarding the merits of proposed legislation dealing with this Agency.

Turning to other fields, it can be reported that the subcommittee carried out a number of field inspection trips and conferences. Such meetings were held in Los Angeles, Calif., Seattle, Wash., and Hawaii. Basic subjects covered in these field investigations were:

First. Certain problems of small business in the financial assistance field.

Second. Problems of small business in Government procurement.

Third. The operation and efficiency of the Small Business Administration in disaster areas.

In general, the subcommittee found that small business is not receiving its fair share of Government procurement, is not receiving equal or equitable opportunity to compete in Government business, and is being squeezed by the tight-money policies. In the tidal wave disaster area in Hawaii, the subcommittee found that unfortunately the Small Business Administration had not performed its mission in an expeditious manner. However, as a result of the findings and report submitted to the Small Business Administration by the subcommittee covering its investigation in Hawaii, the program was accelerated and the victims of the disaster received assistance somewhat seasonably.

The subcommittee has received reports and has been advised that as a result of these field trips, the Small Business Administration has improved upon its administration of business loans and procurement in the regional areas visited in California and Washington.

In making these field trips it was learned that the small-business man who cannot come to Washington to tell his story to Congress was extremely anxious to voice his opinion on these important problems to the visiting members of the subcommittee, and was definitely grateful for being given the opportunity of doing so.

As a part of its work in studying the problems affecting small business flowing from Federal Government procurement policies, the subcommittee gave special study to a case arising out of Atomic Energy Commission procurement. The case originated as a result of a letter from a small-business man complaining to the committee that it had not received a proper opportunity to compete for furnishing the Atomic Energy Commission with the item in question and that the bid of the successful bidder was neither responsive nor was the bidder responsible. The subcommittee in studying this procurement problem carefully reviewed all information made available to it by the complaining small business concern and the Atomic Energy Commission. The Commission failed to supply the committee with all of the information requested but upon the basis of all of the information that it did receive, the subcommittee concluded that the Atomic Energy Commission was not fair in its treatment of the complaining small business concern. It was found that the Commission had not taken into consideration the sums of money invested by this small business concern, the establishment of a plant which was more than satisfactory, that it had met all of the requirements of the Commission, that it

had never failed in its delivery of goods and had never defaulted at any time on any of its prior contracts with the agency. Nevertheless, the Atomic Energy Commission, in disregard of these factors, made the award to a less qualified bidder. The subcommittee requested that the Atomic Energy Commission, in the handling of similar future procurements, advertised, and set the same aside for small business. The Commission failed to give assurance to the committee that it would accede to that request. Therefore, the subcommittee has recommended that in the future procurements of this kind be by sealed bids and set aside for small business.

SUBCOMMITTEE NO. 3

This subcommittee is composed of Hon. SIDNEY R. YATES, of Illinois, as chairman; Hon. JOE L. EVINS, of Tennessee; Hon. ABRAHAM J. MULTER, of New York; Hon. TIMOTHY P. SHEEHAN, of Illinois; and Hon. R. WALTER RIEHLMAN, of New York.

The matters referred to this subcommittee for study, investigation, and report related to developments arising within the minerals and raw-materials industries which affect small business.

Since January of this year the attention of the subcommittee has been devoted to those situations adversely affecting small business which stem from recurring shortages of certain basic raw and strategic materials, such as aluminum, copper, nickel, steel, and so forth. The facts are that from time to time during the past several years these shortages have arisen, and during these periods of time it is imperative that steps be taken to make sure that small business is permitted to obtain its fair share of the short supply. This is true because the minerals and materials in question in many cases are vital to the continuing operation of the small companies affected.

It appears that the shortages in question arise due to a variety of developments, including accelerated industrial expansion, newly discovered uses for the materials, stockpiling for national defense, and so forth. Evidence and information thus far supplied the subcommittee indicate that our stockpiling programs at times have had an adverse effect upon small- and medium-size manufacturers, fabricators, and processors. There are further indications that our national policy pertaining to our domestic mineral and metal industries is unrealistic and has contributed to a situation causing smaller manufacturers and processors to face a price squeeze on semifabricated and semifinished products.

The subcommittee has agreed that an investigation should be conducted covering the aluminum industry, with particular reference to the stockpiling programs and the overall importance of aluminum on small business. Problems involving the supply and usage of aluminum scrap, insofar as they affect small business, are now being considered. Contracts entered into between the Government and the integrated producers of aluminum respecting the new and expanded facilities will be scrutinized and, in addition, the privileges granted to the producers to place unlimited supplies of basic aluminum in the stockpile will be reviewed.

SUBCOMMITTEE NO. 4

This subcommittee is composed of Hon. TOM STEED, of Oklahoma, as chairman; Hon. ABRAHAM J. MULTER, of New York; Hon. JAMES ROOSEVELT, of California; Hon. HORACE SEELY-BROWN, JR., of Connecticut; and Hon. CRAIG HOSMER, of California.

The matters referred to this subcommittee for study, investigation, and report related to problems found within the aircraft industry affecting small business.

The aircraft parts industry is largely, a small-business industry. It is composed of firms which make a countless variety of parts, pieces, components, instruments, and so forth, which go into the assembled aircraft.

Changes in types of aircraft, as well as other weapons, always produce a severe impact on small contractors. Renegotiation, taxation, and financing are continuing problems. There are other problems of course; for example, at this time the effect of the cutback in the manufacture of military aircraft recently announced by the Department of Defense is expected to pose serious problems for all segments of the aircraft industry, including both the large aircraft companies as well as their smaller subcontractors.

The staff of the subcommittee has been instructed to observe and study the effects that these cutbacks may have on small business within this industry. In the past, when other cutbacks have occcurred, large manufacturers canceled their contracts with many small subcontractors, thereby causing severe hardships, considerable unemployment, and bankruptcies. The subcommittee plans to conduct an investigation and hold hearings during the coming session of Congress covering these problems.

SUBCOMMITTEE NO. 5

This subcommittee is composed of Hon. JAMES ROOSEVELT, of California, as chairman; Hon. TOM STEED, of Oklahoma; Hon. CHARLES H. BROWN, of Missouri; Hon. TIMOTHY P. SHEEHAN, of Illinois; and Hon. CRAIG HOSMER, of California.

The matters referred to this subcommittee for study, investigation, and report related to distributional problems effecting small business.

This subcommittee received many complaints from distributors of petroleum products concerning alleged coercion and discriminatory practices applied by the major oil companies, as well as the destructive effects of gasoline price wars. Wholesalers, independent refiners, and producers, as well as dealers, voiced their grievances.

It was decided that an investigation of the distribution practices in the petroleum industry should be made. Thereafter hearings were held in Washington on April 10, 11, 12, and 13, 1957, in Denver on April 16, 1957, in Los Angeles on April 24, 25, and 26, 1957, and in Chicago on April 30 and May 1, 1957.

As a result of the investigation and the hearings, the subcommittee issued its interim report—House Report No. 1157—which received the unanimous approval of all the members of the committee.

During the hearings in Chicago, efforts by the major oil companies to dictate retail gasoline prices in the South Bend, Ind., area were disclosed. This led the Department of Justice to initiate a grand jury investigation.

In its report, the subcommittee outlines a further suggested program in regard to the problems still unresolved in the petroleum industry to which attention is being directed at this time.

In addition to all of the foregoing, the subcommittee received a considerable volume of correspondence concerning a variety of problems relating to the distributional field in industries other than the petroleum industry. Generally, these complaints and inquiries constituted reports concerning alleged practices in restraint of trade being applied by manufacturers in a variety of industries. Replies were transmitted to all such parties and wherever possible helpful information supplied. The subcommittee is continuing to devote attention to the matters thusly received with the view in mind of determining whether investigations and hearings should be undertaken.

SUBCOMMITTEE NO. 6

This subcommittee is composed of Hon. CHARLES H. BROWN of Missouri, as chairman; Hon. JOE L. EVINS, of Tennessee; Hon. JAMES ROOSEVELT, of California; Hon. WILLIAM M. MCCULLOCH, of Ohio; and Hon. TIMOTHY P. SHEEHAN, of Illinois.

There was referred to this subcommittee the task of studying, investigating, and reporting upon practices and conditions existing in certain food industries for the purpose of determining whether the facts are as alleged that changed patterns and methods and distribution, coupled with business practices and relationships of a few large concerns, are operating to "ruin the smal operators." Almost immediately the subcommittee announced plans for investigation and hearings regarding the poultry industry. It had received numerous complaints from small poultry hatcheries, processors, dealers, and feed manufacturers to the effect that business practices of their larger competitors and other factors to which reference is made above were destroying the small and independent businessmen in the poultry industry. The investigation led to hearings which were held during May, July, and August 1957.

The testimony and other materials which were made a part of the record during the course of the hearings throw considerable light on the changing patterns and methods of production and distribution in the poultry industry and the concentration of the industry in the hands of large operators, as well as the business practices and the relationships of those operators with one another and their effect upon smal business. Copies of the testimony adduced at these hearings have been printed and distributed.

A report dealing with the facts of that record is in the course of preparation and when completed it is expected to contain not only the subcommittee's

findings as to the facts but also conclusions and recommendations. The report should be available before the end of 1957.

The problems covered by this investigation are of relatively recent origin and therefore it is fortunate for all concerned that the subcommittee has seen fit to conduct this study at this particular time. So often it develops that information revealing changes or new trends in an industry are brought to light too late to permit corrective measures to be taken seasonably. Not so in this case and accordingly there is reason to believe that highly beneficial results may be expected to flow from the hearings which this subcommittee has conducted. This conclusion is buttressed by the observations of several important members of the industry who thanked the subcommittee for its timely interest in their problems and for the highly objective and constructive fashion in which the proceedings were conducted.

"Why Should Food Spoil While They Hunger?"—Comments on Congresswoman Sullivan's Food Stamp Bill To Distribute Surplus Commodities to Needy Americans

---

EXTENSION OF REMARKS
OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mrs. SULLIVAN. Mr. Speaker, those Members of the House who voted earlier this year against adding my food stamp bill to help needy Americans to the law for giving away surplus food to people and nations abroad will find their position backed up and supported by Secretary of Agriculture Benson, who apparently believes all Americans are prosperous and well fed.

When asked recently at a news conference whether he had changed at all from his bitter opposition to the Sullivan bill, he said he thought the whole idea unnecessary and extravagant.

He acknowledged that a food stamp plan for distribution of surplus commodities to the needy had worked well in the final years of the great depression prior to World War II, when, he said, "people could not afford to buy good food" but that it was entirely unnecessary now in this period of prosperity and high employment.

Those of our citizens who must get along on public assistance—those who are on aid to dependent children, aid to the blind, aid to the disabled, and so on, as well as those on local relief rolls—will be curious, indeed, to know how they are to afford good food on, say, $50 a month. Mr. Benson does not say.

I am heartsick over the defeat of the food-stamp plan this year, but I certainly intend to keep pressing for it next year. I am encouraged by the support voiced for my plan during the House debate on this issue by the chairman of the House Committee on Agriculture, Mr. COOLEY, and by many other Members concerned for the welfare of the low-income American family.

SHOULD NOT BE PARTISAN ISSUE

As we know, the vote by which my amendment was killed this year was in the Committee of the Whole House on the State of the Union, under procedures by which the names of the individual Members and how they voted were not recorded. Had the legislative situation been such that I could have succeeded in my attempt to obtain a rollcall vote on the issue, I am positive the result would have been different. Very few Members, I believe, would care to be recorded as voting against a proposal to channel some of this vast surplus to people in our own country we know very well are hungry—actually not getting enough to eat.

Although the vote was not recorded, we do find in the CONGRESSIONAL RECORD a reference to the fact that only one Member of the House from the Republican Party—Mr. SAYLOR, of Pennsylvania—defied Secretary Benson and the Eisenhower administration's cruel position on this matter and voted in support of my amendment. I am appreciative of Mr. SAYLOR's courage and help. I know that many residents of his congressional district have benefited from distribution of some of this surplus food in the past, and thus he knows of the good it can do.

Mr. Speaker, this should not be a partisan issue and I was sorry to see it made into one. Every Republican Member of the House has some people in his district who needs some of this food. Every person on relief, on public assistance of any type, would be eligible for food stamps under my bill and would receive them automatically, with no costly administrative redtape. I hope that next year, when I am assured we will receive an opportunity to go into this plan on its merit rather than as a amendment on other legislation, Republicans as well as Democrats will be found voting for it. Among Democrats, I am pleased to say, my bill has widespread and wholehearted support.

It has also received outstanding support from one of the greatest newspapers in our Nation, the St. Louis Post-Dispatch, and I include now two editorials on my food-stamp plan, H. R. 949, and on the recent developments in connection with it, as follows:

HUNGER IN THE LAND

The inching up of the cost of living may have made some Americans less inclined to boast that "we never had it so good," but in general they are well fed, well clothed, well housed. In general, for there are roughly 6 million persons on relief. (And all the needy are not on the public-assistance rolls.) These people go to bed hungry despite all the food in Government warehouses. Why?

That is the question which Representative LEONOR SULLIVAN, of St. Louis, has been asking in Congress more and more insistently since she first proposed her food-stamp plan in 1954. This has again been sidetracked in the House. This time she offered it as an amendment to the bill which authorizes the distribution of surplus food abroad, and it was narrowly rejected as irrelevant. Now she has carried her appeal to the Senate Committee on Agriculture, asking:

"Perhaps I should not be emotional about this. But I just cannot help being heartsick over the contrast between the food we have and can grow and the hunger we have in our midst—all these hungry people. I mean hungry; I don't mean going without sirloin steak and fresh oranges; I mean hungry. Just try to feed even one person, and pay rent, and keep body and soul together, on $55 a month. We have misery and poverty and hunger, and mountains of spoiling food. Why can't we get this food to those we know need it?"

Mrs. SULLIVAN knows, of course, that some surplus food is being distributed to needy Americans by the Department of Agriculture. But she also knows that this is being done on such an unsatisfactory basis that only 10,366 Missourians have received an occasional sack of flour or beans even though 232,909 Missourians are on the public-aid rolls. She knows that no surplus food has been sent to Arizona, Delaware, Florida, Georgia, Hawaii, Idaho, Montana, Oregon, North Carolina, the Virgin Islands, Washington, and the District of Columbia. She knows, too, that Pennsylvania, which has taken more of this food than other States, is planning to refuse more of it as too expensive.

The chief objection has been to the Department's demand that the receiving States—or their relief agencies—accept shipments and then pay the storage charges until the food is distributed. As part of her food-stamp plan, Mrs. SULLIVAN would have the Department pay these charges at the distribution points, instead of only at the points of origin as it must do under the present law.

This would mean some increase in storage and shipping costs. There also would have to be more processing and packaging since wheat, for example, could be distributed only in the form of flour. It is hard to say how much more expensive this would be than the food surplus program to which the Government now is committed. But granting that food stamps would cost more, is it truly more economical to let food spoil than to pay the cost of getting it to the hungry?

Why, then, is the plan not given at least a trial? Will the Senate force the House to take a second look at a sensible suggestion for reducing the hunger in our land?

SECRETARY BENSON AGAINST FOOD STAMPS

Secretary of Agriculture Ezra Taft Benson has again vetoed a food-stamp plan such as that proposed by Representative LEONOR SULLIVAN, of St. Louis. The Secretary acknowledged that this device for distributing surplus foodstuffs had worked well "when people could not afford to buy good food," but he said there is no need for it in a period of prosperity and high employment.

Such assistance certainly is not needed by the prosperous and the employed. But what of the millions of Americans—and there are literally millions of them—on meager public assistance programs? It is these that Mrs. SULLIVAN has in mind. Prosperity and its accompanying inflation only make life harder for those who are trying to keep body and soul and family together on about $50 a month. Why should food spoil while they hunger?

The food-stamp plan, of course, would add somewhat to the cost of the farm price program since wheat can be used by the needy only in the form of flour. But a nation which taxes itself to keep up the farmer's income might be willing to tax itself just a trifle more to help the distressed. Or does Secretary Benson doubt this? If so, he could say as much instead of intimating that everybody is prosperous.

TEXT OF H. R. 949

Mr. Speaker, the provisions of H. R. 949 for a food stamp plan are as follows:

[85th Cong., 1st sess., in the House of Representatives, January 3, 1957, Mrs. SULLIVAN introduced the following bill; which was referred to the Committee on Agriculture]

H. R. 949

A bill to provide for the establishment of a food stamp plan for the distribution of $1 billion worth of surplus food commodities a year to needy persons and families in the United States

Be it enacted, etc., That in order to promote the general welfare, raise the levels of health and of nourishment for needy persons whose incomes prevent them from enjoying adequate diets, and to remove the specter of want, malnutrition, or hunger in the midst of mountains of surplus food now accumulating under Government ownership in warehouses and other storage facilities, the Secretary of Agriculture (hereinafter referred to as the "Secretary") is hereby authorized and directed to promulgate and put into operation, as quickly as possible, a program to distribute to needy persons in the United States through a food-stamp system a portion of the surpluses of food commodities acquired and being stored by the Federal Government by reason of its price-support operations or other purchase programs.

SEC. 2. In carrying out such program, the Secretary shall—

(1) distribute surplus food made available by the Secretary for distribution under this program only when requested to do so by a State or political subdivision thereof;

(2) issue, or cause to be issued, pursuant to section 3, food stamps redeemable by eligible needy persons for such types and quantities of surplus food as the Secretary shall determine;

(3) distribute surplus food in packaged or other convenient form on the local level at such places as he may determine;

(4) establish standards under which, pursuant to section 3, the welfare authorities of any State or political subdivision thereof may participate in the food-stamp plan for the distribution of surplus foods to the needy;

(5) consult the Secretary of Health, Education, and Welfare, and the Secretary of Labor, in establishing standards for eligibility for surplus foods and in the conduct of the program generally to assure achievement of the goals outlined in the first section of this act; and

(6) make such other rules and regulations as he may deem necessary to carry out the purpose of this act.

SEC. 3. The Secretary shall issue, to each welfare department or equivalent agency of a State or political subdivision requesting the distribution of surplus food under section 2 (1), food stamps for each kind of surplus food to be distributed, in amounts based on the total amount of surplus food to be distributed and on the total number of needy persons in the various States and political subdivisions eligible to receive such food. The food stamps shall be issued by each such welfare department or equivalent agency to needy persons receiving welfare assistance, or in need of welfare assistance but ineligible because of State or local law, and shall be redeemable by such needy persons at local distribution points to be determined by the Secretary under section 2 (3).

SEC. 4. Surplus food distributed under this act shall be in addition to, and not in place of, any welfare assistance (financial or otherwise) granted needy persons by a State or any political subdivision thereof.

SEC. 5. In any one calendar year the Secretary is authorized to distribute surplus food under this act of a value of up to $1 billion, based on the cost to the Federal Government of acquiring, storing, and handling such food.

SEC. 6. The distribution of surplus food to needy persons in the United States under this act shall be in place of distribution to such needy persons under section 32 of the act entitled "An act to amend the Agricultural Adjustment Act, and for other purposes," approved August 24, 1935 (7 U. S. C., sec. 612c), as amended, and section 416 of the Agricultural Act of 1949, as amended: *Provided, however*, That nothing in this act shall affect distribution of surplus food presently provided for in such sections other than to needy persons as defined in section 7 of this act.

SEC. 7. For the purposes of this act, a needy person is anyone receiving welfare assistance (financial or otherwise) from the welfare department or equivalent agency of any State or political subdivision thereof, or who is, in the opinion of such agency or agencies, in need of welfare assistance but is ineligible to receive it because of State or local law.

SEC. 8. The Secretary of Agriculture, in consultation with the Secretary of Health, Education, and Welfare and the Secretary of Labor, shall make a study of, and shall report to Congress within 6 months after the date of enactment of this act, on the feasibility of, the costs of, and the problems involved in, extending the scope of the food stamp plan established by this act to include persons receiving unemployment compensation, receiving old-age and survivors insurance (social security) pensions, and other low-income groups not eligible to receive food stamps under this act by reason of section 7 of this act.

SEC. 9. There are hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the purposes of this act.

The Tobacco Program

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. COOPER. Mr. President, far-reaching changes in existing farm price-support programs have recently been proposed. These programs, of course, are a central part of our total effort to protect, stabilize, and increase farm income so that farmers may share more fully in, and contribute more effectively to, the general prosperity and economic welfare of our country. Their effectiveness concerns us all, and I do not doubt that new approaches to the farm problem will be widely discussed and considered in the next session of Congress.

In view of the widespread interest in this subject, I have prepared a point-by-point appraisal of the price-support program of greatest interest to the farmers of my State—the tobacco program. In it I discuss some of the achievements of that program, and analyze the reasons why a separate and distinct price-support plan is needed for tobacco. I believe my prepared address on this subject presents basic facts, and that these facts clearly call for the continuation of this program which has been such an outstanding success.

In order to make these facts conveniently available in more concise form, I ask that a brief summary of the full statement setting forth my position on this matter be included in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

HIGHLIGHTS OF SPEECH BY SENATOR JOHN SHERMAN COOPER ON THE TOBACCO PROGRAM

The price of tobacco is a matter of vital concern to some 200,000 rural Kentucky families, because it directly affects their income, their standard of living, and their future opportunities. That price is determined not alone by the well-established demand for quality cigarette tobaccos, but also by the effective operation of the production-control program for tobacco—through which growers cooperate with their Department of Agriculture to maintain a balanced supply in line with that demand. This plan of controlling the supply, so that farmers may realize the benefits of the demand for their tobacco, has proved itself workable, effective, popular, economical, and fair to all segments of the industry and to the Nation as a whole.

The tobacco program is in a class by itself. For example, it is the one program having fixed supports, at 90 percent parity, established by law. Yet, tobacco is not subsidized. Effective production control has made 90 percent support work for tobacco—to the advantage of growers, the Federal Government, and taxpayers. In fact, while billions have been spent in honest efforts to solve the problems of a lagging farm economy in general, the tobacco farmer has stuck to his program of balancing supply with demand.

The only question involved here is whether three-quarters of a million farmers, working together, are entitled to the help and assistance of their Government in carrying out the program of their choice so long as they keep that program sound. My answer is that their performance in good faith entitles tobacco growers to the continuation of their present program. I oppose lowering supports for tobacco.

We have this distinct tobacco program today because the production, marketing, and consumption of tobacco itself is in many ways unique. It therefore requires a different price-support and production-control program. I will describe here 11 of the basic differences which both require a separate program for tobacco and make that program workable.

First, tobacco is a high-labor crop. A full year and 410 man-hours of labor are required to produce an acre of Burley. When 4 or 5 baskets of Burley from that acre are set out on the warehouse floor, a year of the farmer's toil, hope, and fears is sold at auction. Our tobacco growers must depend, then, to an unusual degree on their price-support program.

Second, tobacco production is not mechanized. The technological revolution in agriculture as a whole has scarcely affected tobacco. The second acre costs the farmer nearly as much to raise as the first. It takes more, not less, labor to raise an acre of tobacco today than 15 years ago. Support at 90 percent of parity is needed to provide tobacco farmers a decent minimum-wage floor.

Third, tobacco is an intensive crop. Its high value per acre makes it well suited to our small family farms. The average Burley allotment in Kentucky, although only 1.37 acres, last year produced over a ton of high-quality cigarette tobacco—worth $1,400 to the farmer and enough for 2 million cigarettes.

Hundreds of thousands of farmers owning modest family farms are therefore able to rely on their tobacco allotment as a

major source of income. These are the men who know tobacco best—and who produce the world's finest tobacco. I do not believe they will agree that it is worth less than parity, or that their years of experience and months of toil should be sold cheaper.

Fourth, tobacco is a highly specialized, regional crop. Its peculiar dependence on soils and climate makes rigid allotments based on historical production patterns more equitable than for other crops. Tobacco producers feel that this program, in which they join together in a cooperative effort to comply with the law of supply and demand, provides them essential freedom in the market place to sell their product for what it is worth.

Fifth, our cigarette tobacco is sold exclusively through central auction markets. This system, developed after years of trial and error and travail, works well. It makes possible a firm price floor, not only supporting the tobacco crop as a whole, but under each farmer's individual lots of tobacco. The farmer is the direct beneficiary of this support operation—receiving immediately 90 percent of parity in cash. The whole operation is handled without loss by farmers' marketing cooperatives under contract with the Commodity Credit Corporation.

Sixth is the limited field of buyers for tobacco. As I stated in 1948, when the Congress adopted my amendment first establishing in law 90 percent of parity as a separate provision for tobacco, the major buyers competing for the tobacco offered by 750,000 farmers can be counted on the fingers of both hands. "The farmer who has spent a year in back-breaking toil to produce a crop of tobacco, which is his cash crop and his principal source of income, must sell his tobacco to one of the few buyers, or else lose his year's labor. The Federal Government offers through its parity and support-price program the only substantial assurance the tobacco growers have that they will receive a reasonable price for their product."

Seventh is the excellent storage quality of cured tobacco, which, in fact, increases in value as it is aged. Without a fixed level of support, however, this very storability would operate to the farmers' disadvantage—as it did for the hundred years when 1 year of good prices was followed by 2 or 3 years of starvation prices.

Eighth, there are no alternative uses for tobacco. In other crops, flexible supports may be used to seek alternative uses and new markets. Tobacco has no such opportunity. However, the single-use market does give farmers a clear demand-supply picture so they can support, and do support, a program which meets these realities, and which gives each of them a fair share of the market at a fair price.

Ninth is the relatively inelastic consumer demand. Consumer demand plays a minor role in determining the price farmers receive for their leaf. Also, farm price plays a small part in retail price. For the tobacco in a 25-cent pack of cigarettes, the farmer gets only 3½ cents. I believe American consumers are willing and able to pay our farmers this very reasonable price for their tobacco.

Tenth, the tobacco program does not result in burdensome Government-owned stocks. CCC does not own a pound of tobacco. Tobacco is not subsidized. The program has, in fact, made several million dollars in interest profits on CCC loans. This remarkable record must be credited to the farmers who have made the sacrifices necessary to keep their part of the bargain in this program. The Government can do no less than to keep its part of the bargain and maintain 90-percent support prices so long as growers continue to demonstrate their willingness to keep this program sound.

Eleventh, tobacco is the only farm commodity on which excise taxes are imposed. Federal and State revenues from the growers' efforts ($2 billion yearly) are about double the return to the growers themselves. Thus, while operation of our price-support program for tobacco has not cost the Government anything, tobacco has brought immense revenues to local, State and Federal Governments. This fact surely merits continuation of a tobacco program which insures stable prices and balanced supplies.

The most eloquent testimony as to what farmers think of their tobacco program is found in the referendum votes—where the growers have approved burley and flue cured marketing quotas by 95 to 98 percent in all the elections held since 1948. Here is what the tobacco program has meant to farmers in dollars and cents: Burley prices tripled, and the value of the crop to farmers increased six-fold from $40 million to one-quarter billion dollars in the first 15 years of the program. These gains have been improved in recent years, so that last year the burley crop sold for the highest prices on record—averaging 63.5 cents a pound for a crop which brought farmers $322 million. The current flue-cured crop is also bringing record prices.

Thanks to the joint efforts over many years of a great many conscientious and devoted people, and to the active cooperation of tobacco farmers everywhere, the tobacco program has been conspicuously successful. I believe it is a basically sound, helpful and essential part of our total farm program today. I believe it can continue to serve faithfully and well the tobacco growers of my State, the rural economy of the South, and hence the general welfare of our country.

In support of this position, I can do no better than to quote the President's Agricultural Message of 1954. President Eisenhower stated then: "Tobacco farmers have demonstrated their ability to hold production in line with demand at the supported price without loss to the Government. * * * It is recommended that the tobacco program be continued in its present form."

The record of accomplishments since that time fully justifies the President's faith in our farmers and in this program. No more dramatic demonstration of farmers' willingness and ability to keep their tobacco programs sound could be asked than the substantial production adjustments made by both burley and flue-cured growers in the last 3 years. The President's conclusion, therefore, is still valid. And I believe his recommendation is as sound today as it was 3½ years ago.

Week After Week, Dun & Bradstreet Reports the Largest Percentage of Bankruptcies Among Companies With Liabilities Between $5,000 and $10,000—Small Firms by Any Yardstick

---

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, the weekly average of business deaths has increased to 272, far above the average of any year since World War II. Failures so far in 1957 are close to the 10,000 mark. The toll of weekly failures is now climbing above the depression era level set in 1939. In fact, this is the first year the 1939 record of the depression years has been challenged.

Week after week, Dun & Bradstreet reports the largest percentage of bankruptcies among companies with liabilities between $5,000 and $10,000—small firms by any yardstick.

Only recently Miss Porter and the Journal of Commerce reported that administration leaders in Washington were saying, in effect, that "what we need to end the wage-price spiral in this country is a little recession, and the quicker it comes the better."

Now, it appears, the administration is getting its wish.

I include here an article by Sylvia Porter from the Washington Evening Star on this thoroughly alarming situation:

CHRISTMAS IN JULY

(By Sylvia Porter)

"The President's tax proposals for the benefit of small business make me feel as though Christmas had come in July for small business," exulted Small Business Administrator Wendell Barnes the day after President Eisenhower had sent one of his restrained, ineffectual letters to Congress asking for minor tax relief for small business.

Christmas in July? Or August? Or September? Or etc.?

Every prediction for small business bankruptcies in 1957—even the most somber—will have been topped by the year end.

The weekly average of business deaths has increased to 272, far above the average of any year since World War II. Failures so far in 1957 are flirting with the 10,000 mark.

The toll of weekly failures is now climbing above the level set in 1939. This is the first year the 1939 record has been challenged.

Just about every field of business is contributing to the statistics. The biggest year-to-year increases in failures are being reported by manufacturing, construction, and service firms, but retailers and wholesalers are failing in large numbers, too.

And week after week, Dun & Bradstreet reports the largest percentage of bankruptcies among companies with liabilities between $5,000 and $10,000—small firms by any yardstick.

NAGGING PROBLEMS

The biggest problem nagging the smaller businessman today is getting capital and maintaining enough cash in his business to permit him to operate aggressively, compete successfully and grow.

So, what's being done?

Beginning today, the Senate Small Business Committee is taking to the road to build up support behind a tax-relief bill in 1958.

It's opening hearings today in Phoenix, Ariz. Then it goes on to Los Angeles, Boston, New York, Chicago, Dallas, Denver, Wichita, Miami, Minneapolis, Oklahoma City, Portland. Senator SPARKMAN, the Alabama Democrat who heads the committee, is certainly trying hard to develop a tax relief bill that will win acceptance in Congress.

But what are the chances of this sort of action? Slim. Any important tax cut next year will go to individuals, not small-business men. There are more individuals who vote, and it's an election year.

ACTION DOUBTFUL

Anything else? Yes, the Federal Reserve Board is making a comprehensive study of the financing problems of small business to see what gaps exist and what might be done. The hope is that the Reserve Board will complete its study in the next 18 months and make constructive suggestions.

What are the chances for action? Slim—for quite some time.

And, yes, there is something else. In Washington between September 23 and

September 25, there'll be a Conference on Technical and Distribution Research for the Benefit of Small Business. Mr. Eisenhower will speak at the conference and so will Mr. Barnes.

This is the situation as the small-business man moves into the cycle of the fiercest competition in decades—a cycle which even the giants are approaching with concern.

And how high, Mr. "Christmas in July" Barnes, do you think the small business failure rate will go now?

Report to the People of New York, Autumn 1957

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my final report on the 1st session of the 85th Congress to the people of New York.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT TO THE PEOPLE OF NEW YORK, AUTUMN 1957

(This is the final report on the 1st session of the 85th Congress. It is the second of this Congress intended to keep citizens of our State informed of my activities, of the work of the Senate and the state of the Nation.)

PROSPECTS FOR PEACE AND FOREIGN AFFAIRS

The most important phase of foreign policy dominating the world scene is disarmament. Since the 1955 Geneva Conference the United States has been working toward a first-step disarmament agreement with the U. S. S. R. I have worked to have included measures to improve the peace machinery of the United Nations, including an established U. N. police force like that now functioning in the Near East. Our country continues to insist on U. N. inspection and control in some form as essential to any secure plan for disarmament or ending nuclear-weapons testing.

Congress authorized a foreign-aid appropriation of $3,435,810,000. The new Mutual Security Act has as its principal feature a $300 million economic development fund on a loan, rather than a grant basis; $1.9 billion for military assistance; and $725 million for defense support.

The 900,000 Arab refugees from Palestine remain as the most nettling problem in the Near East and their resettlement is a prerequisite to a permanent, peaceful solution there.

Plans must be accelerated for alternates to the petroleum supply routes in the Middle East on which 70 percent of free Europe's oil supply depends, presently threatened by Communist infiltration and subversion in Syria, Egypt, and Yemen.

If we are to resolve the struggle against communism without war, the foreign-aid program is indispensable to our national security and must be adequate to meet the tremendous task. Our foreign economic policy must emphasize international trade expansion and Congress should approve joining the Organization for Trade Cooperation. The Syrian crisis, the Soviet claims to an intercontinental ballistics missile and developments at the London disarmament conference underline these hard realities.

I sponsored legislation which passed calling for a special study by Government and private industry of the barriers to international travel with a view to its increase.

In line with the President's historic 1953 atoms-for-peace proposal, the Senate ratified the treaty for United States participation in the International Atomic Energy Agency. Due safeguards for the national security are included and I opposed efforts to weaken our participation.

I have protested constantly the situation of Americans held prisoner by Communist China contrary to international law.

I introduced a measure to promote the interchange of students with the European Soviet bloc countries to help break down the Iron Curtain and promote people-to-people understanding.

AGRICULTURE

About $3.6 billion was appropriated for the Nation's farm programs for this fiscal year. The soil-bank program, a major effort to reduce farm surpluses without wastefully high Government price supports, has been continued for another 4 years.

I joined in sponsoring the Agricultural Research and Industrial Act of 1957 for the increased use of agricultural products for industrial purposes, a necessity if we are to reduce our vast farm surpluses.

The $50 million Federal flood indemnity insurance program failed of passage. Though the Senate approved $14 million, the House eliminated it. I hope next year we will be successful with this program as we have affected areas in New York.

BUDGET AND TAXES

The 1957 fiscal year was concluded with a surplus of $1.6 billion. This has been applied to reducing our $270.6 billion national debt, the interest on which comprises some 10 percent of the budget.

In appropriations for the current fiscal year Congress cut some $4.9 billion from Presidential requests. I supported budget cuts where I believed they were consistent with the national interest.

The Senate passed S. 434 requiring Federal budget estimates on an annual accrued expenditure basis, a Hoover Commission recommendation.

Legislation was passed restricting rapid tax amortizations to new or specialized defense and for research and development facilities for defense, in line with recently adopted administration policy.

Hearings commence January next on legislation to revise the tax structure. It is hoped that the Congress will be able to give relief to small business, those on pensions and individuals of moderate income, where such relief is most needed.

CONSUMERS

Inflation is a major domestic problem; and calls for the unremitting corrective effort of every legislator. I am sponsor of the resolution authorizing the Senate Interstate and Foreign Commerce Committee to study consumers' services of the Federal Government and how they may be best utilized for lower living costs. I fought for lower interest rates and lower FHA downpayment requirements to ease the heavy burden imposed upon those who wish to purchase their own homes. As a member of the Small Business Committee, I have been active in efforts to fight against economic monopolies and oligopolies which prove so costly to the consumer. Also, I am sponsor of legislation for a Federal Department of Housing and Urban Affairs.

CIVIL RIGHTS AND CIVIL LIBERTIES

The most significant action this session was the passage of the civil rights bill, the first such legislation enacted in over 80 years. This bill provides (1) a six-member bipartisan Commission on Civil Rights, with subpena power, to study any deprivation of voting rights and to appraise civil rights laws and enforcement; (2) an additional Assistant Attorney General for civil rights enforcement; (3) action at the discretion of the Attorney General for an injunction in the Federal courts to stop interference with the right to vote in Federal elections; (4) that Federal judges may issue orders to safeguard equality in the right to vote under State laws; and (5) extending to many Negroes in the South the opportunity to serve on a Federal court jury. A compromise provision was adopted permitting a judge in criminal contempt to fine up to $300 or imprison up to 45 days without a jury; in all other criminal contempt actions a jury is required upon request of the defendant.

While the civil-rights bill fails to do all it should to secure equal civil rights, it is an effective step ahead in the key area of voting. It contains a practical, constitutional solution to the jury amendment. I shall continue to seek other civil-rights legislation essential to our people and our times.

The O'Mahoney bill designed to protect FBI files as a result of the Jencks case, has been enacted into law. I worked with Senator O'MAHONEY to insure that the bill would not be unconstitutional, to make clear its purposes to deal with statements or reports made to a Government agent and to make airtight the safeguards against a "fishing expedition" into FBI files.

The Special Subcommittee on Senate Rule XXII, the filibuster rule, of which I am co-chairman, held extensive hearings and a report is soon to be forthcoming. Rule XXII should permit full debate but bar filibusters designed solely to block congressional action. The recent one-man filibuster during the civil-rights debate—the longest on record—emphasized the need for reasonable changes.

Congress passed amendments to the Virgin Islands Organic Act giving its popularly elected legislature greater authority. This is another forward step to full self-government.

SOCIAL SECURITY, EDUCATION, AND HEALTH

By an amendment which I supported, New York State policemen and firemen may now obtain social security coverage on the same basis as other State and local employees after a referendum.

The time for disabled persons to file to preserve old-age, survivors, and disability insurance has been extended to July 1, 1958.

The House of Representatives killed the $1.5 billion Federal aid to school construction measure, thus preventing Senate action. Assistance to school construction in areas of special Federal activities like Army camps, however, was continued for 1 additional year.

I supported passage of authorizing grants to the States to aid nearly 1 million mentally retarded children of school age. Only 15 percent of these are now receiving help. I am working on a proposal for a national health program to give all our citizens an opportunity for medical care through cooperation fostered by the Federal Government within the private economic system.

HOUSING

The fight in which I actively engaged to achieve lower downpayments on FHA home purchases under the new Housing Act was successful; thus on a $15,000 home, the downpayment is now $800 instead of $1,950. The new housing law also authorizes $1.99 billion for housing programs of various types, including $965 million for new lending authority for the Federal National Mortgage Association to provide a secondary market for home mortgages; $350 million for urban renewal or slum clearance grants to cities; $25[illegible] million for mortgages on housing adjacent to military establishments; $175 million for college housing mortgages; $100 million for cooperative housing mortgages; and $150 million for a special Presidential fund largely for mortgages on housing for the elderly and families displaced by slum clearance.

Instances of flagrant maladministration of title I slum clearance projects in New York City have been disclosed. I am following closely the investigation of the Federal Housing and Home Financing Agency of the former Manhattantown project, to see that the public is fully apprised of the results and if new legislation is needed.

Housing starts, now at an annual rate of 1,000,000, are the lowest in 5 years and insufficient to take care of new family formations and necessary home replacements; the subject demands constant attention.

IMMIGRATION

The compromise immigration bill which was overwhelmingly passed permits an estimated additional 60,000 immigrants to come to the United States. The new law provides during the next 2 years for unlimited entry of alien orphans adopted by United States citizens; grants nonquota status to spouses and children of skilled aliens following to join their families; gives the Attorney General discretion to grant visas to aliens previously convicted of minor crimes or afflicted with TB; gives discretion to the Secretary of State and the Attorney General to waive visitors' fingerprinting; authorizes issuance of 18,655 visas, under the expired Refugee Relief Act of 1953, to German expellees, Dutch refugees, refugees in the Far East and persons escaping persecution by the Communists and includes an amendment of mine and others including Egyptian and other escapees from the Middle East. It terminates the mortgages placed on immigration quotas by the Displaced Persons Act.

The new law does not regularize the entry on parole of 25,000 Hungarian refugees here as a result of the anti-Communist revolt last fall—a serious omission. In addition, it fails to start modernization of the quota system and elimination of inequities in the present McCarran-Walter immigration law as advocated by the President, a whole host of voluntary organizations and millions of Americans, and contained in legislation of which I am a cosponsor. This is a No. 1 objective for the next session, vital alike to justice at home and our peace leadership abroad.

NATIONAL DEFENSE

The U. S. S. R.'s announcement about its development of an intercontinental ballistic missile (ICBM) and the termination of the London disarmament negotiations without tangible results intensify consideration of our present national defense policy. While we emphasize defense and offense with modern nuclear means we cannot omit means to deal with local Communist aggressions or to contribute our share to U. N. police action.

I have been urging action on the Cordiner committee report for modernizing the compensation system for our Armed Forces personnel. This is vital to training and retaining the skilled personnel modern defense requires.

I am working with other Senators and the Army to see what can be done to facilitate transfer into a 6-month program of men drafted for 2 years.

I was a cosponsor of the bill to increase Federal help to State maritime academies or colleges, such as Fort Schuyler, which passed the Senate. Also, there was enacted a law to provide career incentives for badly needed nurses and medical specialists in the Armed Forces.

Congress continued reduced travel fares for servicemen on leave; a measure I originally sponsored in the House of Representatives.

LABOR

Disclosures by the McClellan committee of misuse of union funds, racketeering in labor-management relations, and other abuses continue. I am supporting the President's proposal for protective regulation of union welfare funds to help assure honest and effective administration for the benefit of the working people. The Senate passed a bill providing for public disclosure of financial reports and other statements filed with the Department of Labor under the provisions of the National Labor Relations Act. Also, assurances of internal democracy and grievance machinery is vital to the future of industrial statesmanship in trade unions.

The President has appealed to labor and management for self-discipline to hold back inflation. Walter Reuther has suggested his $100 per car price-decrease plan and the motorcar companies have asked for a wage-increase standstill. The problem is clear in any case and I shall support policy declarations and legislation effective to deal with it.

Modernization and improvement in pensions, annuities, benefits, and other factors in the laws governing railroad retirement are past due, considering costs of living and wages today. Hearings have been held on this necessary legislation but further action will wait until means are found to finance the increased expenditure. I supported actively the railway-brake bill, for greater safety, which passed the Senate.

NIAGARA POWER AND NATURAL RESOURCES

A major accomplishment this Congress was the enactment, after a 7-year effort, of legislation, sponsored by Senator IVES, myself, and Representative MILLER, authorizing construction by the New York State Power Authority of the $532 million self-financed power project at Niagara Falls as allowed by the 1950 United States-Canadian Treaty. The law provides fair preferences for power to defense needs, public bodies, nonprofit cooperatives, and neighboring States; while allotting adequate power to replace the loss from the 1956 Schoelkopf disaster, and for the industrial needs and development of the Niagara frontier.

The full development of Niagara power is one of the greatest concepts of economic development in our country. Joined with the St. Lawrence power development it should stimulate tremendous growth in the underdeveloped areas which exist even in our great Empire State.

In legislation authorizing Government assistance in the domestic development of atomic energy for peaceful purposes I supported the middle position which finally prevailed. It provides Federal help for research and pilot-plant development, gives electric cooperatives a chance to participate, but encourages commercial development of ultimate production facilities.

I opposed the $500 million Hells Canyon Dam which was to have been financed by the United States as I believed there had to be some finality some time even in Government. The 3-dam privately financed project had been approved by the Federal Power Commission and the courts, after the Senate had rejected the federally constructed dam in 1956 and had proceeded with extensive construction estimated at $50 million. I could not find an adequate justification to flood out this work.

I supported the Fryingpan-Arkansas project as the reclamation and power factors involved indicated Federal development to be the best alternative.

Legislation to limit billboard advertising on highways constructed with Federal aid remains in committee; it is a problem deserving our utmost consideration.

POST OFFICE AND CIVIL SERVICE

In the closing days of the session the Congress passed measures granting an 11-percent pay raise to Federal civil service and a $546 pay raise to postal workers. I worked actively both in committee and on the Senate floor for passage of this long-overdue legislation and urged the President to sign them. Unfortunately a veto seems indicated and we must do our utmost next year, I believe, with better hope of success.

A measure to increase postal rates as an offset against the $527.5 million annual postal deficit passed the House. Hearings are being held in the Senate to afford an opportunity for all points of view to be thoroughly presented. Responsibility demands action in this matter as it does for pay increases.

SMALL BUSINESS

I am a member of the Senate Select Committee on Small Business and am participating actively in this vital work.

Congress enacted 11th-hour legislation extending the life of the Small Business Administration 1 year, and authorizing an additional $75 million for making small-business loans. It is hoped that next year the Small Business Administration will be made permanent legislation for which I am a cosponsor.

Government contracts set aside for exclusive award to small business increased nearly 50 percent during this fiscal year over the previous year.

VETERANS

Pensions for veterans with service-connected disabilities were increased 10 percent or more. I strongly supported the new provision in the law permitting veterans with a service-connected disability to receive both Veterans' Administration and social-security benefits.

The measure providing an additional $200 million of direct veteran-housing loans by the Government and extending the direct loan and GI mortgage-guaranty programs for a year was passed, but a veto is indicated.

As a member of the Senate Rules Committee, I have been working for the establishment of a standing Veterans' Affairs Committee in the Senate similar to the one in the House.

MATTERS OF SPECIAL INTEREST TO NEW YORK STATE

Bills I had joined in sponsoring were passed to amend limitations imposed by an 1896 law, thus permitting construction of a new shipping terminal in Brooklyn; authorizing a survey of a water route from Albany into Lake Champlain with ultimate connection with the St. Lawrence River; clearing the last obstable to the construction of the Throggs Neck Bridge; and facilitating creation of a Lake Champlain Bridge Commission by New York and Vermont.

I worked in the Rules Committee, of which I am a member, to report out a measure for strengthening our election campaign expenditure control laws; action is expected next year. I joined in sponsoring a measure providing for an official residence and sufficient allowances for the Vice President.

I joined with Senator IVES in special representations to the Senate seeking to protect the interests of the Seneca Indians of New York (granted them by a 1794 treaty) incident to the flooding of lands in the construction of the Kinzua Dam.

The Senate passed Senator IVES' and my bill for additional Federal circuit and two district-court judges to relieve the overcrowded court dockets in the Metropolitan New York area, and I will seek to get this enacted next year. I introduced legislation for national recognition of the Baseball Hall of Fame at Cooperstown, N. Y.

I was active in efforts to retain the Veterans' Administration regional office in Brooklyn, to save the Scotia naval installation in Schenectady, to protect employee rights at the Brooklyn Navy Yard, and similar matters of concern to individual citizens.

CONCLUSION

The thousands of letters from New Yorkers I receive weekly show lively citizen interest in Federal Government activities. These communications serve as an invaluable guide in my work here, and I sincerely hope that the people of this State will continue, as they have for over a decade now, to give me their views on matters of national importance.

Prolonged Illness-Absenteeism

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Journal of the American Medical Association of July 13, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A STATEMENT CONCERNING THE BOOK, PROLONGED ILLNESS-ABSENTEEISM, SUMMARY REPORT, PUBLISHED BY THE RESEARCH COUNCIL FOR ECONOMIC SECURITY, CHICAGO

The American Medical Association was one of over 200 sponsors of the study on prolonged nonoccupational illness among employed persons which was initiated by the Research Council for Economic Security in 1952. Financial support was granted this project on at least two occasions by the board of trustees in view of the objectives originally stated. They were to determine the extent of the problem of prolonged nonoccupational illness, and its impact upon the employed population, and also determine whether measures were necessary to deal with the problem, if one existed, when all the facts essential for the objective evaluation became available.

Such participation in sponsorship and financing in no manner carried with it agreement with or approval of the findings or conclusions of the study. In fact the American Medical Association had no opportunity to review the findings of the study in its entirety, the conclusions drawn, or certain sections of the report prior to publication. Therefore, the American Medical Association cannot be considered as giving endorsement to some of the highly questionable conclusions of this study.

A review of the published report shows that it not only fails to fulfill the objectives as originally stated but draws conclusions which are neither valid nor substantiated by the limited and meager data released for publication. Moreover, there appear to be serious errors of omission, and the data presented could be considered inadequate.

The chief finding that has been widely quoted in the American press is that the net cost of prolonged illness per worker amounted to 13 percent of annual income. On the basis of this publicized finding, moreover, the authors have drawn a basic conclusion, stated on page 14 of the report, "when the illness is serious and a period of disability is prolonged, the financial burden may well be insurmountable. The catastrophe is augmented when such illness involves a worker, a wage earner—faced with both the loss of income and the medical care cost * * *. With these cases multiplied by the thousands across the Nation we indeed, are faced with a social-security problem."

For reasons presented below, there is objection to both the basic finding and the inference which the authors have drawn from it. The 13 percent cannot be other than an inflated figure. Neither the net wage loss per worker nor the net medical care expenditure per worker used in this figure is completely net. In making the deductions from the gross wage loss the authors did not allow for all offsetting forms of compensation; e. g., the income-tax deduction to which the worker would be entitled. With respect to the medical care expenditure, the authors state, when shifting from the average (mean) to median value, that for the average value only benefits from group plans were deducted from gross medical care expenditures, but that for the median value, benefits accruing from individual policies were also deducted. Since neither of the components, wage loss or medical care expenditure, is truly net, the 13 percent can be considered inflated. By how much this figure was inflated, cannot be stated, because the authors themselves did not publish enough data for making such a correction.

An objection may also be lodged against the lumping of the wage loss and the medical care expenditure. In particular, it should be emphasized that the medical care expenditure portion of this cost of prolonged illness was by far the smaller part. When the average (mean) figure of 13 percent is employed, the net wage loss, which was not truly net was more than twice as great (9.3 percent) as the medical care expenditure (3.7 percent), which was far from net. When the cost of prolonged illness is expressed in terms of the median worker, and the netting of medical care expenditures carried out more carefully, the wage loss (6.7 percent) was more than 5 times as great as the medical expenditure (1.2 percent). As a matter of fact, relative to this median worker, the annual medical care expenditure per year for prolonged illness was $41, and this figure refers to only 2.5 percent of all total absence periods. It is believed that this finding, also presented in the final report, flatly contradicts the introductory generalization that the financial burden of such illness is catastrophic and reveals a social-security problem.

Nowhere does the text justify the conclusion that the findings would "Provide the information upon which the in-plant or industrial medical program can plan appropriate measures for nonoccupational disabilities as effectively as they are now caring for occupational disabilities." Nor is it understood how the data provided can show the need for "governmental action at Federal or State levels."

There are many reasons for questioning the adequacy, validity, and use of the data. Tables 30 and 31 on page 77 of the report illustrate a recurring deficiency in the form of excessive use of percentages without reference to the absolute values they represent. The percentages in the same two tables according to their footnote "are based on a subsample," the source and size of which are not given. In table 81 on page 169, and in other tables, the mean and median annual earnings are both represented by the same figure; namely, $3,485. (The mean is another form of average, excessively influenced by a few high values in a distribution. The median, still another form of average, is much less subject to such influence. It is the midvalue above and below which an equal number of cases appear.) Since it would not seem possible for these two kinds of averages to be equal with income so unevenly distributed, it would appear that an error in statistical method has been made. Since this same figure, $3,485, has been used as the basis for computing both the mean and median percentage of income lost through prolonged illness per American worker, it is difficult if not impossible to tell what reliability either of these percentages has and how to compare them.

Tables 32–33 on pages 88–89 are demonstrably incorrect, as any physician or research worker could ascertain by referring to the "International Statistical Classification of Diseases, Injuries and Causes of Death," WHO, 1948. In fact, the so-called WHO numbers appearing on pages 88–89 are not the same as those appearing in Appendix H of the report.

The American Medical Association has always supported and encouraged research to provide objective information on the basis of which the medical profession, the allied professions, and other groups interested in the problem of illness can provide medical care to the American people. Its cooperation with the United States Public Health Service in the current National Health Surveys reflects its continuing interest in the problem of sickness absence. It gave financial support to the Research Council study for the same reason. However, when the reports of the results of research state or imply that the research has fulfilled its objectives, when in fact it has not, the American Medical Association feels bound by its duty to the medical profession and the public to reject such reports.

It is unfortunate that the Research Council did not fulfill or even consistently pursue its own stated objectives of eliciting and reflecting "all facts essential for objective evaluation."

Why Does Organized Labor Oppose Right-to-Work Laws?

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. HOLLAND. Mr. Speaker, the Pittsburgh Central Labor Union Council in Pittsburgh, Pa., each year conducts an essay contest among those graduating from the various high schools in each State senatorial district. The subject of the essays concern the controversial subjects pertaining to the American Labor Movement. The winner of each district is given a 4-year scholarship to the University of Pittsburgh by the State senator of each respective district.

The writer of the following essay received the highest scholarship award by Lieutenant Governor Furman of Pennsylvania.

The interest in these essays is increasing each year, and the result is that the graduating class is doing considerable research and securing valuable information on labor problems.

I think that the reading of this essay by the Members of Congress would be profitable as it clearly demonstrates the thinking of young Americans who shall be the leaders of the America of tomorrow.

The essay follows:

WINNING ESSAY IN PITTSBURGH CENTRAL LABOR UNION, AFL–CIO, SCHOLARSHIP CONTEST ENTITLED "WHY DOES ORGANIZED LABOR OPPOSE RIGHT-TO-WORK LAWS"? BY LEO CZABAN, SOUTH HIGH SCHOOL

From the very beginning of our industrial revolution, workers realized that some kind of security was necessary to protect and secure the objectives of labor. As time went on, labor unions realized the great advancement of industry and worked to bring about the great gains achieved for the workingman which have enabled him to live a respectable life.

Today we are living in the atomic age where labor unions are more significant than ever before in our history, because new problems arise in industry every day and labor unions are needed to serve as a guide for the workingman. The headlines in our newspapers, the propagandists, and the orators tend to make a furious conflict over the right-to-work laws. What are these laws

passed by 18 States and voted down by 17? On one side the argument is that no person should be compelled to join a union. On the other the contention is that those who don't contribute their share are "free riders." Labor leaders are firmly convinced that this right-to-work movement aims to weaken unionism.

Organized labor today stands as an exceedingly strong organization. Its membership is over 18 million people, which is about 22 percent of all the working people in the United States. It took many years of strenuous work to establish this strong organization, which represents this large percentage of the working people, but nevertheless it was done and its principles stand as safeguards for the workingman through the darkest periods of our history.

From the very beginning of the labor union its objectives were: Higher wages, shorter working hours, better safety measures, and paid vacations. These objectives triumphed over the whole world because no other country has such high standards for labor. Before these objectives were put into effect, people were working as long as 14 hours a day with very low wages and little or no security whatsoever, but today the workingman is altogether a different person because labor unions have fought and will continue to fight for his rights. Labor unions have insured peace, prosperity, and wealth during the past few decades of their smooth operation. With the passing of the right-to-work laws, by 18 States, the battle pro and con is on. Secretary of Labor James P. Mitchell said, "In the first place they (right-to-work laws) do not create any jobs at all. In the second place, they result in undesirable and unnecessary limitations on the freedom of working men and women and their employers to bargain collectively and agree upon conditions of work. Finally, they restrict union security provisions and thereby undermine the basic strength of a labor organization." He also states, "I have never quarreled with the right of States to enact such legislation; what I have done is to question the wisdom of the States in so doing."

The right-to-work laws are not only unfair to union members but also unfair to the union by weakening it or eventually destroying it. Under these laws a person may seek employment without joining the union, but the union member has to pay dues to the union and resents the "free rider" who enjoys the benefits but pays nothing for them. This law is altogether unfair for the obvious reason that those people who work without joining the union simply hang on the back of somebody who belongs to the union, and yet they seek and enjoy the same privileges. Surely union leaders are right in seeking to block the spread of the right-to-work movement into additional States and to repeal such laws where they now exist.

Every intelligent person should have realized the danger in the right-to-work laws, but I fear the American people are living too luxuriously to look into this disastrous movement. Many people think that right-to-work laws simply mean the right to work, but what they really mean is the right of workers to earn a living without paying dues to the labor union.

Some people, although they may think unions are fine, feel that it is undemocratic to compel anybody to belong to a union, but we must remember that, under the union shop, it is the employer rather than the union who decides what person shall be hired for a job. An applicant is hired only on the qualification of his education and ability, and after he has been hired, he must join the union within a certain period—usually 30 to 60 days—to retain his job. Unions have nothing whatsoever to say as to whom the employer shall hire. The fact is that in the union shop the majority rule is the very basis of our society and civilization.

Our trade unions have helped Americans to be proud of our country's ability to produce an increasing volume of goods, the greatest the world has ever known. Labor unions have helped to increase buying power of the average worker, because of increased wages and the added protection that unions have won for him. In communities where unions are strong, wage and salary incomes improve, and so the volume of sales improves, too. Where unions are weak, wages are low, and the sales of different commodities are also low.

So-called right-to-work laws, which tend to weaken unions, also tend to weaken their ability to improve the economic status of their members. That's why right-to-work laws weaken the economy of each community. The advocates of right-to-work laws have one fundamental aim—to weaken free American labor unions by denying them their right to gain union security provisions through the collective bargaining procedure. The right-to-work laws have the effect of keeping unions from growing. The right-to-work laws also have another effect—where there are no unions, the pay is low and working conditions poor, and organization of labor unions are very likely to be not accomplished. President Dwight Eisenhower has pointed out: "Only a fool would try to deprive workingmen and workingwomen of the right to join the union of their choice."

The 18 States which now have the right-to-work laws are very small and not highly industrious; for instance: Mississippi, where factory workers earned an average of only $50 a week; and in South Carolina, the average weekly earning of factory workers was $53, so we can easily see that those Southern States cannot affect our economy in the East and Middle East. Their right-to-work laws have been also introduced in our State but we have voted them out for the simple reason right-to-work laws simply do not fit into the American tradition of government impartiality. Unions want justice and equality for both labor and management, but right-to-work laws tilt the scales of justice in favor of the employer against the workingman and this is contrary to our best American traditions. Now Americans have the highest standard of living in the world and this was brought about from our organizations and sponsorship of labor unions. If we want to maintain our high production and standards of living we must outlaw the right-to-work laws and continue to have the union shop where every employee is under the influence of democracy.

An Experiment in the Administration of Adrenalin

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, on August 21 I inserted on page A6891 of the Appendix of the CONGRESSIONAL RECORD a leaflet published by the National Humane Association of Chicago entitled "An Experiment Concerning the Administration of Adrenalin to Cats Which Have Been Skinned Alive" (department of physiology, University of Buffalo School of Medicine).

On the same day, prior to inserting this material, I announced on the floor of the Senate:

"I am a little disturbed, Mr. President, about some of the material I have received from representatives of antivivisection groups. They have asked me to put some material in the RECORD, and, by request, I shall do so.

"In doing so, Mr. President, I want to make it clear to the antivivisectionists that I am not an antivivisectionist. I am in favor of humane policies in animal experimentation. In our medical laboratories I have always taken the position that I did not favor the dissection of animals for any useless purpose. * * *

"Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD certain material sent to me by the antivivisectionist group. I know nothing about the facts, true or alleged, which are set forth in the material, but I think the group referred to is entitled to have this material available for the reading of Senators."

Although the leaflet was inserted with the foregoing precautionary remarks, Prof. Fred R. Griffith, Jr., who was mentioned in the leaflet, objected to the insertion in the Appendix of the RECORD. Professor Griffith supplied me with a report of the actual experiment involved in this case. I ask that this report, designated as "An Experiment Concerning the Administration of Adrenalin to Cats Which Have Been Skinned Alive." (department of physiology, University of Buffalo School of Medicine) be inserted at the conclusion of my remarks.

I assure Professor Griffith that if he cares to supply appropriate comments in answer to the statements contained in the leaflet of the National Humane Education Association, I shall be pleased to include his comments in the RECORD early in the next session.

The report follows:

"A POSSIBLE ROLE OF THE SKIN IN THE EFFECT OF ADRENALIN ON BODY TEMPERATURE AND RESPIRATORY METABOLISM

"(Reprinted from the American Journal of Physiology, vol. 156, No 1, January 1949)

"(By Charles E. Whitcher and Fred R. Griffith, Jr., from the department of physiology, University of Buffalo School of Medicine., Buffalo, N. Y.)

"Administration of adrenalin in physiological dosage to the intact animal invariably leads to increased respiratory metabolism and body temperature, which appear without discoverable dissent to be accepted as cause and effect, respectively. On the other hand, attempts to demonstrate a calorigenic action on isolated tissues have led to results so contradictory as to be completely inconclusive. In the face of this, the idea suggested itself that the uniformity of result in the intact animal might be due to a simple reversal of sequence: increased body temperature due to cutaneous vasoconstriction might be responsible, at least in part, for the increase in metabolic rate. As will be shown in what follows this appears to be true.

"Procedure

"The experiments were made with fasting cats, anesthetized with dial-urethane (Ciba). Oxygen consumption was measured in a closed-circuit system from which carbon dioxide was removed by soda lime. Body temperature was recorded with a rectal thermometer. Freshly prepared adrenalin hydrochloride (Parke Davis) in saline was injected intravenously for 5 minutes at the rate of 0.004 mg/min/kg. body weight. Oxygen consumption was recorded continuously before, during, and for 25 minutes following the injection. Rectal temperatures were

read each minute. Following a normal run, the skin was removed except from the head, feet and tail; all denuded parts were covered with vaseline and cotton. Rectal temperature, which fell during the operation, was brought back to the previous normal with artificial heat; when it and oxygen consumption were stabilized adrenalin was again injected and oxygen consumption and rectal temperature recorded as before.

"Results

"The cats fared well throughout the experimental period. Skinning caused little loss of blood, and had no apparent effect on pulmonary ventilation, blood pressure, pulse rate, or the pressor response to adrenalin. In addition, it seemed to have no effect on normal oxygen consumption, the average for which, in the period preceding injection, was 12.6 in the normal and 12.9 ml/min. in the skinned animals. This small difference probably was related to the slightly unequal rectal temperatures which as a consequence of failure exactly to control body temperature with artificial heat were 38.41 and 39.49° C., respectively.

"Figure I [not printed in the RECORD] shows the average results obtained on 14 animals. Oxygen consumption of the intact animal was increased 7 percent during the 5-minute injection period and 14 percent during the interval 5 to 15 minutes after injection; at the end of the experiment, 25 minutes after injection, it was still 6 percent above the normal. These results gain credence by being almost exact replicas of a previous observation of the effect of the same dosage of adrenalin.[1]

"In the skinned animal oxygen consumption rose only slightly, 4 percent during the 5-minute injection period. The maximum increase, which was only 5 percent, occurred in the 10-minute interval following injection and was followed by a sharp fall to 2 percent below normal 25 minutes after injection.

"As to body temperature, the intact animal showed a rise of 0.03° C. during the 5-minute injection period; this continued to a maximum of 0.11° C. during the first 5 minutes after injection and was still 0.08° C. above normal 25 minutes after injection.

"In contrast, the skinned animal showed an actual fall of temperature, amounting to 0.03° C., during the injection period itself. A maximum rise to only 0.01° C. above normal occurred during the 5 minutes following the injection. This was succeeded by a steady fall, which persisted for the remainder of the experimental period, leading to a temperature of 0.17° C. below the starting normal 25 minutes after injection.

"Discussion

"These results appear to substantiate, at least in part, the hypothesis that cutaneous vasoconstriction in the intact animal by reducing loss of heat through the skin effects a rise of body (rectal) temperature. This, in turn, would be expected to increase the metabolic rate. In the skinned preparation there were no cutaneous vessels to constrict and so to conserve heat. Therefore it, as seems probable, the vessels in the splanchnic viscera were constricted as normally, the blood supply of the exposed striated muscles would be increased with the possibility of augmented heat loss. This could account for the general reduction, rather than increase, of rectal temperature and oxygen consumption in the skinned animals during and after injection. The source of the small increases which still occurred after skinning are being further studied.

"Summary

"A skinned animal preparation is described which appears to be new and which may be useful in subsequent investigations. In this work the calorigenic response to adrenalin shown by intact cats is found to be reduced after the removal of the skin."

The Prepayment Principle in Health Economics

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. HUMPHREY. Mr. President, the Cooperative Health Federation of America had what has been reported to be its finest meeting ever at Two Harbors, Minn., early in July. The well-known executive director, Mr. Jerry Voorhis, summarized the conference in his customarily excellent way in his column, the People's Business, for July 25, 1957.

The distinguished Governor of Minnesota, the Honorable Orville L. Freeman, gave an outstanding address at that conference when he dedicated the community health center at Two Harbors.

I ask unanimous consent that Mr. Voorhis' column and Governor Freeman's speech be printed in the Appendix of the RECORD.

The column and address follow:

THE PEOPLE'S BUSINESS

(By Jerry Voorhis)

In Two Harbors, Minn., two battle monuments have been built. They aren't statues of soldiers or airmen or sailors or marines. They aren't even obelisks. They are neat, attractive buildings dedicated to the health of all the people of a whole area of the north country of Minnesota.

They are a fine, new hospital and a beautiful, medium-sized clinic building.

But they are battle monuments just the same.

Governor Freeman told why when he dedicated the buildings on July 18. He said, "We honor the Community Health Association of Two Harbors as a pioneer in the field of organization to meet human needs. As is true of all pioneers, it had to meet new problems; and it had to struggle against the kind of resistance and inertia that always serve as bulwarks of the status quo.

"This pioneering spirit, this willingness to explore new methods to meet changing needs, this courage to lead the way in the face of long-established methods that no longer serve their purpose, is an urgently needed spirit and attitude in our rapidly changing world of today."

For many years the doctors who were curing the diseases and delivering the babies and maintaining the health of the people of Two Harbors were denied membership in the local medical society. This meant that as membership in the cooperative health plan—Community Health Association—increased it was extremely difficult to persuade new doctors to join the staff.

Now that is changed. The Two Harbors doctors are members of the society. What is more, they compose most of the staff of the new community hospital. And the new clinic is their own place of professional practice. For it belongs to the people whose needs these doctors serve.

Like the battles of Washington, D. C., Elk City, Okla., New York City, San Diego, Seattle, Chicago, and a lot of others before it, the battle of Two Harbors was won by the people. It was won for the right of the people to join cooperative health plans.

The two buildings stand as witness to that fact.

Charles Wilkinson, moving spirit in the early organization of the Two Harbors health plan, presided. Dr. Michael Shadid, who founded the first cooperative hospital in America, was there as honored guest. So was George Jacobson, whose Group Health Association has been the best support of the Cooperative Health Federation—now Group Health Federation of America—through its 11 years since it was founded at Two Harbors in 1946. So was Dr. Dean Clark, president of the federation, general director of Massachusetts General Hospital, and America's No. 1 authority on prepayment health plans. So were representatives of group health prepayment plans and cooperative health insurance plans from all over the United States and Canada. Horace R. Hansen was there, GHFA's legal counsel who guided the Two Harbors plan through its struggle to success. And so were scores of other people from the ranks of labor and from professional associations of the medical professions, and from the rural areas—to see what this was all about and whether and how they could do the same in their communities or for their groups.

There were the ladies of the Two Harbors Community Health Center who by bake sales, by sewing, by every kind of means raised no less than $25,000 to make their own clinic possible.

And somewhere in the background where they didn't belong were two modest men. One was Dr. William Kosiak, for many years the medical director of the Two Harbors plan, the man who stood his ground with the people—and took care of them when it was, to say the least, hard to do. The other was "Bill" Detweiler, the administrator of the Two Harbors plan, who saw on this July 18 the dreams of years of struggle and doubt and worry and care and abuse—come true.

There weren't many dry eyes that crisp, sunny day in Two Harbors.

But the moisture was for joy, not for sorrow. It's good to make the most of it when the people win a battle as important as this one.

THE PREPAYMENT PRINCIPLE IN HEALTH ECONOMICS

(Dedication address by Orville L. Freeman, Governor of Minnesota, on the occasion of the dedication of the Community Health Center, Two Harbors, Minn., July 18, 1957)

At this dedication of the Clinic of the Community Health Association of Two Harbors, we are honoring an organization and a community for its contribution to the solution of one of our greatest human problems—the provision of better health care to more people. At the same time, we are affirming our belief in a method of approach to the solution of such problems—a method that involves voluntary action, cooperation, community participation, and the principles of democratic action.

I am particularly happy to participate in this dedication, not only because of the material achievement represented by the physical plant we are dedicating today, but even more because of the principles it represents. It is particularly fitting that this observance should take place at a meeting of the Group Health Federation of America and of the Group Health Institute. For 11 years ago this summer the Group Health Federation was organized here at Two Harbors—to extend and further the same principles that are being carried out here by the Two Harbors Community Health Association.

We honor the Community Health Association of Two Harbors as a pioneer in the field of organization to meet human needs. As

is true of all pioneers, it had to meet new problems; and it had to struggle against the kind of resistance and inertia that always serve as bulwarks of the status quo.

This pioneering spirit, this willingness to explore new method to meet changing needs, this courage to lead the way in the face of long-established methods that no longer serve their purpose, is an urgently needed spirit and attitude in our rapidly changing world of today. In the field of health, as well as in every field of human relations, we face great changes—changes resulting from rapid growth of population, from revolutionary scientific discoveries, and from the impact of these on our economic patterns and social organization. Human happiness, progress, and well-being depend upon how well we can adjust to these changes. And, therefore, our need for this pioneer spirit is greater than ever before.

In paying this tribute to the pioneers of the Two Harbors Community Health Association, it is only fitting that the tribute be extended to all of the organizations represented here in the Group Health Federation. Each of them has pioneered in its own area, under differing, but difficult circumstances. This, it seems to me, indicates the great possibilities and promise that lie in the Group Health Federation. Motivated by a common purpose, you meet together to share experiences, to help each other, and to give encouragement to others who would join in the task of bringing improved health benefits to more people, under the changing circumstances of the new world of 1957.

In bringing to Minnesota its first plan for complete medical care on a prepayment basis, Two Harbors represents not only the courageous spirit of the pioneer, but also the spirit and principles of cooperation. The doctors in Two Harbors and the people of this community and its surrounding rural area cooperate in a common effort to provide themselves with the kind of prepayment medical care that is usually found only in large metropolitan areas.

I believe the extension of such a program to a rural population is of real significance, and I am happy to learn that the Community Health Association has been awarded this year's citation for its contribution in the rural-health field. We all know how extensive are the wide expanses of rural areas and smaller towns in which medical personnel and facilities are not as readily available as they are in our large cities. And therefore there is a special value in the contribution to rural-health care that we observe today.

I am happy to be able to extend to the association and to this community my warmest personal congratulations on this great achievement. I know most of you personally, and I know of the ability, the dedication, and the hard work that you have devoted to this program. I am confident that you are on the way to even greater success in the future.

I would turn now to the larger field, of which the Community Health Center Clinic is a part. The Group Health Federation of America is of great significance today because it represents an approach to meeting one of our most urgent human needs, through methods that offer great promise. These methods include cooperation, voluntary citizen participation, observance of the highest professional and scientific standards, and the spirit and practice of democracy.

As Governor, I know the value of these methods and principles. It is also part of my business to know how great is the need for health care, particularly as it applies to those for whom the Government shares the responsibility. I am deeply concerned with the maintenance and extension of the principles of democracy and freedom in our Government and in all areas of our society. And I know that the surest way to extend these democratic principles, and to make them secure, is to see that, under their operation, the basic human needs of all of our people are met adequately and effectively.

These principles of freedom and democracy need face no serious threat here in America, unless we fail to extend and make available to all of our people the benefits of our great resources. Certainly our respect for human values, and the ethical and spiritual principles on which our way of life is based, demand that the essential standards of human physical needs—be they food, clothing, shelter, or medical care—should be available to all. We in America can and must offer to all of our people the best care that medical science has developed.

I am sure that there is general agreement on these objectives. But we must constantly ask ourselves how effectively we are progressing toward these goals. Can we improve our methods and our approach? Can we reach more people than we are now?

I would note here only a few highlights with regard to the urgent human need for health. We all know that it is basic to human welfare. We all know that American doctors, hospitals, scientists, and technicians have made astounding progress in their ability to prevent and cure human ills. We are told that in the last decade alone they have added 5 years to the life expectancy of the average American.

You have studied in much more detail than I the extent to which the people are getting the full benefit that our great scientific progress has made possible. Again we all know that these increased benefits mean increased costs, and that, therefore, the cost of medical care is increasing rapidly. Expenditures for physicians' services in the United States have more than doubled in the last 10 years. They are worth these increased costs. And I am sure than on the average, as a whole, and in the long run the American people can afford to pay. But medical care expenses do not affect the head of a family on the average, as a whole, and in the long run. They hit hard, and unexpectedly, and without regard for his ability to pay.

This fact plays an important part in the problems faced by millions of people in securing adequate health care. It makes it imperative for us to consider the importance of prepayment, of some form of insurance in the field of medical care. Statistics, carefully studied and analyzed, can reveal much about the extent of our progress toward our objectives. One little item in the recent Health Information Foundation survey of medical costs and voluntary health insurance is of impressive significance. Among persons in families with surgical insurance there were 7 surgical procedures per 100 persons—among persons in families without surgical insurance, in comparable economic levels, there were 4.

The prepayment principle in health economics is relatively new, yet it has made tremendous progress in the past 10 or 20 years. Plans providing varying, limited amounts of hospital and surgical care, or indemnity for their cost, operated by Blue Cross and Blue Shield and by scores of insurance companies, provide some protection for more than half of the people of the United States.

The value of this kind of protection should not be overlooked. It constitutes genuine progress toward our goals, but it does not represent achievement of those goals. A survey published last year by the Department of Health, Education, and Welfare shows that among families having all types of illnesses the bulk of the average expenditures was for items for which this kind of protection is not generally available. The Health Information Foundation reports that in 1953 only 15 percent of the total medical and hospital charges incurred by families surveyed was covered by insurance benefits.

It is true that insurance is more general when applied to hospitalization and to those very serious illnesses that result in the greatest economic hardship. But, as Dr. Baehr, the president and medical director of the Health Insurance Plan of Greater New York, said last year: "To collect from a major medical expense policy you must usually come close to the pearly gates. This is not health insurance." And he pointed out that while sickness insurance provides financial aid when illness occurs, health insurance should more adequately safeguard health. It should make available the kind of preventive care, and early attention in case of illness, that our most widespread prepayment methods fail to do.

It is in regard to the need for this kind of health care that you in the Group Health Federation are making such a great contribution. I am encouraged by the progress that is being made; by the number and size of the plans represented here; by the quality and extent of the services you provide; by the growing interest that organized labor is taking in plans of this kind; by the instances of cooperation between Government and prepayment health care plans whereby governmental units contribute to the payments made by their employees to such a plan. I am particularly encouraged that here in Minnesota another prepayment complete health care plan is about to begin operations, when Group Health of St. Paul, of which I am a member, launches its program next month.

My greatest concern is whether these prepayment plans, that offer really complete health care, can expand fast enough, and can be extended to enough people, to meet our real needs.

Many of the free countries in Europe have adopted government plans, more or less universal and with some element of compulsory participation, to provide health care. In my judgment, compulsion is never desirable—unless it is essential to achieve a socially necessary goal. Compulsory participation may not be needed in the United States, if voluntary prepayment plans can be extended to meet the need.

I should like to see all possible support and assistance for such voluntary programs. I believe that support and assistance from three sources would be of real value in making it possible to offer voluntary, prepayment, complete medical-care programs to all of the people, on financial terms which they are able and willing to pay.

First, I sincerely hope that voluntary prepayment health-care plans, organized by the people who need such care, will receive the cooperation of the medical profession. The willingness to cooperate that is evident here in Two Harbors, and also in St. Paul, encourage me to believe that clear understanding of the programs involved, and a common dedication to the goal of better health care for more people, will insure such cooperation.

All of your plans, I know, rightly place the complete control of medical care itself in the hands of those professionally qualified to perform this function. But many of your plans provide for lay, or consumer, ownership of the physical facilities; and for consumer participation in the business and economic aspect of the plan. This is not a new and untried principle, but rather one that long experience has proved successful in the operation of hospitals.

More than 90 percent of the hospitals in the United States are owned by the people, either through their governmental units or through churches and other voluntary, nonprofit organizations. The capital invested by the people in these hospitals now amounts to

$3 billion, and is increasing by $200 million a year. If the approximately 100,000 doctors who use these hospitals had had to make this investment themselves, it would have amounted to $30,000 each, and an annual investment for replacement of at least $2,000 each. Obviously this would be neither possible nor desirable. And this lay or public ownership of hospitals has worked very well.

It seems logical to me that this method would be equally applicable to medical care facilities other than hospitals. I therefore believe that a like degree of cooperation can be worked out between the medical profession and those voluntary prepayment plans in which laymen join together to assume the financial burden of providing the physical facilities and the business and economic arrangements for payment.

No other group is more concerned with the extension of better health care than is the medical profession. For that reason I believe that, with adequate understanding and in a spirit of good will, our doctors will extend their indispensable cooperation to any sincere program for extending the benefits of medical services to more people. Such cooperation with prepayment health care plans will insure high standards and the control of professional services by professionally qualified personnel; and will contribute immeasurably to the growth of such plans.

A second source of real impetus and encouragement to voluntary prepayment plans is their support by organized labor—and by other economic organizations, particularly of farmers, that can make a like contribution even if on a smaller scale. Group Health of St. Paul pioneered in providing health insurance to farmers through their memberships in cooperative creameries; and more recently projects are under way to make available such insurance for the first time to farmers through their REA memberships.

Organized labor is, however, taking the lead in gaining for its members more adequate health-care services. In many of the plans represented here, including Two Harbors, labor has played a major role.

In this field, labor, with its millions of members and its growing health and welfare funds, has an opportunity to make a contribution of immeasurable value. It can choose between accepting provisions for ordinary kinds of indemnity insurance (sickness insurance rather than health insurance), or using its great influence to help to organize and build plans that will provide complete health care. It cannot only proceed, through collective bargaining, to provide its members with payment for such care, but it can also, through education, further among its membership an understanding of the importance of preventive and complete care.

Organized labor has also, in this field, an opportunity to cooperate with other groups in the community in a common effort to meet an urgent need that applies to members and nonmembers alike. It can earn for itself greater public understanding. It can develop a more widespread recognition of the fact—that is becoming more and more in evidence each year—that responsible union labor is concerned with more than just bread-and-butter unionism—that it is concerned with achieving for all people higher standards and a better way of life.

A third source of support and assistance for voluntary prepayment medical care plans can come from government.

It is traditional in America for government at all levels to provide protection, service, and assistance of various kinds of private enterprise that is clearly in the public interest. In carrying out this tradition our Government provides protection for the right to do business, and the use of public facilities. In many cases our Government has provided special economic incentives for such enterprises as private utilities, publishers who use the mails, privately own transportation facilities—to note only a few—even though these are profitmaking enterprises. Such Government assistance is justified on the basis that the growth and success of such enterprise will be of benefit to all of the people. I, for one, believe that voluntary prepayment plans offering complete health care are of equal or greater importance to the public interest, and as such they should receive such assistance from Government as is appropriate and desirable.

Government, as an employer, has already demonstrated the assistance it can give to health-care plans by helping to obtain coverage for its employees under such plans. One of the largest of such plans, the Health Insurance Plan of Greater New York, was given substantial impetus by such assistance. I am informed that another of our largest cities, Philadelphia, is now embarking on a program to bring to its employees the benefits of a health-care plan sponsored initially by organized labor in that area. Governmental units at many levels could extend this kind of cooperative participation to voluntary health-care programs.

Perhaps the most challenging way in which government could assist in the expansion of such plans lies in the area of utilizing them in the provision of medical care for some of those people for whose care the various units of government are now responsible.

Many examples of the provision of medical care directly by Government are well known. For veterans, Government provides care in facilities which it owns and operates through the services of physicians and others directly employed by Government. For those suffering from serious and prolonged illness, such as tuberculosis and mental illness, Government has likewise carried nearly all of the burden.

Our State and local governments carry nearly all of the costs of medical care for others who cannot afford to pay for such care. Our biggest problem in this field is with regard to our growing population of older people. In Minnesota the cost of medical care provided under the old-age assistance program is well over $17 million per year, and is increasing at the rate of nearly $2 million a year. Only about 10 percent of this amount is covered by the Federal Government—the State and the counties share in the remaining 90 percent.

All available information indicates that these costs will continue to rise. This is not only because people live longer, but because social security retirement benefits are rarely enough to cover serious medical expense. Thus, while a lower proportion of our older people will be dependent on public aid for ordinary living expenses, more of them will need to depend on assistance in case of illness.

Right now, Minnesota pays for a monthly caseload of about a thousand who need and get assistance for medical care although they have sufficient incomes of their own to cover other living costs. These payments on behalf of men and women who, aside from health care needs, would otherwise be self-supporting, are estimated to be about 7 percent, or $1,200,000, of our medical care expenditures in the old-age assistance program.

In 1956 our medical care costs amounted to 40 percent of our total old-age assistance payments. It is expected that in 1957 this percentage will rise to 43 percent. Estimates indicate that 75 percent of those receiving old-age assistance payments receive medical care payments some time during the year.

I know that other States face similar situations and problems, although Minnesota's burden may be greater than most because we are one of the few States that have no ceiling on medical care for the aged. We provide them with the care they need. And under no circumstances, it seems to me, can we attempt to lighten our burden by adopting a ceiling that would deny them care that they need. But we can, and must, ask whether we could provide that necessary care by a better method.

I am deeply concerned with the many problems related to services for our aging, and I know that health is among the most important. I have urged State matching funds to assist counties and nonprofit organizations to build nursing homes, for this is the biggest single part of the cost of our medical care for the aged. We must also give careful consideration to the most effective and economical way by which we can carry out our responsibility to provide really good health care for our older people.

I hope that we can explore the possibilities of extending the voluntary prepaid medical care principle to a greater proportion of our aging citizens. We should consider whether some assistance should be given toward prepayment charges for those over 65. We should study carefully whether cooperation between government and voluntary health plans might offer a more constructive use of the money we now spend on medical care for the aging. Greater emphasis on preventive care might not only lower the cost, but also contribute materially to the health and happiness of the people involved.

We should also consider whether government should offer assistance to make it possible for other groups of people, such as those in lower income brackets, for whom voluntary plans now seem too costly, to participate in such prepayment plans. Government assistance here would not be a new expenditure, for when illness strikes severely in these groups now the public must assume the major share of their medical care costs. Many in these groups are often described, along with 80 percent of those over 65 years of age, as "medically indigent." I do not like this term, because it applies a description that is resented by most Americans to a situation that could occur to most of us unless we participate in some kind of insurance or prepayment plan. For even in this period of prosperity, very few of us could meet the costs of a catastrophic and prolonged illness (such as, for example, care and treatment for polio) out of current income.

But, by whatever description or term we use, we know there are millions of people whose incomes enable them to meet their needs under ordinary circumstances, but are not large enough to cover the entire cost of participation in voluntary health care plans. There are others who, during periods of unemployment, lose the group coverage they have. If we could devise an equitable and practical method by which government assistance would enable many of these to participate in prepayment plans we would add very little to the cost that government must now assume in cases of illness within such groups. And we might provide for better health care than they now receive, certainly in the preventive field.

Any such program would have to be based on cooperation between the governmental unit involved and the voluntary plans. It could be a kind of partnership between, on the one hand, the people as represented by their Government, and the doctors and the people as organized and represented in prepayment plans. I believe this might develop into a major contribution to success in our efforts to meet human needs.

For we in America have, I believe, demonstrated the value of voluntary action, of the participation of citizens through their own organizations in efforts toward social and economic improvement. We resent anything that is totalitarian or monopolistic or arbitrary. We even dislike the term compulsory, unless it is applied to something universally accepted as necessary for the public good, like school attendance. We tend to decide whether or not Government

all enter any field of enterprise on a real-tic and pragmatic basis—and we do not k Government to provide services the peo-e need unless those services cannot or e not being provided by other means. e try, as I am suggesting here in the field health care, to develop methods of Gov-nment cooperation and assistance in work-g with voluntary and private groups to-rd a socially desirable goal.

I believe that we can—and will—meet the ed of all of the people for complete med-al care, under economic arrangements that volve no undue hardship. I believe that is can be done best by the utilization of e prepayment principle. It must be done a way that insures the highest standards care, and the control of professional serv-es by the doctors themselves. It must available to all without discrimination.

These principles are among those for hich the Group Health Federation of Amer-a stands. You have earned the highest mmendation for your leadership in this eld for the courage you have demonstrated facing tough problems under difficult rcumstances. You have already made in-luable contributions, and are on the way, am confident, to even greater progress.

As we dedicate this clinic of the Two Har-rs Community Health Association, we rec-gnize and pay tribute to one material sign that progress, and we dedicate ourselves intensified effort and greater cooperation ward the achievement of that goal we ll seek—better health for the people of merica.

Economy Versus Spending—Analysis of All Rollcall Votes in the House of Representatives Involving the Expenditure of Federal Funds During the 1st Session of the 85th Congress

---

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. SIMPSON of Pennsylvania. Mr. Speaker, President Eisenhower expected the Congress to effect any possible economy in considering his budget. He never suggested that we approve it without exercising our constitutional responsibilities to examine carefully any proposed expenditure.

If we are to reduce the crushing burden of taxation, further substantial reductions in the budget must be made. The Republican record on rollcalls concerned with economy is good. I have reviewed the 100 record votes during this session of the Congress to see which party really saved money for the American taxpayer. I find that there are 49 of these 100 issues which reflect the position of the Members of the House of Representatives on economy. Immediately following my remarks there is a list of these 49 issues. The votes recorded on these issues have been assembled in a subsequent table. The tabulations speak for themselves.

The Republicans cast 63 percent of all economy votes. The Democrats cast 70.7 percent of all spending votes. The support scores by members of each party show a Republican support score for economy of 68 percent, and an opposition score of 32 percent. The Democratic support score for economy is 34 percent, and the opposition score is 66 percent.

Many will remember the charges hurled at President Eisenhower's budget last January by Democrats. Those who were responsible for committing the Federal Government to long-term spending programs were suddenly going to produce economy for the American taxpayer.

The record has now been completed, and the facts are there for all to read. Once again the record shows that the true advocates of efficient economic government are the Republicans. The Democrats have continued in their traditional role of fostering spending programs which must result in either higher taxes or inflation.

List of record votes involving economy in Government

Record vote No.	Vote for economy position	Description
4	Y	1957 deficiency appropriations (H. R. 4249)—Lanham amendment placing a $15,728,000 limitation on amount to be spent for State and local administration of public-assistance grants. Passed 205 to 168.
5	N	Drought relief (H. R. 2367)—Providing for payment to ranchers for deferred grazing as part of relief available to drought-stricken areas of the Southwest Passage. Passed 270 to 100.
13	Y	1958 appropriations for Departments of Labor, and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $30,000 the appropriation for 3 new positions in the Department of Labor to handle international labor affairs in South America and the Near East. Passed 286 to 126.
14	Y	1958 appropriations for Departments of Labor, and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $204,000 the appropriation for new positions in the Office of the Solicitor, Department of Labor. Passed 241 to 171.
15	Y	1958 appropriations for Departments of Labor, and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $46,300 the appropriation for new positions in the Bureau of Labor Standards, Department of Labor. Passed 246 to 169.
16	Y	1958 appropriations for Departments of Labor, and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $136,000 the appropriation for new positions in the Bureau of Veterans' Reemployment Rights. Rejected 137 to 275.
17	Y	1958 appropriations for Departments of Labor, and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $442,000 the appropriation for new positions in the Bureau of Employment Security, Department of Labor. Passed 214 to 205.
18	Y	1958 appropriations for Departments of Labor, and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $12,186,000 funds for grants to States for unemployment compensation, thus eliminating an increase requested by Bureau of Budget over departmental request and eliminating contingency funds. Passed 220 to 200.
19	Y	1958 appropriations for Departments of Labor, and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $1,500,000 funds for unemployment compensation for Federal employees and provide same amount used in 1957. Passed 253 to 167.
20	Y	1958 appropriations for Departments of Labor, and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $263,800 the appropriation for new positions in the Mexican farm labor program. Passed 342 to 77.
21	Y	1958 appropriations for Departments of Labor, and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $346,000 the appropriation for new positions in the Bureau of Labor Statistics. Passed 217 to 202.
22	Y	1958 appropriations for Departments of Labor, and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $31,000 the appropriation for new positions in the Women's Bureau. Rejected 206 to 210.
23	Y	1958 appropriations for Departments of Labor, and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $288,000 the appropriation for new positions in the Wage and Hour Division, Department of Labor. Passed 214 to 205.
24	Y	1958 appropriations for Departments of Labor, and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $1,327,000 the increase in funds for expansion of the Food and Drug Administration. Rejected 130 to 285.
25	Y	1958 appropriations for Departments of Labor, and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $1,482,000 the appropriation for new positions in the Office of Education. Rejected 206 to 207.
26	Y	1958 appropriations for Departments of Labor, and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to delete language providing $50 million to municipalities for waste treatment works construction. Rejected 185 to 231.
29	N	Committee expenses (H. Res. 191)—Providing $350,000 (in lieu of $100,000) for purpose of investigating studies by House Committee on Interstate and Foreign Commerce. Passage. Passed 225 to 143.
30	Y	1958 appropriations for the Departments of State, Justice, and Judiciary (H. R. 6871)—Amendment to reduce by $7,039,958 the appropriation for the United States share of the cost of international organizations of which we are a member. Rejected 167 to 205.
31	Y	1958 appropriations for the Department of Agriculture and the Farm Credit Administration (H. R. 7441)—Amendment to suspend operation of the soil-bank program at the end of fiscal year 1957 and to delete provisions for $500 million for the 1958 program. Passed 192 to 187.
32	Y	1958 appropriations for the legislative branch (H. R. 7599)—Motion to recommit with instructions to delete $7,500,000 for construction of an additional House Office Building. Rejected 176 to 206.
38	N	1958 appropriations for the Department of Defense (H. R. 7665)—Motion to recommit with instructions to restore $313 million of the committee cut of $2,586,775,000. Rejected 151 to 242.
43	N	3d supplemental appropriations for 1957 (H. R. 7221)—Motion to agree to Senate amendment providing $14 million for initiation of Federal flood-insurance program. Rejected 186 to 218.
47	Y	Senate Office Building (S. 1428)—Authorizing furniture and furnishings for the additional office building for the U. S. Senate. Motion to recommit with instructions that the House Public Works Committee insert specific cost figures. Rejected 135 to 232.
48	Y	Senate Office Building (S. 1429)—Authorizing the enlargement and remodeling of Senators' suites, and other changes and improvements in the existing Senate Office Building. Motion to recommit with instructions that the House Public Works Committee insert specific cost figures. Rejected 148 to 216.
52	N	Veterans' benefit (H. R. 72)—Amending the World War Veterans' Act of 1924 to restrict the transfer of estates of incompetent veterans derived from compensation and pensions. Motion to recommit. Passed 191 to 161.
55	N	Postal pay increase (H. R. 2474)—Providing for a $546 increase in basic salary of employees in the postal field service. Passage. Passed 379 to 38.
56	Y	School construction (H. R. 1)—Providing for Federal assistance to States for school construction. Motion to strike the enacting clause (and prevent further consideration of the bill). Passed 208 to 203.

List of record votes involving economy in Government—Continued

Record vote No.	Vote for economy position	Description
58	Y	San Angelo project (H. R. 2147)—Providing for the construction of the San Angelo Federal reclamation project, Texas. Motion to recommit. Rejected 189 to 202.
59	N	San Angelo project (H. R. 2147)—Passage. Passed 201 to 190.
66	Y	1958 supplemental appropriations (H. R. 9131)—Motion to recommit with instructions to reduce appropriation of new funds for TVA by $9,784,000. Rejected 158 to 244.
69	N	District of Columbia Auditorium Commission (H. R. 4813)—Extending the life of the District of Columbia Auditorium Commission. Adoption of conference report, authorizing the acquisition of certain land for a District auditorium-cultural center. Rejected 115 to 284.
71	Y	Atomic Energy Commission authorization (H. R. 8996)—Amendment deleting $3,000,000 for design and construction estimates of a plutonium reactor. Rejected 197 to 201.
72	Y	Atomic Energy Commission authorization (H. R. 8996)—Amendment deleting $55,000,000 for construction by the Commission of a natural uranium and plutonium recycle reactor. Passed 211 to 188.
73	Y	Atomic Energy Commission authorization (H. R. 8996)—Amendment revising cooperative power reactor demonstration program and deleting provision for Government ownership and operation of generating plants. Passed 213 to 185.
74	Y	Atomic Energy Commission authorization (H. R. 8996)—Passage. Passed 383 to 14.
75	Y	Federal employees pay raise (H. R. 2462)—Providing an 11 percent across-the-board salary increase for classified Federal employees. Motion to recommit. Rejected 70 to 319.
76	N	Federal employees pay raise (H R. 2462)—Passage. Passed 329 to 58.
77	N	Public works appropriation (H. R. 8090)—Making appropriations for civil functions administered by the Department of the Army and certain agencies of the Department of the Interior for fiscal year 1958. (Conference report.) Motion to agree to Senate amendment earmarking $500,000 for preparing plans for Bruces Eddy project on Clearwater River, Idaho. Rejected 23 to 363.
78	Y	Postal rate adjustment (H. R. 5836)—Increasing certain postal rates. Passage. Passed 256 to 129.
81	N	1958 appropriations for mutual security (H. R. 9302)—Motion to recommit with instructions to increase various items by $715,000,000. Rejected 129 to 2
83	N	Air-carrier loans (H. R. 7998)—Providing for Government guaranty of private loans to certain air carriers. Motion to suspend the rules and pass the bi Passed 242 to 94.
84	N	District of Columbia Stadium (H. R. 1937)—Authorizing the construction, maintenance, and operation by the District of Columbia Armory Board of a stadium in the District of Columbia. Adoption of conference report. Rejected 135 to 234.
85	Y	West Virginia Dam (S. 1520)—Providing for the disposal of dam on Little Kanawha River in West Virginia (conference report). Motion to recommit to conference with instructions to insist on House provision limiting Federal contribution to $50,000 as recommended by Corps of Engineers instead of $112,000 as provided in report. Rejected 137 to 232.
86	Y	1958 supplemental appropriations (H. R 9131)—(Conference report.) Motion to recede and concur in Senate amendment striking out funds for construction of an additional airport in or near Washington, D. C. Rejected 125 to 233.
87	N	1958 supplemental appropriations (H. R. 9131)—Motion to agree to Senate amendment providing an additional $475,000 for the Columbia River project. Rejected 141 to 216.
90	N	1958 supplemental appropriations (H. R. 9131) (conference report)—Motion to recede from disagreement on Senate amendment providing an additional $475,000 for the Columbia River project. Passed 166 to 121.
91	Y	1958 supplemental appropriations (H. R. 9131)—Motion to agree to amendment providing for $425,000 for Columbia River project. Passed 165 to 130.
92	N	Air-carrier loans (S. 2229)—Providing for Government guaranty of private loans to certain air carriers. Adoption of conference report. Passed 203 to 77.
100	N	1958 appropriations for mutual security (H. R. 9302)—Adoption of conference report. Passed 194 to 122.

Need for a Protective Tariff Law

EXTENSION OF REMARKS

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. HENDERSON. Mr. Speaker, the 1st session of the 85th Congress has concluded its work without having considered legislation bearing directly upon the tariff policies of the Nation. This is a regrettable omission. However, to those of us who believe that Congress should reassert its constitutional powers over tariff policy, it is not proper to conclude that the tariff issue has been ignored.

Legislation has been proposed to offer tariff protection to our domestic industries which are being harmed by competing products of foreign industries in our local markets. Although formal congressional attention was not given to these bills, there has been, I believe, a significant strengthening of support in the Congress for such bills. One test of this growing awareness that a protective tariff law is needed is obvious when we realize that legislation which would threaten the further lowering of tariffs has also failed to be considered by the 85th Congress. I refer to the proposal that the United States join the international organization known as the Organization for Trade Cooperation.

The passage of the OTC bill has been urged most vigorously in the past 2 years. I believe that the explanation of its that the philosophy of "free trade" which failure to be considered lies in the fact has dominated congressional thinking in the past several decades has lost some of its appeal as more and more Members of Congress have witnessed the economic deterioration in areas they represent because of the application of those "free trade" principles.

The OTC bill, at first glance seems simple and harmless enough. It would allow this Nation to participate in an organization composed of many nations to administer another international entity known as the General Agreement on Tariffs and Trade. Thus, tariff agreements among all of the participating nations could be decided in this international arena.

I have opposed this bill for several reasons. First, because the Federal Constitution specifically gives to Congress the power "to regulate commerce with foreign nations." This power is given in the same clause which makes the Congress solely responsible for taxation. It is unthinkable that the power to tax the American people be delegated by the Congress to the executive branch of our Government or to some international organization. In past years, the tariff power has been delegated to the Tariff Commission, thence to the President, thence to the State Department, and now it is proposed to an organization of nations. The ebbing away of this congressional power becomes even clearer when we realize that although our Nation's tariffs are being affected by the international conferences of the General Agreement on Tariffs and Trade, this agreement which has such an outward appearance of a treaty has never been ratified by the Congress. Thus, if Congress agrees to our becoming a participating nation in the OTC, it is, at the same time, ratifying the General Agreement on Tariffs and Trade.

I do not believe that in the complex world in which we live today that the United States can isolate itself from the

mmunity of nations. We are clearly terdependent in a very large degree for r economic and military security. wever, the zeal with which we have ven away our economic substance in ny programs during the last two dec- es is alarming. The tariff question is ly one aspect of this pell-mell race to ove that we can solve all of the world's oblems and quicken the time when a lcyon state of social and economic well ing for all mankind will be achieved. hile this purpose may be a worthy one, would be better advised to set our als in more realistic terms and preserve is Nation's strength for the long strug- against our enemies who would re- ce us to the roll of peons of the Soviet ion.

In 1955, the extension of the Recip- cal Trade Agreements Act assured the ntinuation of low tariff policies. Many us fought against this legislation in e belief that our international trade licy must prevent the further eroding ay of many American industries. At e international bargaining table, our presentatives have been too anxious to ree to the demands of other nations rmitting them to invade American arkets with an increasing volume of eir products. This was, unfortunately, nored by the Congress when the re- ocal trade legislation was enacted.

In southeastern Ohio, we know well at low tariff policies can mean to com- unities whose economies are struck by mpetition from imported products. ere are few areas of the Nation where is problem is so apparent. In our pot- ries, ceramic tile factories, and coal nes, economic depression in the midst national prosperity has become an forced way of life. What this has eant in terms of hardship to com- unities, families, and individuals in the th Congressional District cannot be erstated.

The extension of the Reciprocal Trade reement Act authorizing bargaining Geneva which resulted in even lower riffs on pottery and tile products. We n predict that even greater damage ll result from this unwise action. For stance, under the Geneva negotiations GATT, the tariff on imported earthen t ware would be reduced 15 percent er 3 years with annual 5 percent re- ctions effective in 1956, 1957, and 1958. ariffs on chinaware, stoneware, and e great bulk of dutiable tile would also affected. This is a direct and serious ow at domestic producers and their nployees already greviously suffering om the effects earlier of tariff reduc- on.

I wish to present for the record, some dication of the amount of foreign-pro- ced household pottery items which ve been and are now flooding our mar- ts. The following figures, compiled in ugust 1957 by the United States Tariff ommission, show the generally increas- g volume of imports into this country:

Household pottery: United States imports for consumption,[1] by kinds and by principal sources, 1954, 1955, 1956, and January–June 1956 and 1957

[Quantity in dozens of pieces, value in thousands of dollars]

Type and year	United Kingdom	West Germany	Italy	Japan	Other countries	Total
	Quantity					
Earthenware household table and kitchen articles: [2]						
1954	977,000	(3)	155,000	2,462,000	227,000	3,821,000
1955	885,000	(3)	187,000	4,662,000	301,000	6,035,000
1956	874,000	(3)	202,000	6,147,000	312,000	7,535,000
1956 (January–June)	421,000	(3)	81,000	3,118,000	122,000	3,742,000
1957 (January–June)	537,000	(3)	91,000	2,395,000	245,000	3,268,000
	Foreign value					
1954	3,027	(3)	708	1,867	646	6,248
1955	2,811	(3)	868	3,158	795	7,632
1956	2,765	(3)	953	4,326	811	8,855
1956 (January–June)	1,325	(3)	346	2,069	340	4,080
1957 (January–June)	1,672	(3)	347	1,968	440	4,427
	Quantity					
Chinaware household table and kitchen articles:						
1954	434,000	552,000	(3)	5,192,000	89,000	6,267,000
1955	516,000	667,000	(3)	5,714,000	73,000	6,970,000
1956	422,000	655,000	(3)	6,826,000	90,000	7,993,000
1956 (January–June)	183,000	289,000	(3)	3,223,000	33,000	3,728,000
1957 (January–June)	202,000	373,000	(3)	3,288,000	52,000	3,915,000
	Foreign value					
1954	3,010	2,823	(3)	6,986	628	13,447
1955	3,100	3,307	(3)	7,866	605	14,878

1956 (January–June)	1,342	1,419	(3)	4,577	262	7,600
1957 (January–June)	1,432	1,713	(3)	4,635	365	8,145
	Quantity					
Earthenware and chinaware art and ornamental articles: [4]						
1954	56,000	161,000	173,000	7,693,000	179,000	8,262,000
1955	79,000	216,000	179,000	8,799,000	169,000	9,442,000
1956	65,000	208,000	212,000	11,508,000	227,000	12,220,000
1956 (January–June)	31,000	87,000	84,000	4,924,000	65,000	5,191,000
1957 (January–June)	48,000	125,000	123,000	5,356,000	116,000	5,768,000
	Foreign value					
1954	649	1,285	1,652	8,003	981	12,570
1955	750	1,481	1,643	8,897	1,148	13,919
1956	689	1,595	1,789	11,233	1,222	16,528
1956 (January to June)	312	692	775	4,865	422	7,066
1957 (January to June)	320	840	786	5,882	659	8,487

[1] Preliminary. Beginning Jan. 1, 1954, the Bureau of the Census discontinued complete compilation of import statistics of certain formal entries (or separably classifiable parts of larger entries) valued at $250 or less. Estimates of these omitted imports, based on an officially tabulated monthly sample of the omitted entries, are included in this table; such estimates represent up to 11 percent of the totals shown above.
[2] Includes small amounts of hotel-type table and kitchen articles.
[3] Included in "Other countries" because of the unreliability of the sample of low-valued entries.
[4] Includes small amounts of earthenware and chinaware other than art and ornamental articles.

For ceramic tile, the following figures show the tremendous increase of foreign imports since 1947:

Ceramic floor and wall tile: Imports (total and by principal sources), 1947–56

[Quantity in thousands of square feet; value in thousands of dollars]

Year	Imports for consumption [1]							
	All countries	Mexico	United Kingdom	West Germany [2]	Spain	Italy	Japan	Other countries
	Quantity							
1947	291	101	49	2	(3)	84	----------	59
1948	241	66	48	----------	9	101	(3)	17
1949	424	17	87	(3)	10	185	121	4

Footnotes at end of table.

Ceramic floor and wall tile: Imports (total and by principal sources), 1947–56—Continued

[Quantity in thousands of square feet; value in thousands of dollars]

Year	Imports for consumption [1]

[1] Beginning in 1954, figures do not include individual importations for immediate consumption that do not amount to more than $250 under a statistical classification.
[2] Includes East Germany prior to 1952.
[3] Less than 500 square feet.
[4] Preliminary.
[5] Less than $500.

Source: Compiled from official statistics of the U. S. Department of Commerce.

What we are witnessing here is a direct challenge to more than the pottery and tile industries. The challenge is to the American standard of living. The prices of these imported products in the domestic market are based upon production costs. I am informed that almost 65 percent of the cost of most pottery items represents the cost of labor. For example, at the prevailing wages of a Japanese pottery worker, his production can be shipped to the United States, undersell the American product, and still produce a fantastic margin of profit for the Japanese pottery producer. The conflict, then, is between the American employee and the foreign worker. The competition is between subsistence or "rice bowl" standards and wages to sustain the decent way of life which has become the standard in this Nation. Unless we revise our tariff regulations in terms of essential human values and competing standards of living, we are by a calculated national policy writing the destruction of any American industry where such forces are brought into play.

This is clearly happening now in the pottery industry. It will become apparent in other of our industries if the past and present trends are not reversed. I can cite the American textile industry as an example where import competition is already causing serious economic dislocations in regions depending upon it for a source of income.

In view of our Nation's unprecedented prosperity, it may seem unusual to express concern in such grave terms. However, I believe we allow our prosperity to obscure the pressing need to come to grips with economic problems carrying serious implications. This is certainly a good example of a national refusal to look around us to understand what is happening. It is long past the time to restudy our tariff policies, admit our past errors, and correct the distress which our trade policy has created. Another opportunity will come early in 1958 when the Reciprocal Trade Agreements Act will be considered again for extension. It is my earnest hope that each Member of Congress will during the next several months study the economy of his own district to understand how existing tariff policies affect the people he represents here. I feel certain, then, that when the battle of our foreign trade policy is joined early next year, the ranks of those opposing a continuation of past policies will number many members who have previously given their support to those policies.

Evolution of Price-Support Program

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. AVERY. Mr. Speaker, the following is a factual report compiled by the Department of Agriculture regarding the evolution of the price-support program:

Price support was undertaken for the first time in 1933 when loans were made on corn and cotton. But the evolutionary process that produced the price-support program started at least as early as 1920, with the collapse of agricultural prices.

1920–28

The severity of the price break that began in 1920 was unparalleled. Already inflated by World War I needs, agricultural prices had been pushed even higher after the end of the war by heavy demands from European countries. In May 1920 the general level, or index, of prices received by farmers stood at 236 percent of the 1910–14 average. P... this peak the decline started. By Septem... the index had dropped to 201, and by Dec... ber to 148. In March 1921 it reached 127 ... by June, 112. Prices recovered some ... the June 1921 low point, but they stayed ... relatively depressed levels for the next ... years, a circumstance which brought ... siderable agitation for farm relief.

Most of the relief proposals revol... around two-price plans, which, in ess... would have provided a price for foreign ... considerably lower than the price for ... portion sold in the United States. Alth... the two-price plans differed in detail, ... theoretical bases were similar: Low ex... prices were expected to expand foreign ... kets for American farm products; the ... creased export flow, it was believed, w... shorten domestic supplies, thereby stren... ening domestic prices; and the blend of ... export prices and high domestic prices wo... it was hoped, mean improved returns ... producers. The two-price schemes propo... in the 1920's went under various name... export debenture plan, domestic allotm... plan, and equalization fee plan. The lat... incorporated in a legislative proposal kn... from its Senate and House sponsors as ... McNary-Haugen bill, was introduced in C... gress five times in various forms. Congr... approved the bill twice, in 1927 and 19... but it was vetoed both times.

1929–32

In the meantime, a proposal to estab... a special Government board to assist farm... in setting up and managing cooperative m... keting organizations had received strong ... dorsement from some groups. This id... eventually was adopted, with passage of ... Agricultural Marketing Act of 1929. Th... legislation provided for a Federal farm boa... "to promote the effective merchandising ... agricultural commodities * * * and to pl... agriculture on a basis of economic equal... with other industries" and provided a revol... ing fund of $500 million for carrying ... these purposes. The Board in its operati... stressed the development of nationwi... farmer-owned cooperative marketing syste... to which it made loans. With the borrow... funds the cooperatives attempted in vario... ways, including advances to farmer membe... on stored commodities, to promote orde... marketing and stabilize prices. When pric... continued to decline, the Board made loa... to stabilization corporations (owned by ... operatives), for the purchase of commodit... chiefly cotton and wheat. Still prices fe... and the stabilization corporations were forc... to acquire larger and larger stocks until ... 1932, with most of its $500 million revolv... fund tied up in commodity inventories, t... oBard discontinued making new loans. ... May 1933 the Board was abolished and ... assets transferred to the Farm Credit Admi... istration.

1933–37

The Federal Farm Board's experie... helped to shape the Agricultural Adjustme... Act of 1933, which provided production co... trols on wheat, cotton, rice, tobacco, ... hogs, and dairy products—the commodit... affected by the act's price stabilizat... features. The controls were implemented ... Government payments to cooperating pr... ducers, the payments being financed out ... taxes imposed on processors of the contro... commodities.

It became apparent within a matter ... months, however, that enhancement of ag... cultural prices and incomes through cont... of acreage and livestock numbers would ... a slow process, and that some immediate ... tion was needed. In this economic clim... the Commodity Credit Corporation (CC... was created under the President's emergen... powers in the fall of 1933 and given w... authority "to purchase * * * hold * ... deal in * * * sell * * * any and all ag...

cultural * * * commodities * * * and to loan * * * money upon the same." The first price-support operations started on a permissive basis in October 1933 when loans were made on corn at the rate of 45 cents a bushel and on cotton at 10 cents a pound. Up to 1938, prices of corn, cotton, tobacco, and naval stores were the only ones that had been supported. In the meantime, however, some events were taking place which were to increase greatly the importance of price support.

The Supreme Court in January 1936 declared unconstitutional the production control features of the Agricultural Adjustment Act of 1933 and also ruled against processing taxes on the ground that they were an inseparable feature of the production control plan. Later in the year, the Soil Conservation and Domestic Allotment Act of 1936 became law; but this act, although it made for improved land use, was inadequate for production control. Heavy crops of wheat and cotton in 1937, accentuating the twin problems of surpluses and low prices, led to passage of the Agricultural Adjustment Act of 1938.

1938–48

The Agricultural Adjustment Act of 1938 which, in amended form, is still in effect, provided for (1) mandatory price-support loans at 52 to 75 percent of parity on corn, wheat, and cotton; (2) when necessary, marketing quotas on tobacco, corn, wheat, cotton, and rice, keyed to acreage allotments, which were intended to keep supplies in line with market demand; and (3) permissive supports for other agricultural commodities. (Curiously, there were no specific upper limits on support for permissive commodities other than the overall objectives of the act, whereas the mandatory commodities could not be supported above 75 percent of parity.)

CCC, of course, already had authority under its charter to support prices of virtually any agricultural commodity—and still has. CCC has supported at one time or another since 1933 prices of well over 100 different permissive commodities, if fruits for processing, vegetables for processing, and various types of seeds are included.

Price support increased in importance during the 1941–48 period, supports being used as an incentive to encourage the heavy production of farm products required to meet war and immediate postwar needs. Supports for the mandatory basics—a list expanded early in the war period to comprise corn, wheat, cotton, rice, tobacco, and peanuts—were brought, generally speaking, to the 90 percent of parity level, although cotton was supported in the 1944–48 period at somewhat higher levels.

Support also was made mandatory during the 1941–48 period on the Steagall commodities, which took their name from the late Henry B. Steagall, Representative from Alabama. Congressman Steagall introduced Federal legislation calling for mandatory supports, first at not less than 85 percent and later not less than 90 percent of parity, on nonbasic commodities for which the Secretary of Agriculture had publicly asked for an expansion of production for war purposes. This support was made mandatory for the duration of the war and for 2 years following the end of hostilities which, as it turned out, meant through December 31, 1948.

1949–54

By 1949 the agriculture of Europe and Asia had recovered to a considerable extent from the disruptions of World War II and foreign demand for American farm products declined sharply. In the meantime, however, crop production in this country had been on the upgrade. This supply-demand situation had several results: Prices received by farmers for their commodities declined, increased support activity became necessary, and surpluses began to build up. Postwar support legislation reflected to some extent the changed economic climate.

Title I, Agricultural Act of 1948, which replaced wartime price-support legislation, maintained rigid support levels for the basic commodities and certain of the Steagall commodities until January 1, 1950, but provided flexible supports for the other Steagall commodities during this period. It extended until June 30, 1950, the fixed-support level for wool.

The Agricultural Act of 1949 authorized and directed even wider departures from World War II price-support patterns. It retained mandatory supports on the basic commodities, but provided for eventual use of flexible-support levels.[1] It wiped out the Steagall classification and made support mandatory at flexible levels for a new list of designated nonbasic commodities—wool and mohair,[2] tung nuts, honey, milk, butterfat, and Irish potatoes.[3] It provided for permissive supports on other commodities.

In June 1950, the free world took action in Korea to stop Communist aggression. The outbreak of hostilities in that country stimulated both domestic and foreign demand for American agricultural commodities. As a result, the general level of prices received by farmers rose sharply, advancing in 1951 about 17 percent above the 1950 level. As prices rose, support activity declined and surpluses began to move. Demand continued strong, and the Department of Agriculture suspended all acreage allotments then in effect, except on tobacco and peanuts. Production goals, which had been initiated for cotton in 1950, to stimulate output, were established in 1951 for a number of other crops.

American agriculture has a high production potential in time of war or peace. Despite shortages of manpower, machinery, fertilizer, and other essentials, output rose steadily and by 1953—when the cease-fire agreement was negotiated in Korea—was considerably in excess of effective demand. Prices received by farmers weakened somewhat; increased price-support activity became necessary; surpluses accumulated; marketing quotas were proclaimed for 1954-crop wheat, peanuts, tobacco, upland cotton, and extra long staple cotton; and acreage allotments were proclaimed for 1954-crop corn.

During the 1950–54 period, support levels for the basic commodities were maintained, generally speaking, at 90 percent of parity.[4] (There was one exception: The price of 1951-crop peanuts was supported at 88 percent.)

1955–56

Surpluses continued to mount. By October 1954, the cost value of CCC inventories exceeded $4 billion. By November 1955 the inventory had a value in excess of $6 billion.

The Agricultural Act of 1954 provided flexible supports for 1955 basics within a range of 82½–90 percent of parity. For the first time since early in the 1940's, prices of wheat, corn, extra long staple cotton, and rice were supported at less than 90 percent. For 1956 crops, supports could range between 75–90 percent, minimums to be based on the supply situation. Supports for all basics except tobacco were established at less than 90 percent.

The Agricultural Act of 1956 provided for a soil-bank program to assist farmers to divert a portion of their cropland from the production of excessive supplies.

The computation of parity and various other parity provisions were affected by the Agricultural Acts of 1948, 1949, and 1956.

Footnotes at end of speech.

Footnotes at end of speech.

Parity price support levels directed or authorized by Federal legislation, 1933–57

BASIC COMMODITIES

Crop years	Commodities	Support levels directed or authorized
		Percentages of parity
1933–37	Corn, cotton	(55–76).[1]
1938–40	Corn, wheat, cotton	52–75.
1941	Corn, wheat, cotton, rice, tobacco	85.
	Peanuts	50–75.
1942–43	Corn, wheat, cotton, rice, tobacco, peanuts	90.[2 3]
1944	Corn, wheat, rice, tobacco, peanuts	90.[3]
	Cotton	95.
1945–48	Corn, wheat, rice, tobacco, peanuts	90.[3]
	Cotton	92½.
1949–50	Corn, wheat, rice, cotton, tobacco,[4 5] peanuts	90.
1951	Corn, wheat, rice, cotton, tobacco,[4 5] peanuts	80–90.[6]
1952	Corn, wheat, rice, cotton, tobacco,[4 5] peanuts	75–90.[6]
1953–54	Corn, wheat, rice, cotton, tobacco,[4 5] peanuts	90.
1955	Corn, wheat, rice, upland cotton, tobacco, peanuts	82½–90.
	Extra long staple cotton [7]	75–90.
1956–57	Corn, wheat, rice, upland cotton, extra long staple, cotton, tobacco,[4 5] peanuts.	75–90.

NONBASIC COMMODITIES FOR WHICH SUPPORT WAS (OR IS) MANDATORY

1933–40	None	None.
1941	"Steagall" commodities: Manufacturing milk, chickens, eggs, hogs [8]	Not less than 85.
1942–48	"Steagall" commodities: Manufacturing milk, butterfat, chickens, eggs, turkeys, hogs, dry peas, dry beans, soybeans for oil, flaxseed for oil, peanuts for oil, American Egyptian cotton, Irish potatoes, and sweetpotatoes.[8]	Not less than 90.
1947–48	Wool	The 1946 support level—42.3 cents a pound for shorn wool, grease basis.
1949	Manufacturing milk, butterfat, chickens, eggs, hogs, and Irish potatoes harvested in the calendar year 1948 and marketed in the calendar year 1949.	90.
	Dry beans, dry peas, soybeans, flaxseed, peanuts for oil, American Egyptian cotton, turkeys, sweetpotatoes, and Irish potatoes harvested and marketed in the calendar year 1949.	Not less than 60 nor more than the 1948 level of support.
	Wool	The 1946 support level—42.3 cents a pound for shorn wool, grease basis.

See footnotes at end of table.

Parity price support levels directed or authorized by Federal legislation, 1933–57—Continued

Crop years	Commodities	Support levels directed or authorized
		Percentages of parity
1950	Milk, butterfat, and products of milk and butterfat	75–90.
	Tung nuts, mohair, honey, wool,[9] Irish potatoes [10]	60–90.
1951–54	Milk, butterfat, and products of milk and butterfat	75–90.
	Tung nuts, wool,[9] mohair, honey	60–90.
1955–57	Milk, butterfat, and products of milk and butterfat	75–90.
	Tung nuts, honey	60–90.
	Wool [11]	Not over 110.[12]
	Mohair [11]	Not more than 15 percent above or below the comparable percentage of parity at which shorn wool is supported.

OTHER COMMODITIES

Some commodities are supported even though supports are not mandatory. Commodities in the "permissive" category, supported at one time or another since 1933, but which are not now supported, include flax fiber, hemp fiber, hempseed, castor bean seeds, olive oil, canned fruits, canned vegetables, concentrated grapefruit juice, hops, figs, dates, prunes, raisins, pecans, walnuts, numerous kinds of hay and pasture seeds, several different kinds of winter cover crop seeds, lamb, mutton, Puerto Rican blackstrap molasses, and sugar beets.

Permissive commodities under support in 1957 include barley, oats, rye, grain sorghums, flaxseed, soybeans, dry edible beans, cottonseed, and crude pine gum. These commodities can be supported at any level between 0 and 90 percent of parity, but supports actually range from 65 to 90 percent.

[1] Support which was nonmandatory, was established at specific cents-per-bushel and cents-per-pound rates. The percentages shown reflect support prices in relation to parity prices. Cotton was not supported in 1936.

[2] The Stabilization Act of 1942 called for support at 90 percent, but sec. 8 (c) of that act permitted support at lower levels in order to hold down feed costs and to aid in prosecution of the war. Corn, wheat, and rice in 1942 and corn and wheat in 1943 were supported at 85 percent of parity.

[3] Mandatory levels shown applied to loans only. Cotton of the 1944 and 1945 crops was purchased for support at 100 percent of parity.

[4] The act of July 28, 1945, specified support on fire-cured tobacco at 75 percent of the burley rate and on dark air-cured and Virginia sun-cured at 66⅔ percent of the burley rate.

[5] The Agricultural Act of 1949 calls for tobacco supports at 90 percent of parity if marketing quotas are in effect.

[6] Because of the Korean war, supports for the basics were held at 90 percent of parity, except that 1951-crop peanuts were supported at 88 percent.

[7] Extra long staple cotton must be supported at the minimum indicated by the supply level as of the beginning of the marketing year.

[8] Although "floors" were set for supports on the Steagall commodities, there were no upper limits on the level of price supports. Some commodities, including flaxseed and soybeans, were supported above 100 percent of parity or comparable price for a while during World War II.

[9] The Agricultural Act of 1949 required support at the level necessary to encourage annual production of 360,000,000 pounds of shorn wool. This provision meant support at the 90-percent level.

[10] Although the Agricultural Act of 1949 made support mandatory for Irish potatoes, the act of Mar. 31, 1950, provided that potato prices could not be supported unless marketing quotas were in effect. Because there was no legislative authority for marketing quotas on potatoes, the act of Mar. 31, 1950, had the effect of prohibiting price support for potatoes. The Agricultural Act of 1954 removed potatoes from the category of designated nonbasic commodities and also repealed the section of the act of Mar. 31, 1950, which prohibited price support on Irish potatoes unless marketing quotas are in effect.

[11] Referred to elsewhere in this publication as "National Wool Act" commodities.

[12] The maximum level is 110 percent if the incentive payment method is used. If other methods are used, the maximum level of support is 90 percent.

[1] As originally enacted, the legislation provided for mandatory supports at 90 percent of parity on any 1950-crop basic commodity if producers had not disapproved marketing quotas for that commodity, and within a range of 80–90 percent on 1951-crop basics, minimum levels, as now, to depend upon the supply situation.

[2] Price support for wool and mohair is now mandatory under the National Wool Act of 1954, not the Agricultural Act of 1949. Wool and mohair, therefore, are no longer considered designated nonbasic commodities.

[3] Although the Agricultural Act of 1949 made support mandatory for Irish potatoes, the act of March 31, 1950, provided that potato prices could not be supported unless marketing quotas were in effect. Because there is no legislative authority for the use of marketing quotas on potatoes, the act of March 31, 1950, had the effect of prohibiting price support for potatoes. The Agricultural Act of 1954 removed potatoes from the category of designated nonbasic commodities and also repealed the section of the act of March 31, 1950, which prohibited price support on Irish potatoes unless marketing quotas are in effect.

[4] Supports at 90 percent of parity were assured under a provision of the Agricultural Act of 1949 for any 1950-crop basic commodity for which producers did not disapprove marketing quotas. Although flexible provisions at the 80–90 percent of parity range became effective for 1951-crop basics, supports were kept at 90 percent, except for 1951-crop peanuts, because of war in Korea. Flexible provisions at the 75–90 percent range became effective for 1952-crop basics, but supports in 1952 again were maintained at 90 percent because of the Korean situation. An amendment to the Defense Production Act provided 90 percent supports on 1953-crop basics. An amendment to the Agricultural Act of 1949, furthermore, made supports mandatory at 90 percent of parity on any 1953- or 1954-crop basic commodity for which producers did not disapprove marketing quotas.

Human Relations: A Plan for Federal Action

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. HUMPHREY. Mr. President, Prof. Jay Murphy, of the School of Law of the University of Alabama, has sent me a copy of his excellent article entitled "Human Relations: A Plan for Federal Action."

I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HUMAN RELATIONS: A PLAN FOR FEDERAL ACTION

Now that the Supreme Court has acted in the segregation cases, it would seem to be clear that more Americans have thought about the crisis in human relations growing from the condition of the American Negro than at any time since the Civil War.

The Supreme Court has done its share. Is there something which the executive and legislative branches of the Government can do? The purpose of these comments is to suggest one thing at least which could be done.

The essence of the matter is that the solution has yet to be found. It must be searched for. Searching for it requires the cooperation of many disciplines, such as sociology, political science, psychology, law, economics, theology, biology, and the creative arts, to mention a few. The courts and policemen offer only partial solutions. Men's minds must be made to think about problems which the men are prejudging—like judges deciding cases without looking at the evidence. There is need for more basic rights legislation, such as was called for by President Truman's Committee on Civil Rights in its report of 1947. But such laws are not the main need. The main need would be to help people see the problem, to understand it, and to communicate about it. Needed laws would flow incidentally from this process. The problem is nationwide. It is taking a grave toll of our human resources. Local areas need help urgently. There is no other help in sight except the slow processes of social adjustment most optimistically viewed, and too much is at stake to await such processes. The Federal Government has clearly the constitutional power to appropriate money and spend it for the general welfare of the Nation. The question is, Do we wish to spend some of our money to search for ways to make democracy real to millions of our citizens and to further make the symbol of democracy real to men everywhere of all races, colors, and creeds?

If the problem is serious enough to warrant Federal action, then what might the Federal Government do? The following is designed to suggest some possible courses of action. The writer fully recognizes that there are others who could do a better job in stating them.

So without more, it is suggested that the Federal Government could set up a Department of Human Relations with adequate funds for regional, State, and local offices, and choose expert personnel to study in every area and in every activity, the whole phenomena of prejudice in the United States growing from race. Such a Department with its vast resources and opportunities for the most skilled personnel could do all those things which a gigantic research and action agency in the field of human relations could do. It could coordinate the activities and lend every assistance to State and county and local agencies, and to private agencies, and persons throughout the land. It could coordinate all the aspects of Federal activities as they concern or touch upon race relations. (Note the term "race relations" is used in these examples because that is the primary concern of these comments. A Department of Human Relations would deal with all questions of basic rights, not just those confined to race relations.) By its mere existence it would aid States in their projects, and give assistance to States not only in technical matters but in making it respectable for the States to consider the questions involved. It could sponsor and arrange or work with meetings of leaders from all parts of the country to get an exchange of views on racial prejudice and promote the discussion of the subject by bringing it out in the open. It could sponsor a series of publications or materials written or compiled so as to be under-

standable by all levels of intelligence in the Nation. It could participate in world conferences on the problem of racial relations in the world, and join with other nations willing to sponsor such programs to bring the problem of racial prejudice before the peoples of the world; thus permitting this Nation as well as others to see their problems in the perspective of the world situation.

It could set up pilot projects of many types. Similar projects in the fields of education, health, economic rehabilitation, and others have been effectively conducted by the United States, UNESCO, Great Britain, and other groups in an intensive attack on critical social, economic, and cultural problems. It could conduct widespread experiments in areas of intense racial prejudice in efforts to find the clues to the eradication or lessening of such prejudice. It could conduct intensive programs of education in racial relations on a scale totally impossible by private agencies. In this connection, it might acquaint citizens with other areas in the world where racial prejudice has been satisfactorily dealt with by developing a program of foreign visits by our citizens. We bring citizens here to understand us. Perhaps we could take some of our citizens there to help them get a different perspective concerning themselves.

It could serve as the central gatherer and analyzer of data for essential legislation on the subject and could be utilized by Congress for special technical services in connection with drafting and advising on legislative action.

It could make available to the unprejudiced in our society the deep motivations of the prejudiced in order that the proper framework of understanding might be possible. It could assist each area through helping with the exchange of people, ideas, and experiences from area to area. The Louisville experience in desegregation of schools is an excellent example of an experience which might be of value in other places. There must be hundreds of other experiences which are to be found in this and multitudes of other areas of race relations which are dying on the vine because they are not known or transplanted into areas where they could be of value.

It could serve as a coordination agency for all groups and institutions today in the United States which are working toward the solution of the race question. The mere seeing of who and what are acting in respect to this matter would be of inestimable value to all workers in the field and to the Government itself. This, likewise, would make people see that thinking and acting in this field can be respectable.

It can go over all Federal agencies with a fine-tooth comb to see how the subject of race relations fits into their activities, thoughts, and objectives, and how they can further the curing of this disease.

It can call a conference of the best minds in the country to explore this gigantic problem in the direction of finding ways to make the role of the Federal Government more effective.

Doubtless, Federal action would not be warranted unless some sound justification could be given for the action. The ultimate test would probably be how the action would fit in with the aims of democratic society today. No one can doubt that progress in race relations has been made in recent years in the United States. Nor can one doubt the intense interest in the subject by institutions, not to speak of the people represented by them, which heretofore have not considered the subject to be of primary concern. Yet, very probably most students of the American Negro's status would agree that vast numbers of them in our society are substantially forbidden from freedom. For example, no one would doubt that vast numbers cannot vote, cannot speak freely about their attitudes and feelings, cannot get preferred jobs, cannot get legal defense, cannot move from place to place without fear of what might happen to them should fortuitous circumstances occur, and cannot look forward to any decent participation in the social, political, professional, artistic, scientific, or other creative life of the community. Doubtless all students would agree that prejudices among people would not disappear if all of them had the same color of skin, yet these same students would agree that the Negro is singled out because he is black. Blackness is the conception which sets off whole streams of impressions about him. Unexamined premises go into gear when blackness is mentioned. It is almost impossible to imagine the creativeness, the discoveries, the happiness, and the strength of democratic society which it is within the realm of possibility for America to achieve by helping this group participate in more of the living processes.

If we recognize the present condition of the American Negro, then can we find further justification in seeking to help him by seeing if his plight fits into the present goals of the United States in world affairs? One need not bother here to wonder at the ultimate reasons why the United States is so active in spending and doing abroad—whether it is to fight communism, to promote trade, to help others achieve their potentialities with the belief that through this new freedom man can live in peace, or whether or not the galaxy of motivations have been thought through in part or in whole by responsible decision makers. Suffice it to say, for our purposes, that one objective of spending billions abroad is surely to help maintain world stability and to create friends and allies. The United States seemingly wishes the people of the world to accept some leadership from it, to like it, to want to live peacefully with it, to have relations with it, and to work and trade with it. To do the foregoing the United States would wish other peoples to look at it and see a nation working for principles of freedom of men to participate in society. At least, to the vast segment of the world's population which is awakening on a scale unprecedented in history, such a wish would seem to be an obvious wish.

Yet, might it not seem strange that with these present and real objectives which the United States must have that practically the whole of the race relations problems is ignored by the executive and legislative branches of the Government? Would one be unreasonable in suggesting that the United States is permitting a hard core of totalitarianism to exist deep within itself? It would be difficult to prove the negative, particularly if one were a white man and awakened one morning and found that the pigments of his skin had for some unknown reason changed to black. Perhaps, the problem on this level is hardly more complex than practicing what one preaches.

Why is there need of Federal action to work with and strengthen local action? Of course, in some areas in the border States, and further beyond the border, there are strong segments of the local population searching and striving for peaceful adjustment. But even in those areas there would seem to be great opportunities for the kind of leadership envisioned by these comments. The need is, of course, on a different scale and of a different nature in the Deep South. An example will perhaps illustrate the point. Those of us in Tuscaloosa, Ala., who work in biracial groups (and we are not local leaders in the sense used here) know that the local level comprising the mass of persons influential in community affairs have not been able to even openly discuss and consider the problems because of elaborate pressures exerted on all of them by persons and groups which they feel would not stop until their businesses and careers were ruined. We likewise know that the mere fact that one is a local leader is no qualification per se of insight into complex questions of human and racial relations. So-called local people need guidance, and assistance, and sustenance and support before they are able to get a good start. Indeed, the exclusive discussion that one hears openly is antagonistic, except for a few still small voices of a small percentage of the pulpit and an occasional fearless newspaper editor. So if the local level leaders cannot meet, cannot openly discuss, cannot communicate, then it would appear safe to say that the local level is almost nonexistent, so far as solving the fundamental issues are concerned.

It is doubtless true that men have mostly justified their action by appeals to some ultimate standard of rightness. How, for example, have local levels reacted to the Supreme Court decision on segregation? They have been inventive in some areas and traditional in others. Antagonism against the Supreme Court is justified by the following (to mention a few): the Court acted unconstitutionally, the decision will lead to impurity of race, abolition of family, loss of jobs for white workers, victory for communism, and it is against the will of God. Now, these are rather strong supports for justifying men's action. Multiply these reactions to the decision with the vast tradition throughout the United States of racial prejudice and include the very real and present danger of failure of law and order, and the reason for assistance to the local level would seem to become more apparent.

Now, the problem is far deeper than one which can be solved by sending Federal troops to guard streets and buildings for a period of time. Federal minds geared to solution seeking and supported with organization and funds for the gigantic purposes are the instruments for solving this problem. Yet, local law and order is one real facet of the problem. Its preservation is indispensable for any ameliorative action. If an American boy or girl were stranded on a floating raft in the ocean, few would feel astonished if the United States sent the Atlantic Fleet, if need be, to the rescue. But if the same American boy or girl were seeking to enter school as very American is now entitled to do, he or she would be virtually alone without protection in almost every community of the Deep South. And those who would destroy this boy or girl and this root of democratic being would say they were doing so in order to preserve the Constitution, family, Nation and will of God. Yet, it is felt that the vast majority of them are as sincere in believing their position is righteous, as is the writer in believing that they weakening themselves, the Nation, and the world.

Is there a precedent for this suggested legislative and executive leadership. Precedents are rarely if ever in exact point. Yet, take the case of workers and employers in the 1930's. When they were fighting and producing chaos in the production and flow of economic goods and other resources of the Nation, the Federal Government established a national, regional, State, and local system to help these groups get together. The prejudices against each other were unbounded. They did not understand each other. They could not communicate. There was no duty to communicate. So, the National Labor Relations Act was adopted. Its success has been phenomenal, as both employers and workers would agree. It has not eliminated all prejudice. But it has made possible solutions of vast numbers of problems among these two groups of Ameri-

can peoples. No one would doubt the vast loss to our society caused by worker and employer antagonism and prejudice prior to the National Labor Relations Act. Yet, even with such astronomical losses which did occur, one might venture to suggest that the losses caused to this Nation by racial prejudice outweigh by far these caused by workers' and employers' inability to discuss their problems. On any scale the writer can imagine (dollars and cents, scope of impact on creativity of the Nation and of individuals, strength of the Nation internally and abroad, strength of national morale, etc.) the racial prejudice losses appear to me to be heavier. What then, one might ask, would a National Human Relations Act do for this Nation?

There are other examples which might be termed as precedents. The Armed Forces, and housing programs, Federal contracts requirements, and President Truman's Commission on Civil Rights all clearly point the direction and set the stage. But the complete job remains to be approached. Many areas exist where the Federal Government has stepped in to further our goals of progress. The arrival at our present position in the world is a symbol of such steps. Securities, food, farms, health, transportation, power, unemployment, to mention only a few, have been subjects which required and received national attention.

One might illustrte an aspect of the problems as follows: At present there is no one whom one might write in the Federal service for extensive help in problems of racial relations. However, if you should have a problem of one chicken in your flock pecking another chicken to death or ostracizing another then you could write to the Department of Agriculture to receive specialized information from an authoritative source. If your old sow eats her pigs you can get much-needed governmental help in diagnosing the psychologic disturbances giving rise to infanticide in sows. Such is valuable information and there is no intention here to suggest the contrary. The device is used here merely as a rather weak way to help look at ourselves from several angles. Somehow when the writer reflects on the Federal function in connection with disturbed chickens and sows his mind appears to approach poetic insights, certainly insights not empirically verifiable, concerning Federal functions in matters of racial relations. He cannot help but think, although he is at least verbally aware of the fallacy of reasoning from chickens and sows to humans, that something is wrong.

To summarize: The time is ripe to actively consider the whole subject of race relations throughout the United States; there are many things which the Federal Government can do; the intimate meaning of a successful handling of this problem is directly associated with achieving democratic ideals; Federal action is indispensable in this national subject matter; and there are ample precedents for this Federal action.

As a beginning, it would be the source of the greatest enthusiasm of millions in the United States (and of many more millions in the world if they but knew about it) if the Federal Government took only the first step of calling in the best-trained specialists in the Nation to study what it could do to help man keep from dissipating his vast powers for creativity, and sharing of experience by irrational hate. This, indeed, would be a point-4 program set in motion which would nourish men's souls and set sparkles in their eyes because it would give men hope. This means men everywhere.

JAY MURPHY,
Professor of Law, University of Alabama School of Law, University, Ala.

The Eisenhower Administration

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, on August 8, 1957, Senator CAPEHART, of Indiana, offered a report on the 4½-year period of the Eisenhower administration. I wish to reprint portions of this report and then to indicate some of the advancements which Kentucky has enjoyed since the beginning of the 85th Congress.

Mr. CAPEHART said in his report to the Senate:

"Mr. President, I believe the facts show that this Nation is well on the way to an even more enduring peace and to an expanding economy which will assure gainful employment and happy, comfortable living for every family making up the rapidly increasing population of our Nation.

"The way to these achievements is not easy.

"On all counts it is fraught with fatal dangers—suicidal war and/or economic collapse, or both.

"That is why we have a weighty obligation to proceed with a maximum of caution and a minimum of strictly partisan consideration toward the enactment of those laws—the establishment of those policies—most likely to avoid ruinous inflation, international chaos, or economic stalemate.

"Thus, it is obvious that the dominant reason for our phenomenal growth is the fact that we established, developed, and encouraged a private enterprise system under which the tenant farm boy of today can become the farm owner of tomorrow; the factory worker of today can become the factory owner of tomorrow; the poor immigrant boy of today can become the leading citizen of tomorrow; and all of us possess the right to progress in proportion to our own initiative and ability.

"Thus, I say that one of the most important accomplishments of this administration has been to restore confidence in and encourage the development of the basic principle of our greatest asset, the American system of Government.

"LABOR HAS BENEFITED

"The national product, national income, and employment are necessarily tied together.

"I mentioned that employment is nearly 67 million, more than 4 million above the same time in 1952.

"Since we are talking about workers, let us see how labor has fared.

"Legislatively speaking, the Republican record shines.

"When Republicans controlled the 83d Congress the following legislation was passed:

"1. Provision for increasing the amount of vocational rehabilitation.

"2. Railroad retirement benefits were increased.

"3. Unemployment insurance was strengthened.

"4. Unemployment insurance was extended to 4 million more employees.

"5. Tax deduction was granted for private pension benefits.

"6. Federal workers were given unemployment compensation and many fringe benefits, including life insurance.

"7. District of Columbia unemployment insurance increased.

"Since that 83d Republican Congress, only 2 of the administration's 13 recommended labor programs have been approved by the Congress, but those 2 can be credited to the Republican administration.

"They were:

"1. Increase from $35 to $50 the maximum compensation benefits for longshoremen, District of Columbia residents, and others in Federal jurisdiction.

"2. Regulation of interstate transportation of migratory workers. The other 11, including revision of the Taft-Hartley Act, went by the boards.

"The lack of progress legislatively after the 83d Republican Congress did not prevent the Department from making a sensational record by enforcement of the laws which existed.

"For example:

"Under the Fair Labor Standards Act and the Walsh-Healey Act the Department recovered $1,250,000 in back wages for workers.

"That's half a million dollars more than in the 4 years before Eisenhower.

"A total of $1,443,800 was recovered under the Walsh-Healey Act, 5 times as much as in the previous 4 years.

"Over $833,000 has been recovered for workers under the Davis-Bacon Act, almost 3 times as much as in the previous 3 years.

"Investigations alone prompted the payment of over $7 million in back wages for 88,800 employees in 14 months.

"From 1950 through 1952 one contractor paid $502 fine for failing to pay his workers for overtime under the 8-hour law.

"In 1956 alone, 19 contractors were found guilty of the same offense and paid fines totaling $22,665. For all 4 years the penalties totaled $41,145 as compared with $525 in the previous 4 years.

"Davis-Bacon enforcement cases under Eisenhower Republicans totaled 1,143 in 3 years and 453 more were started in the fourth year as compared to a total of 476 cases in the previous 3 years.

"From 1935 through 1952—17 years—only 4 contracting firms were blacklisted under the Davis-Bacon Act. Since 1953, 50 firms and 64 individuals have been forced to comply with the law.

"The administration before the present Republican administration took 89 enforcement actions under the Walsh-Healey Act. Under this administration the total is 108 with 35 blacklisted contractors compared to the 17 blacklisted by the previous administration.

"Let me tell you what this administration faced with the farm problem, what it has been doing, and what it is doing at the moment toward a solution.

"FARM RECOVERY

"A decline in farm prosperity took place since the Korean war peak of February 1951, but the parity ratio shows that three-fifths of the decline took place prior to this administration.

"The record shows that in February 1953 the parity index was at 113. It was 94 in January 1953 when Mr. Eisenhower became President. It was 86 in December of 1954, 82 in August of 1956, and 84 in July 1957.

"The drop has been halted.

"The decline was halted in 1956 by increasing wheat price supports from $1.80 to $2 per bushel; by increasing corn supports from $1.40 to $1.50 per bushel; corn grown outside acreage allotments was supported at $1.25 per bushel; rice supports went from $4.04 to $4.50 per hundredweight;

milk supports went to $3.25 per hundredweight; butterfat was raised from 56.2 cents a pound to 58.2 cents.

"Other actions were taken such as:

"Adoption of the soil bank plan.

"Expansion of the barter plan of farm goods for strategic materials.

"Commodity program strengthening through action on corn, rice, sugar, school-milk programs.

"Rural-development pilot funds.

"Great Plains conservation program.

"More research funds.

"Improved loan programs of Farmers' Home and Farm Credit Administrations.

"Tax refund on farm gasoline.

"RURAL ELECTRIFICATION INCREASED

"In the 4 years of the Republican administration of agricultural programs we find a great deal more to boast about.

"The backlog of REA loans was reduced from $192 million to $90 million by faster processing of applications.

"Four times as many loans for rural telephone facilities were made in the Republican 4 years than in all prior years and as a result those facilities have doubled since 1953.

"There has been added to the services of the Farmers' Home and Farm Credit Administration livestock loans to maintain herds in drought and severe weather areas; emergency loans to aid farmers temporarily unable to get credit; soil- and water-conservation loans to aid farmers in developing water supplies.

"The Farm Credit Administration was reestablished as an independent agency and more than $2½ billion in credit was granted in 1955.

"Disaster loans totaled $231 million; large discounts were allowed on 5½ million tons of surplus feed grains; 461 million pounds of beef and pork were bought to stabilize the market after the drought; erosion damage was met with a $21 million program.

"In the Republican 4 years, 494 million bushels of grain-storage facilities were added; 200 million bushels more were added through guaranteed occupancy arrangements with commercial warehouses; producers used Government loans to construct facilities on farms for 142 million bushels; farmers and warehousemen were permitted to charge off storage-construction costs over a 5-year period for tax purposes; many farmers built additional storage through private financing.

"We go on and on with the progress of the Republican administration in developing a farm program aimed at permanent prosperity.

"SURPLUS DISPOSAL

"The Commodity Credit Corporation disposed of over $6 billion worth of surplus commodities from storage.

"Agricultural attachés abroad were placed under the Department of Agriculture to assist in the trade program.

"Stocks of commodities have been offered for export at competitive prices.

"The program to barter surpluses and sell for foreign currency was expanded.

"Farm exports in fiscal 1957 were the highest in history.

"I have always said that if somebody gives you a lemon, make lemonade out of it. The Republicans were certainly handed a lemon in the surplus commodity problem, and they have done a good job of making lemonade out of it.

"What is the farmer's situation today after 4 years of Republicanism in Government?

"Let's have a look:

"Three-fourths of the Nation's farmers today own their farms.

"Farm tenancy is at an alltime low.

"FARM ASSETS $10 BILLION UP

"Total farm assets are more than $170 billion, nearly $10 billion more than before President Eisenhower took office.

"The farm debt is about 11 percent of the assets, a near alltime low percentage of debt.

"Seven of every 10 farmers have no mortgage debt.

"Four-fifths of those mortgaged are mortgaged for less than 50 percent of market value and half for less than 30 percent of market value.

"The farmer now has social security, something he couldn't get for 19 years.

"FOREIGN POLICY—PEACE

"The free world, on the other hand, is growing stronger; closer knit.

"Our friendly nations are growing economically stronger; more able to stand on their own feet; more capable of contributing to western defense against communism.

"Mr. President, I submit it is difficult to argue successfully against a foreign policy which has contributed to such a situation in the free world."

The achievements in my own State are many. I would like to list just a few, which I feel are of outstanding value.

RURAL ELECTRIFICATION ADMINISTRATION

During fiscal 1957, REA approved a total of $18,157,000 in loans to 18 of the 28 active REA electric borrowers in Kentucky. Their plans called for the construction of 925 miles of line to serve an additional 5,136 rural consumers. Five million eight hundred and five thousand dollars of the total amount loaned was obtained by distribution cooperatives. The balance, $12,351,000, went to the Eastern Kentucky Rural Electric Cooperative Corp., in Winchester, for the construction of a 66,000-kilowatt steam-generating plant and transmission facilities. This power-type borrower provides electric power for 16 member distribution cooperatives.

The Rural Electrification Administration, during fiscal 1957, loaned a total of $2,801,000 to 8 active telephone borrowers in Kentucky; there are a total of 16 telephone borrowers in the State. The loan funds will be used for new construction and system improvements to provide improved service to 4,411 additional rural subscribers over 1,011 miles of pole line, 630 of which will be new pole line. At the close of fiscal 1957, Rural Electrification Administration borrowers were providing modern dial service to 16,191 rural subscribers over 8,821 miles of line.

TVA FINANCING

Over the last few years, there has been an increasing reluctance on the part of the Congress to appropriate the tremendous sums needed to increase the power-producing capacity of the Tennessee Valley Authority.

Several bills were introduced this year to authorize TVA revenue bonds. The Senate enacted, and has sent to the House, a bill embodying the main principles of the bill I introduced: limitation on total amount, provision for consultation with the Treasury Department regarding times of issuance, limitation of geographical expansion of TVA, and repayment of the Government's appropriation investment, with interest.

FLOOD CONTROL

The Congress appropriated funds totaling over $40 million for expenditures during fiscal 1958 on flood control and navigation projects benefiting Kentucky. They are as follows:

Examination and survey

Little Sandy River and Tygarts Creek	$30,000
Kentucky River	54,500
Laurel River	19,800
Upper Cumberland	15,000
Cypress Creek	5,000
Clark River	16,100
Lynn Camp Creek	20,000

Advance engineering and design (planning)

Pound Reservoir (Big Sandy)	$140,000
Nolin Reservoir	138,000
No. 2 Barren River Reservoir	50,000
New Richmond lock and dam, Kentucky and Ohio	175,000

Construction

Buckhorn Reservoir	$1,900,000
Rough River Reservoir	3,000,000
Barkley Dam	5,000,000
New Richmond lock and dam	825,000
Catlettsburg floodwall	2,000,000
Greenup locks and dams, Kentucky and Ohio	13,500,000
Markland locks and dams, Kentucky and Indiana	9,500,000
Lock and dam No. 41, Kentucky and Indiana, Louisville	4,000,000

In addition to the 4 new projects included in the above list (New Richmond lock and dam, Pound Reservoir, upper Cumberland survey, and Lynn Camp Creek survey), a local flood protection project is being commenced by the Corps of Engineers at Prestonburg at a cost of $265,000.

RURAL LIBRARY SERVICES

The rural areas of Kentucky have enjoyed the innumerable advantages of the library services program. Through the appropriations made available by the Congress, and the cooperation of private organizations, the circulation of books in the counties of Kentucky has spread from 2 million in 1953–54 to 6 million books last year.

Kentucky's basic allotment for library services was $40,000, but through the appropriation for fiscal 1958 authorized by this Congress, the share of our State will total $137,929. This more than triples the opportunity of bringing books to thousands of people who live in the remote areas and who are not able to share in the service of city libraries.

AGRICULTURE

A number of the actions of Congress this year are of particular interest to Kentucky farmers. In the field of agriculture as a whole, our problems continue to be those of surplus and price, not of shortage and hunger. The two most important legislative acts to lower surpluses and control production in order to protect farmers' income were extension of the Agricultural Trade Development and Assistance Act of 1954, and continuation of the full soil-bank program.

Congress fulfilled a Presidential request when it authorized a 1-year, $1.3 billion expansion of agricultural trade development and assistance, under Public Law 480 which extends this program to June 30, 1958. Authorization for sales of American farm surpluses for foreign currencies was raised from $3 billion to $4 billion, and for gifts to needy nations from $500 million to $800 million. Under its provisions, $111 million worth of tobacco has been sold to 19 foreign countries, and it is expected that the total will approach 200 million pounds by this time next year—in effect increasing our tobacco exports by one-eighth.

The soil-bank program, which seeks to hold production more nearly in line with consumption while protecting farmers' income and guarding future productivity of America's soil, was continued for 1 year. In addition, the provisions of the conservation reserve, of particular interest to Kentucky farmers, have recently been strengthened administratively by increasing some payment rates and making the tree-planting program more attractive.

The administration's new rural-development program is being continued. Kentucky has 3 trade areas covering 25 counties in the rural-development program, centered around the pilot counties of Butler, Metcalfe, and Elliott.

The agricultural-conservation program was continued for 1958 on the same basis as in the past. This long-established pro-

gram, under which farmers receive cost-sharing payments for a number of important conservation practices, was unexpectedly threatened with drastic limitations until Congress encouraged its full continuation.

In a special appropriation near the close of the session, $20 million in emergency agricultural-conservation program funds were made available for rehabilitating farmlands and reestablishing conservation measures on farms damaged by flood and other natural disasters. Fifty-five thousand dollars for this purpose has already been allocated to eastern Kentucky from a previous appropriation, and it is expected that additional amounts will soon be made available.

The Congress passed unanimously a modification of the price-support program for the dark-leaf tobaccos, H. R. 7259. This grower-sponsored measure provides price supports for Kentucky producers of dark-fired and dark air-cured tobacco at the 1957 level, 90 percent of parity, or a percentage of burley parity, whichever is higher. It is already helping to preserve their markets.

Depressed Mining Industry Pinpoints the Cause: Foreign Aid, Foreign Trade

EXTENSION OF REMARKS
OF
HON. GEORGE W. MALONE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful and well-done article from the Reno Evening Gazette. The situation which exists goes back to 1934 when, through the Trade Agreements Act, the constitutional responsibility of Congress to regulate our foreign trade was transferred to the President with full authority to put this responsibility in Geneva where it now resides. At the present time 34 competitive nations are sitting in Geneva regulating our foreign trade, which affects every industry and every product in the United States of America.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A GLOOMY GATHERING

Business conventions are generally regarded as gatherings of cheerful delegates who talk optimistically about their particular endeavors, and nearly always forsee a happy future.

That was not the kind of convention that the mining industry held this week in Salt Lake City. The American Mining Congress closed its 4-day session on a dismal note. The 2,500 industry representatives had talked gloomily about the latest drop in copper prices, the shutdown of the American tungsten mines, cutbacks in the production of lead zinc, and the virtual end of mining of precious metals. It was a sad picture of an industry that once was all powerful in the West.

It wasn't a business depression that reduced the mining industry to its present low state. It was done by the American Government, which is committed to a policy of free trade, and this alone has long worked against the American metal miners and producers. But even more serious is the insensate program of foreign aid, which has built up foreign competition at the expense of American workers and employers, and which has delivered a portion of the domestic market to cheaply produced foreign metals.

And there is no sympathy from Washington, for economic meddlers on a global scale are not concerned with the plaint or plight of an important American industry. They are more concerned with spending millions abroad to purchase doubtful friendships, and to build up competition for taxpaying American enterprise.

East-West Relations

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. HUMPHREY. Mr. President, one of the most imaginative and constructive commentators on our foreign policy in recent years has been Brig. Gen. Hugh B. Hester, retired. Through the letters to the editors of our important national newspapers and through frequent contributions to our public opinion magazines, General Hester has been widely recognized as one of the most provocative commentators on East-West relations. I do not always agree with everything General Hester has to say; on other matters we are in wholehearted accord.

In either case, I am impressed with the value of the contributions he has made to the national thinking.

General Hester has recently returned from the Soviet Union. On August 11, 1957, he sent some of his impressions to me in a personal letter. I believe his comments are worthy of wider attention and ask unanimous consent that his letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the Appendix of the RECORD, as follows:

AUGUST 11, 1957.

DEAR SENATOR HUMPHREY: I have just completed a 12,000-mile, 30-day trip through the Soviet Union which included stops in 8 of her 15 Republics. Naturally a trip of such wide scope within such a brief time does not permit as much detailed study as is desirable, but for whatever it is worth here are some of my observations and comments:

We saw many factories, farms, and cooperatives, including one artel, schools and universities, hospitals and sanatoria, including nurseries and kindergartens. We visited playgrounds in the parks for children, pioneer camps and one children's railway train and operating system. All capital cities and other large towns have these miniature railway systems for training the youth in railway operations. They are not so very small as I took a ride in one of them. This is important for the future of the Soviet Union is backward in its railway system and even more so in its highway system.

We conferred at length with Communist officials, both in the municipalities and at the Republic level, also Komosomol directors, and finished our tour with a 2½-hour conference in the Kremlin with Mr. Khrushchev.

Their two greatest problems are housing and transportation and they will require several 5-year plans and peace to solve them. They are alert to both of these and on the constructive side are currently making a great effort to meet the housing shortages caused by a rapidly increasing population and urbanization, the result of industrialization. The transportation system is perhaps their greatest weakness and we could find little effort at improvement in this field.

We travelled by air, by bus, boat, and rail. Air and bus travel are excellent, boat not so good, and train travel is second and third class. The secondary roads are almost entirely dirt. Eventually they must spend billions and billions on motor and railroad expansion and improvement. They know this and this recognition is no doubt one of the many reasons why so much emphasis is placed upon peace with all nations and people.

At the top on any conclusions about the Soviet Union I would place both the desire for and need for peace. The need gives vitality and genuiness to the desire for peace. There is nothing artificial about this propaganda. Everybody, including the leaders, is sincere about this. This view was confirmed in a conference with one of the ablest and oldest from the standpoint of service of western Ambassadors to the Soviet Union.

The second most important conclusion is that the present regime is stable and can only be overthrown as a result of an unsuccessful world war. The present leaders know this and this fact adds fundamentally to their desire for peace. The damage and cruelties of war are still evident all through eastern European Russia. While the ruins of war have been mostly removed, many of the former buildings have not been restored and the crippled and maimed can easily be seen on all sides. Russia was terribly wounded by the first and second wars, and the civil wars in between.

Every leader, student, and ordinary individual we talked with at every level—and they ran into the hundreds—began and ended on the theme of peaceful coexistence. They really know what war is and want no part of any future war. They are frightened over our encirclement policy and are deeply concerned over statements of some of our officials and military concerning our ability to destroy them. They were deeply appreciative when we told them that the American people wanted peace as much as the Russian people, but they were still apprehensive of some of our leaders.

The deep concern of the people for peace, plus their dire need for it, cannot fail to convey its meaning to their leaders. And their leaders know that the only thing they really have to fear is war. The Socialist system is now just as secure in the Soviet Union as capitalism in the United States. In peace it may be expected to evolve as will capitalism, but barring a world catastrophe it is here to stay.

My third conclusion is that cooperative coexistence is clearly possible and the leadership of the United States should bend all efforts in that direction. It serves no useful purpose to parrot "you cannot trust the Russians under any circumstances" ad infinitum. It is not only not true, but "old hat" in the cold war propaganda game. And it makes no sense to insist that the Marxists publicly denounce their aim as leadership of the world. No great movements, political or religious, has ever done so. Like the Christians who still believe in the second coming of Christ, they have no fixed timetable for its accomplishment after 40 years of struggle in the world of reality.

Mr. Khrushchev, in answer to one of our questions, stated that the greatest aid to peace would be the establishment of normal trade relations with the Socialist bloc. In the course of the interview he expanded this to include trade in ideas and cultures as well as goods and services. He said, also, he would

like to see the two countries exchange students and stated the Soviet Union was prepared to defray the expenses of United States students in Russian universities if the United States would do the same for an equal number of Soviet students in the United States.

I could continue at length about the progress in education, medicine, recreation, retirement, and culture, such as ballet, opera, and music, but space and your time prevent this. By czarist standards, and this is the only yardstick that makes any sense, since it is the only one known to the Soviet people, the present regime has made fabulous progress. The fact that they have not reached our position in many material respects is really unimportant to them and much of the rest of the world. The allegiance of the people of the underdeveloped world may be expected to be reserved for those who by precept and example can show them how they can achieve a tolerable material standard of living and help them to achieve it; not for that people or nation which presently and under totally different circumstances has already reached the pinnacle of plenty. We can, in my opinion, win this allegiance, but only if we are willing to pursue a policy of international cooperation instead of Communist containment.

Cordially,

HUGH B. HESTER,
Brigadier General, United States Army (Retired).

G. H. (Wad) Williamson

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, Erath County, Tex., and the Nation have suffered a great loss in the recent death of G. H. (Wad) Williamson, of Stephenville. His life was one in keeping with the traditions and democratic faith of his pioneer family. His courage and forthright battle against the forces of corruption and villification which threaten the democratic ideals which he upheld have served and will continue to serve for years to come, as an inspiration to all who believe in the American heritage of freedom.

Wad Williamson served as my campaign manager throughout the cross timbers area of Texas during three long campaigns. His deep devotion to democratic ideals and his outstanding leadership was a responsible factor in the ultimate victory.

Mr. President, the May 17, 1957, issue of the Stephenville Empire-Tribune paid tribute to this great man.

"Mr. Williamson was known for his many deeds of kindness to those in distress. In a quiet way he extended a helping hand to scores of elderly people in Erath County. Frequently he made no charge for his legal service. However, as a prosecutor he was vigorous and unyielding to those who violated the rule of principle and the laws of the State."

In this same paper, 1 week later, the sterling character of Wad Williamson again was reflected in editorial comment:

"The night was never too dark for Wad to come to the relief of one of his friends, regardless of what the circumstances were."

Mr. President, Wad Williamson has left a heritage worthy of guarding because he was courageous and steadfast in fighting for the preservation of that heritage of freedom which was his. I shall always cherish his memory as I did his friendship.

Average Family Pays "Through the Nose" While Favored Groups Enjoy Income-Tax "Gimmicks"

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. EBERHARTER. Mr. Speaker, every wage earner knows what it is to fill out income tax forms each year, and most of our wage earners pay a heavy proportion of their earnings in these taxes. They do not object to helping to pay their share of the tremendous expenses of Government, since we all enjoy precious privileges as citizens of this great country.

But the average wage earner and taxpayer bitterly resents having to pay a disproportionately high income tax in order to make up for the legalized shenanigans practiced by those who enjoy special tax benefits not available to the average family.

And they are perfectly justified in resenting this sort of unfair treatment.

As a member of the Committee on Ways and Means of the House of Representatives, the committee which originates all tax legislation for the Congress, I have always battled for a fair break for the average taxpayer. I make no apologies for the many battles I have waged for this purpose, and I intend to keep up this fight to assure fair tax treatment for all.

Beginning early next January, our committee plans to make a comprehensive review of current tax laws and tax policies to remove those provisions which are unfairly generous to some wealthy taxpayers and to corporations while being unfairly discriminatory against the average family.

Such a study is particularly necessary now to repair the damage to the tax structure—the damage to fairness in the tax structure—caused by the passage in 1954 of a rich man's tax law which had practically nothing in it of help to the average wage earner and the average family.

EVENTS JUSTIFY MY 1954 STATEMENTS

Looking back over the debates in 1954, I find that I made quite a number of speeches on the House floor condemning some of the very provisions of the bill which are now causing Uncle Sam extensive losses in revenue and thus making the average taxpayer pay more than a fair share.

I find, too, that the Eisenhower administration and its chief congressional spokesmen denied my charges in 1954 and insisted the rich man's tax bill we were then debating would not do the very things that experience now shows it has done to the revenues of this country.

Well, Mr. Speaker, there is perhaps little to be gained in going back through the old issues of the CONGRESSIONAL RECORD to point to chapter and verse in order to prove that what I said would happen has actually occurred. Suffice it to say that the record proves it. Suffice it to say that the American public knows now that it was—yes, swindled, is the word—by that tax bill of 1954.

But while there is perhaps little to be gained in going back over the bygones of that historic debate of 1954 merely in order to prove that Mr. Eisenhower and his Secretary of the Treasury and all of his officials and advisers were responsible for pushing an extremely bad tax law through that Republican Congress of 1954, there is much to be gained in reviewing now the deficiencies of that tax law and correcting them.

That is one reason why I look forward to the investigation by our Committee on Ways and Means next January. We have a tremendous and an urgent task to perform.

DIVIDEND GIVEAWAY SHOULD BE REPEALED

In the meantime, Mr. Speaker, I have personally introduced several pieces of legislation which I hope will form a keystone of the tax-reform bill we eventually vote out of committee for consideration by the House and later by the Senate.

One of these bills of mine would repeal the special tax gimmick which gives wealthy taxpayers with large incomes from common stocks a vast handout—and it is a handout—of your money and mine by permitting them to avoid a fair tax on their incomes from stock dividends.

I do not want to dwell on the fact that the Secretary of the Treasury who was most active and vigorous in insisting that this stock dividend tax gimmick be passed in 1954 has, in his own private capacity as an investor, reaped a great bonanza from this same provision of the tax law.

Mr. Humphrey has made no secret of the fact that he had vast holdings in common stocks while serving in the Treasury, and apparently he was within his legal rights if not his moral rights in doing so. I do not want to dwell either on the fact that firms in which he was a large investor benefited tremendously from policies of this administration which he helped to put into effect.

But I do think it was improper for a man who enjoys great income from common-stock dividends to insist upon—and fight for—and push through into law—a provision of the tax code which allows him special tax treatment on stock dividends of a sort which the average taxpayer does not enjoy on his earned income.

WHY IS WAGE EARNER'S INCOME TREATED DIFFERENTLY?

Is there something particularly sacred about income derived from dividends on

common stocks that it should not be taxed to the recipient in the same way a steelworker, or a meatcutter, or a taxi driver, or a white-collar worker, or a salesman, or any other wage earner is taxed on his earnings?

This administration insisted there is such a special virtue in holding common stocks that the stockowners should not have to pay full taxes on their dividends.

My bill would repeal that discriminatory feature of the 1954 law. It would require that income from common-stock dividends be taxed in the same way a wage earner's pay check is taxed. Why not?

Another of my bills introduced in anticipation of our comprehensive review of tax legislation early next year is one which I introduced just today, which carries out a principle for which I have been fighting for the full 3 years since the law was changed in this respect.

I refer to the special depreciation allowance which the present tax law gives to businesses on new plants and equipment.

The average taxpayer does not get much advantage out of the depreciation features of the law. If he uses his car on his job, or if he rents out a house to tenants, then he is familiar with the depreciation provision of the law. This provision allows you to deduct from income each year a certain percentage of the original cost of the property used to produce income.

REGULAR DEPRECIATION FAIR TO ALL

Under the previous law, you were allowed to deduct for depreciation each year only an amount equal to 1 year's estimated proportion of the cost of the investment, based on the average useful life of that piece of property or equipment.

That still holds true on a piece of property or equipment which was built since 1954. But on any plant or other facility built new by a corporation since enactment of the 1954 law, the owners can now deduct a much higher percentage for depreciation in the early years of the life of the plant.

Under the old law, a corporation building a new plant would deduct about 5 percent a year for depreciation—based on an average estimated useful life of the plant of 20 years. The same depreciation allowance would then continue for each of the 20 years until the entire cost of the plant was written off for tax purposes.

Thus, on a $1 million plant, the corporation each year would deduct from its profits one-twentieth of the original cost of the plant and not pay taxes on this part of the profits, and at the end of the 20 years, it would have the plant paid for out of tax-free profits.

That is a good arrangement, and fair to all. It applies to used property even now—and to any plant already built which a corporation might now purchase. And it is the only way the average taxpayer with some income-producing property ever gets any help out of the depreciation allowance.

NEW GIMMICK DOUBLES RATE IN EARLY YEARS

But the new law doubles the rate of depreciation for the early years of a plant's useful life. Instead of 5 percent a year for 20 years, for instance, a new plant can be depreciated at the rate of 10 percent the first year, 9 percent the next, and so on, on a declining scale.

Over the full 20 years of the life of that plant, the depreciation allowance would work out to just about the same under both plans.

But here is what is happening and can happen: Using this special gimmick, many corporations have built new plants, using the latest automation equipment to reduce manpower needs, and have been milking these plants for quick profits under the tax laws. Then they can sell out after reaping the cream through the depreciation allowance, and move elsewhere and build a new plant.

SPUR TO RUNAWAY PLANTS

Needless to say, much of this new plant and equipment goes to the low-wage areas, often to areas where bitterly anti-union local or State laws are in effect to discourage union organization and hold down wage rates. And, needless to say, such runaway plant practices react adversely against established industrial centers such as Pittsburgh where wage rates are fair and labor is able to defend its rights.

Mr. Speaker, we have just recently enacted a law to repeal the so-called rapid amortization program which, under the guise of promoting construction of necessary defense facilities by private enterprise, has cost the Federal Government literally billions of dollars in unfair tax concessions to big business. This wartime law—enacted to serve a wartime purpose—was so badly abused by this administration in handouts to big business that it became a national disgrace. It permitted favored companies to write off plant costs in a very short period of time.

PRINCIPLE THE SAME AS RAPID AMORTIZATION PROGRAM

We have repealed the wartime law for depreciation handouts, but the same principle still exists, although to a less flagrant degree, in the regular tax laws. That, too, should be repealed. And I have introduced a bill to repeal it.

Let us see how this double-rate depreciation allowance now in effect works out for big corporations. They put aside twice as much of their profits tax free in the early years of a new plant's existence. They enjoy, at the very least, an interest-free loan of this extra money for years, if they hold the plant through the full 20 years. They enjoy a wonderful bonanza if they sell out before then after skimming the cream by huge tax-free extra profits through the depreciation gimmick.

In any event, imagine how nice it would be if you or I could, in effect, borrow huge amounts of money now without paying interest on it. When anybody on the inside in any organization is able to borrow big sums without paying interest, we are all horrified by it, particularly if it happens in a union.

INTEREST RATES EXTREMELY HIGH FOR MOST PEOPLE

But it is happening every day on a vast scale as corporations in effect borrow money from Uncle Sam—without interest—through this special depreciation allowance. Thus they borrow it from you—the taxpayer.

The average home buyer now pays nearly 6 percent interest on his mortgage. GI loans are virtually unobtainable at 4½ percent. FHA loans are up to 5¾ percent, and even then, the builder may have to pay a substantial "gray market" side payment in order to get a loan at all on a house he is trying to sell FHA.

Installment loans carry very high interest rates now. Automobile loans cost the average citizens dearly, too, in interest.

But big business gets this handout of interest-free loans from the Government merely by taking advantage of the depreciation allowance in the tax laws as passed by the Republican 83d Congress in 1954.

This must end. The law should be made fair to all.

NEW LAW SHOULD REPEAL "GIMMICKS," HELP AVERAGE FAMILY

Therefore, Mr. Speaker, I am looking forward to our hearings and investigations in January, through the Committee on Ways and Means, and I intend to do everything I can to promote the passage of better tax laws.

The average family needs tax relief. It pays through the nose. The revenues which have been lost to the Government as a result of the tax gimmicks for big business and the wealthy stockowner in the 1954 law could more than cover the cost of a substantial and significant tax reduction for everyone.

We have cut Eisenhower's budget and we have taken many other steps to economize on Government costs. The need now is to cut the loopholes out of the tax laws—remove the gravy which goes to the few—repeal the slick gimmicks—and thus put taxpayers on the same basis—put them all on a fair basis.

No true American would deny his Government the necessary funds and revenues to maintain our country's greatness and to do the things which only Government can do.

By the same token, no American should be made a fall guy, to have to pay more than his fair share of the tax burden in order to provide handouts in taxes to friends of the Eisenhower administration and to those who put up the huge campaign contributions to elect this administration.

What is fair is fair. We must make fairness the keystone of new tax legislation.

Inflation

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the threat of inflation is one of the great problems with which we are

confronted today. No one has put forth greater efforts to make our people aware of this danger than EDWARD MARTIN, the distinguished senior Senator from Pennsylvania.

Two leading columnists have paid tribute to Senator MARTIN's activities in this most important field, and I believe their articles warrant the careful attention of my colleagues. The column by Mr. Holmes Alexander appeared in the Philadelphia Evening Bulletin on August 15, 1957, while the one by Mr. Robert Taylor appeared in the Pittsburgh Press on January 20, 1957.

[From the Philadelphia Evening Bulletin of August 15, 1957]

THE PRIMROSE PATH OF INFLATION—SENATOR MARTIN PAINTS VIVID PICTURE OF AN ERA

(By Holmes Alexander)

WASHINGTON.—Senator EDWARD MARTIN, Republican, of Pennsylvania, who will be 78 on his next birthday, is not running for reelection as Senator, but he already is doing service in a still more honored post, that of elder statesman.

It is a fairly new title in America where we have no House of Lords and where a few years ago the aging, out-of-office politician was considered an object of pity, even derision. But the Honorable Herbert Hoover, who has had a whole new career since his Presidency, has almost singlehandedly elevated the elder statesman to a recognized and revered status in American public life.

During the marathon hearings of the Senate Finance Committee on fiscal monetary policies, Senator MARTIN has been a standout in a show of all-star personalities. The committee's stellar witness for nearly 3 weeks was then Secretary of the Treasury George Humphrey. The committee's chairman was the incomparable Senator HARRY BYRD, and its members included such Members of the Senate brain trust as CLINTON ANDERSON, PAUL DOUGLAS, JOHN WILLIAMS, and RALPH FLANDERS.

LIKE THE YANKEES

It was as chairman of this erudite committee that the late Walter George, Democrat, and Eugene Millikin, Republican, became famous. As with the New York Yankees, it is hard enough just to make the team. To be a standout is a very great feat indeed.

Senator MARTIN has accomplished this, as I have followed the hearings, by treating the subject under discussion—inflation—with deep seriousness. Other committee members have tried to attract attention to themselves either by badgering the witnesses or by making anti-inflation orations. There has been a tendency to try to name a villain, some of the nominees being labor, big business, high interest rates, low tariff rates, and, of course, communism.

Senator MARTIN has avoided all these temptations to put the limelight on himself or the dunce cap on somebody else. He has treated the witnesses as experts in their field and has attempted to draw from them some constructive answers.

SENATOR'S SKETCH

The other day, in the course of questioning Under Secretary of the Treasury W. Randolph Burgess, Senator MARTIN unconsciously did what is often done by the police, when, attempting to establish the identity of an unknown culprit. He did a sketch which emphasized the known and salient features of the missing villain, as follows:

Greedy mouth: "We have wanted to enjoy," said Senator MARTIN, "more than we have produced." Considering the massive productive capacity of this Nation, the desire for still more almost amounts to gluttony on the part of our consuming public. The use, actually the overuse, of our private, corporate, and Government credit systems has created an economy of superabundance based on a towering structure of unsteady debt.

Grasping fingers: "This effort, said Senator MARTIN, "has (resulted in) increases in profits and wages greater than increases in productivity." The laudable desire for making money and drawing good wages has become something of an obsession with us. The American instinct for acquisition has outrun even the American genius for man-hour and machine-hour production.

"PRIMROSE PATH"

Myopic vision: "Many people in this country do not sincerely object to mild inflation. In moderate doses, it gives the impression of well-being to many of our people. Yet * * * the apparent primrose path of inflation can lead only to disaster." Apparently, the business executive, the labor leader, and the statesman just don't have the eyesight to see the end of the primrose path.

This composite picture of the drooling, clutching, squinting fiend called inflation is in each part, of course, of some features of ourselves. But the Senator's picture, I think, is not intended as a caricature, much less a slander, on the American people.

Senator MARTIN points out that the American system, itself, is sound.

Despite the criticism about the high cost of money, our interest rates are lower than in most other countries. Despite all the talk about the devaluation of our dollar, the American purchasing power, 1947–57, stands third to Switzerland and India in stability. Our money is off 20 percent, but money in strictly controlled Red China is off 94 percent, and even in Canada it is off 29 percent.

"KNOW THYSELF"

Senator MARTIN is not trying to shame us or blame us, as much as he is trying to make us face our own faults in the honest mirror of truth. He is passing on the wisest advice which age can give to youth in any generation: "Know thyself."

The cause and the cure for inflation lie within us.

[From the Pittsburgh Press of January 20, 1957]

IKE SETS RECORD BUDGET

(By Robert Taylor)

President Eisenhower's new budget is going to be a bitter pill for leaders of the Republican delegation from Pennsylvania in Congress.

They've been crusading for years against big government, big spending, handout government, high taxes, and giveaways. Now the President of their own party presents the biggest peacetime budget in history—$71,800,000,000 worth.

With the Democrats in control of both Houses of Congress, Ike is going to need the support of the Pennsylvania Republicans, who are a large and influential group in Congress. But for some of them, it's going to take some delicate balancing to support the President.

United States Senator EDWARD MARTIN, for instance. He's the ranking Republican member of the Senate Public Works Committee, and thus a big wheel in passing on much of the spending program.

ED MARTIN'S whole political career has been one of unending battle against big government, big spending, and big taxes. He hasn't taken a pinch-penny attitude toward public works, but he has advocated a sort of old-fashioned policy of frugality.

PAID DEBTS

When he was Governor of Pennsylvania, during the latter part of World War II, the tax revenues came rolling in at a time when the State couldn't spend it all, on account of wartime scarcities. He reduced taxes and used the surplus to wipe out some debts.

Back in 1953, in Ike's first year as President, Senator MARTIN was saying that the "increase of big government in the past two decades is most alarming." He said then that he feared "the results of Government financial collapse from within more than invasion of an enemy army from without."

Senator MARTIN was an advocate of the big highway building program which finally was enacted last year, because he recognized that we had fallen behind in our roadbuilding. But he was an early advocate of the pay-as-we-go principle, which finally was adopted.

DEFENSE SPENDING

Representative HUGH D. SCOTT, JR., of Philadelphia, was Republican national chairman in 1948 and 1949, and he, too, was a critic of the Roosevelt and Truman budgets. Representative SAMUEL K. MCCONNELL, of Montgomery County, top Republican on the House Education and Labor Committee, is another critic of big government.

One saving feature of the new Eisenhower budget is that it doesn't call for any deficit spending. It should produce, if the estimates hold up, a surplus of $1,800,000,000. Deficit spending has been one of the favorite targets of Republican campaigners for lo, these many years.

Another angle which will ease whatever pain the Republicans in Congress may feel is that most of the increase in the new budget over the present budget is accounted for by defense spending.

The uncertainties of international affairs, the rapid development of new weapons and the necessity for constant research and improvement of defense forces are pointed to as reasons for the increase.

Supplemental Report on Chicago Water Diversion of Committee on International and Foreign Law of Chicago Bar Association

---

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the supplemental legal opinion and report, dated August 1, 1957, issued by the Chicago Bar Association concerning the Lake Michigan water diversion legislation, H. R. 2.

This opinion and report supplements the able report on the same subject approved by the bar association last year. It clearly refutes a number of the legal contentions of the governmental officials of Ontario, which were placed in the CONGRESSIONAL RECORD on August 26 by the Senator from Wisconsin [Mr. WILEY] and proves that both under the 1909 Boundary Waters Treaty and under general international law the proposed diversion of water is proper and legal.

In the report of the Army engineers, which is appended to and made a part of the bar association's report, the engineering and technical data are set forth which demonstrate the minimal and highly speculative character of the losses which some have claimed would result from the proposed diversion.

I hope Members concerned with this issue will study this able supplemental legal opinion and report with care.

There being no objection, the legal opinion and report were ordered to be printed in the RECORD, as follows:

SUPPLEMENTAL LEGAL OPINION AND REPORT ON CHICAGO WATER DIVERSION OF COMMITTEE ON INTERNATIONAL AND FOREIGN LAW OF CHICAGO BAR ASSOCIATION ON H. R. 2 (85TH CONG.) AS TO 1,000 CUBIC FEET PER SECOND INCREASE IN DIVERSION OF WATER FROM LAKE MICHIGAN AT CHICAGO, FOR A 3-YEAR PERIOD, TO PERMIT STUDY BY SECRETARY OF ARMY AS TO ITS EFFECT ON LAKE MICHIGAN AND ON ILLINOIS WATERWAY, AUGUST 1, 1957

I. INTRODUCTION

On March 1, 1956, the Chicago Bar Association approved the report of its committee on international and foreign law regarding the legal aspects of proposed legislation (H. R. 3210, 84th Cong.) contemplating an increase from 1,500 cubic feet per second to 2,500 cubic feet per second in the amount of water diverted from Lake Michigan into the Illinois waterways. This bill was passed by Congress but was subsequently vetoed by the President. H. R. 2 (85th Cong.), a bill substantially identical to H. R. 3210, has been passed by the House and is now pending in the Senate.

The 1956 bar association report made the following conclusions on lake diversion at Chicago:

I. Congress has power under the commerce clause of the Constitution to authorize the additional diversion.

II. Authorization of additional diversion would not violate the constitutional barrier to giving a preference to the ports of any State.

III. The power of Congress to authorize increased diversion is not affected by the fact that the Supreme Court has in the past considered the subject matter and has retained jurisdiction to modify its decree.

IV. Congressional action authorizing additional diversion at Chicago would not violate the mandatory provisions of the International Boundary Waters Treaty of 1909 or the Niagara Treaty of 1950. Whether Congress should await the report of the International Joint Commission pursuant to the 1952 reference under article IX (1909 treaty) is a question of policy to be decided by Congress. There are no rules of international law or principles of comity which introduce considerations different from those considered in connection with the 1909 treaty.

The 1956 report, widely circulated, has served to stimulate discussions of the legal problems of diversion. This supplemental report explores further the law relating to Chicago diversion previously mentioned in IV–C of the original report. This report also takes cognizance of certain articles in the public press which have suggested that the United States would be in an inconsistent position if it were to permit diversion at Chicago and at the same time oppose Canada's proposed diversion of water from the Columbia River.

The conclusions reached in this supplemental report of the committee, discussed below, are the following:

A. The 1909 Boundary Waters Treaty as applied to the proposed diversion may make rules of general international law inapplicable and the treaty itself may authorize that diversion.

B. If international law, independent of the 1909 treaty, prevails, still the proposed diversion is proper.

C. The authorization of additional diversion at Chicago should have no legal effect upon the right of the United States to object to the proposed diversion by Canada from the Columbia River.

II. NEITHER THE 1909 TREATY NOR INTERNATIONAL LAW PREVENT THE PROPOSED DIVERSION

A. The 1909 boundary waters treaty as applied to the proposed diversion may make rules of general international law inapplicable and the treaty itself may authorize that diversion

A well-established rule of international law is that if states involved in a controversy have concluded an agreement governing an issue in dispute, this agreement, rather than the general international law, determines the rights and duties of the states until it is abrogated. This rule concerning the effect of agreements and treaties has been applied to water diversion cases. Diversion of Water from the River Meuse (Publications of the Permanent Court of International Justice, Ser. A/B, No. 70, 1937).

While the rule stated as to the effect of treaties is undoubtedly correct, there is a question whether the International Boundary Waters Treaty of 1909 includes a determination of the rights of the two countries over diversion of water from Lake Michigan. The preliminary article defines the term "boundary waters" in a manner that obviously includes Lakes Superior, Huron, Ontario, and Erie, which flow along the common border, and which clearly excludes Lake Michigan, lying wholly within the territorial limits of the United States. The purpose of the treaty is recited to be "to prevent disputes regarding the use of boundary waters" and to settle all pending questions involving rights, obligations, and interests "'along their common frontier." Lake Michigan in some respects thus appears to be outside the general scope of the treaty. It is outside the scope of article III, which subjects diversion questions on boundary waters to the jurisdiction of the International Joint Commission (see this committee's 1956 report, pp. 21–25).

Article II, on the other hand, may specifically define the rights of the United States over Lake Michigan. Article II provides:

"Each of the high contracting parties reserves to itself or to the several State governments on the one side and the Dominion or Provincial Governments on the other as the case may be, subject to any treaty provisions now existing with respect thereto, the exclusive jurisdiction and control over the use and diversion, whether temporary or permanent, of all waters on its own side of the line which in their natural channels would flow across the boundary or into boundary waters; but it is agreed that any interference with or diversion from their natural channel of such waters on either side of the boundary, resulting in any injury on the other side of the boundary, shall give rise to the same rights and entitle the injured parties to the same legal remedies as if such injury took place in the country where such diversion or interference occurs; but this provision shall not apply to cases already existing or to cases expressly covered by special agreement between the parties hereto.

"It is understood, however, that neither of the high contracting parties intends by the foregoing provision to surrender any right, which it may have, to object to any interference with or diversions of waters on the other side of the boundary the effect of which would be productive of material injury to the navigation interests on its own side of the boundary."

The language of the first portion of the first paragraph of article II, taken alone, apparently vests in the United States the exclusive jurisdiction and control over the use and diversion of water from Lake Michigan. The second portion of the first paragraph may preserve certain rights of injured parties to object to certain diversions, but exception is made for "cases already existing." Since more water was being diverted at Chicago when the treaty became effective in 1909 than the 2,500 cubic feet per second now sought to be diverted under H. R. 2, Chicago diversion is clearly a case already existing within the meaning of the exception. Thus the first paragraph of article II, taken as a whole, appears to grant exclusive jurisdiction over the matter to the United States.

The second paragraph of article II preserves the right, if any, of Canada to object to diversions from Lake Michigan which are productive of material injury to its navigation interests. On the findings of either International Lake Ontario Board of Engineers or the United States Army Engineers (see exhibit A), the proposed Chicago diversion would not result in material injury to Canadian navigational interests.

Considering article II as a whole, it can therefore be strongly argued that its overall effect is to vest exclusive jurisdiction and control over the proposed Chicago diversion in the United States, regardless of whether Canada would have had a right to object under international law independent of the treaty. As a corollory, by entering into the 1909 treaty, Canada has waived any rights under international law to object to any diversions from Lake Michigan except those which would be productive of material injury to navigation.

There is contrary opinion, to the effect that international law governs regardless of the article II provisions. As an example:

"So far as the Chicago diversion is concerned, the effect of the (1909) Treaty is clearly to preserve the existing rights of the parties under the general rules of international law." H. A. Smith, the Chicago Diversion (10 British Yearbook of International Law 144 at 148 (1929)).

See the extract from Anderson, Records 1909–11, quoted as note 82 in the article of James Simsarian entitled "The Diversion of Waters Affecting the United States and Canada," 32 American Journal International Law 488 at 506 (1938). There Chandler P. Anderson, the American delegate in the treaty negotiation, writing Robert Lansing, Secretary of State, stated that Anderson's correspondence with his Canadian counterpart and article II as agreed to by the two delegates imposed no restriction with reference to diversion of water from Lake Michigan for the Chicago drainage canal, nor did Great Britain surrender any right which it may have had to object to any interference with or diversion of such water in case the effect would be productive of material injury to the navigation interests on the Canadian side of the boundary.

This committee is not able, on the basis of its present study, to render a definite opinion that article II determines the rights of the two countries in this problem, affirmatively granting power to the United States. It may be that article II leaves the rules of international law in force. Our conclusions as to the effect of international law, however, assuming its applicability, make unnecessary and final decision on that point. The committee also recognizes that even if article II does grant exclusive power over the question to our Government, the United States, in exercising that power, might not desire to act contrary to any accepted principles of conduct among nations, if such principles would dictate a different result. We therefore proceed to discuss the principles of international law which bear upon water diversion questions and to ask whether the proposed Chicago diversion is not proper under prevailing rules of international law.

B. International law, independent of the 1909 treaty, prevails, still the proposed diversion is proper

It is the conclusion of the committee that, even if article II of the 1909 treaty does not

give the United States exclusive jurisdiction over Lake Michigan diversion, the proposed diversion conforms to accepted principles of international law. There have been two views on the principles of international law involved. One, the older view, is that of absolute territorial sovereignty. Its proponents state that when a waterway crosses two or more countries in succession, each of the countries traversed possesses complete ownership and jurisdiction of that section flowing through its territory. The other and newer view, which is strongly favored by most international legal scholars, is the rule of equitable apportionment. This doctrine requires that where several nations have an interest in a common waterway, each nation should get an equitable share of the common water.

The old territorial sovereignty view was at one time adhered to by the United States. See the opinion of United States Attorney General Harmon (21 Ops. Att'y. Gen. 267 (1895)). The United States subsequently repudiated the Harmon view and in 1944 the United States entered into a treaty with Mexico relating to the use of certain rivers. It was ratified by the Senate. This treaty involves a recognition of equitable apportionment of waters as a governing principle. In recommending ratification of the treaty of 1944 the Secretary of State said that it "must be realized that each country owes to the other some obligation with respect to the waters of these international streams." See generally the reported hearings before the Senate Committee on Foreign Relations on Treaty with Mexico Relating to the Utilization of the Waters of Certain Rivers, 79th Congress, 1st session, part 1, 19 (1945). This newer position taken by the United States brought it in line with the decisions of the United States Supreme Court in determining water apportionment problems among the States, *Wyoming* v. *Colorado* (286 U. S. 494 (1931)); *Kansas* v. *Colorado* (206 U. S. 46 (1906)). The United States view likewise came into conformity with preponderant opinions elsewhere in the world. England and Canada have long adhered to the doctrine of equitable apportionment.

Under either view the proposed Chicago diversion is permitted. Absolute territorial sovereignty would allow the diversion of 1,000 cubic feet per second or any other amount.

Under the new accepted rule of equitable apportionment the proposed diversion would likewise be proper. This is evident when consideration is given to the factors involved in making an equitable apportionment. These factors, as outlined in the report of the International Law Association on the Dubrovnik conference in 1956 (article V) are:

(a) The right of each State to a reasonable use of the water.

(b) The extent of the dependence of each State upon the waters of that river.

(c) The comparative social and economic gains accruing to each and to the entire river community.

(d) Preexistent agreements among the States concerned.

(e) Preexistent appropriation of water by one State.

The three primary factors set out above which indicated that Chicago diversion is proper under the rule of equitable apportionment are: (a) social needs of the entire river community, primarily sanitation, (b) preexistent appropriation of water by Chicago diversion, and (c) reasonable use of water, i. e., damage resulting in de minimis.

(1) The Social Needs—Sanitary Purposes

The paramount interest of society in health and sanitation urges strongly that diversion which benefits health of a nation should be permitted.

A primary purpose of the Chicago diversion is cleansing of the Illinois waterway and the sanitary removal of waste from the Chicago metropolitan area. Chicago's sewage now receives, and has since the 1940's received maximum treatment (see committee's report), but some effluent remains after treatment. The additional diversion should assist materially in the removal of this effluent. Such assistance is of great importance to the health of the residents along the Illinois waterway and to the crews employed on craft passing through it.

It is significant to note that article VIII of the 1909 treaty which grants jurisdiction over boundary waters to the International Joint Commission specifically gives preference to diversions for domestic and sanitary purposes over considerations of navigation and power. The treaty is expressive of an international policy which should be accorded some weight in arriving at an equitable water distribution as between the competing factors of Chicago's needs and St. Lawrence power potential and the minimal effect upon navigation.

(2) Preexistent Appropriation at Chicago

The proposed legislation seeks a diversion of an additional 1,000 cubic feet per second, or a total of 2,500 cubic feet per second, substantially under the 8,500 cubic feet per second to 10,000 cubic feet per second which were previously diverted. The diversion of waters from Lake Michigan commenced in 1899 and has continued to the present date in amounts varying from a maximum of 10,000 cubic feet per second to the present diversion of 1,500 cubic feet per second. Canada had no part in the procedure by which this diversion was decreased. The decrease was ordered by the United States Supreme Court upon objections by four States, on the ground that the diversion authorized by the Secretary of War exceeded his powers. Since the time in 1938 when reduction to 1,500 cubic feet per second was achieved, the Court has kept jurisdiction over the case and as recently as 1957 has allowed a temporary increase upon cause shown.

(3) Reasonable Usage—i. e., No Substantial Injury

International law uses the doctrine of substantial injury as the common law uses the doctrine of de minimus non curat lex.

The proposed diversion appears to be nominal. This Committee has not undertaken to discuss the merits of the proposed diversion or to evaluate technical data submitted by various interested parties. However, the attention of the Committee has been called to a comprehensive report by the division engineer, North Central Division, Corps of Engineers, United States Army, addressed to the Secretary of the Army, dated January 29, 1957. This report was prepared in response to the suggestion contained in the President's veto message dated August 9, 1956, of H. R. 3210. The report reflects a study covering the effect of both a temporary 3-year diversion and a permanent diversion of an additional 1,000 cubic feet per second. A copy of the letter transmitting the report to the Secretary of the Army which summarizes the results found in the study is attached as exhibit A to this supplemental report.

This engineering report evaluates the quantum of effect of the proposed diversion on hydroelectric power, Great Lakes shipping and onshore properties. It finds that most of the results are too slight to be measured and those which are measurable seem indeed to be very nominal. Since, under the doctrine of equitable apportionment, Canada could object only to damage which is material, it would appear that the maxim of de minimus is properly applicable.

C. The authorization of additional diversion at Chicago should have no legal effect upon the right of the United States to object to the proposed diversion by Canada from the Columbia River

It has been intimated (see, for example, the Financial Post, Toronto, February 9, 1957) that the allowance of additional diversion at Chicago might prejudice the United States in its dispute with Canada over the proposal of the latter to divert 15 million acre-feet annually from the Columbia River Basin. The argument, briefly put, is that vital power interests of the United States in the Columbia Basin will be jeopardized for, if the United States as upper riparian sovereign diverts water at Chicago, and at the same time argues that Canada as upper riparian sovereign cannot divert in the Kootenai-Columbia system.

In the opinion of the committee, the factual situations in the two areas are not analogous. The amount of diversion at Chicago is insignificant when compared to the amounts mentioned in the Kootenai-Columbia area. The relative power loss at Niagara is slight by comparison. Under the rule of equitable apportionment, now supported by most writers, by our Government since 1944 and by the Canadian Government for many years previously, the diversion at Chicago would be proper. Measured by the same standards, the propriety of the proposed Columbia River diversion is questionable. The enormity of the power uses at the Grand Coulee Dam and elsewhere on the American side demonstrate that damage resulting from so large a diversion would necessarily be, at the very least, substantial. Hence, the de minimus principle is not involved.

Further, article II of the 1909 treaty offers no protection to Canada against complaints by citizens who might be injured by a Columbia River diversion. With respect to Chicago diversion, however, any legal remedy is precluded for cases already existing.

Respectfully submitted.

COMMITTEE ON INTERNATIONAL AND FOREIGN LAW.

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, D. C., January 29, 1957.

Subject: Effect on Great Lakes and St. Lawrence River of an increase of 1,000 cubic feet per second in the diversion at Chicago.

To: The Secretary of the Army.

1. I submit herewith a special report on the effects of increased diversions from Lake Michigan at Chicago prepared at the request of the Director of the Bureau of the Budget to meet a need for information on this subject as pointed out in the President's memorandum of disapproval of H. R. 3210, 84th Congress, a bill to authorize a 3-year test increase of 1,000 cubic feet per second in the diversion from Lake Michigan at Chicago.

2. The basic report of the division engineer, north central division, of the Corps of Engineers, submitted herewith, was prepared from data available in part through studies being made for a report on Great Lakes water levels in response to a resolution of the Committee on Public Works of the House of Representatives, adopted June 26, 1952 and in part from information available to the Corps of Engineers through its participation in preparation of a report of the International Lake Ontario Board of Engineers to the International Joint Commission dated June 14, 1955.

3. In general, an increase in the diversion from Lake Michigan at Chicago would affect the levels and outflows of Lakes Michigan, Huron, Erie, and Ontario and the St. Lawrence River, all of which are downstream, and would not affect the levels or outflows of Lake Superior, which is upstream from the diversion. A temporary increase in the diversion of 1,000 cubic feet per second for 3 years would have temporary effects that would reach a maximum in about 3 to 3½ years and then gradually diminish and disappear about 15 years after the temporary diversion was discontinued. The effects of

a permanent diversion would increase progressively to a maximum in about 15 years and would then continue permanently at that amount.

4. The computed effects of temporary and permanent diversions in terms of lowering of mean stages and reduction in average outflows are as follows:

Maximum temporary effects of a 3-year diversion of 1,000 cubic feet per second [1]

	Lakes Michigan and Huron	Lake Erie	Lake Ontario
Time required to reach maximum effect	36 months	39 months	42 months.
Lowering effect on lake levels [1]	0.05 foot (or 5/8 inch)	0.03 foot (or 3/8 inch)	0.03 foot (or 3/8 inch).
Reduction in outflow [1]	625 cubic feet per second.	585 cubic feet per second.	570 cubic feet per second.

[1] These maximum temporary effects would diminish gradually and would disappear approximately 15 years after the temporary diversion was discontinued.

Ultimate effects of a permanent diversion of 1,000 cubic feet per second [1]

	Lakes Michigan and Huron	Lake Erie	Lake Ontario
Lowering effect on lake levels [1]	0.08 foot (or 1 inch)	0.05 foot (or 5/8 inch)	0.05 feet (or 5/8 inch).
Reduction in outflow [1]	1,000 cubic feet per second.	1,000 cubic feet per second.	1,000 cubic feet per second.

[1] Reached progressively in 15 years and continuing thereafter.

5. The foregoing reductions in outflows that would result from increasing the diversion at Chicago could not be compensated for except by increases in diversions into the Great Lakes system. The lowering of lake levels, however, could be compensated for in various ways. For Lakes Michigan and Huron the lowering could be offset by construction of a deeply submerged sill in the St. Clair River at an estimated cost of $1,530,000. The lowering effect in Lake Erie could be compensated for by operating the control gates of the Niagara River remedial works now nearing completion in such a way as to hold the level of the pool immediately above the works at a stage 0.22 of a foot higher than presently specified. For Lake Ontario the approved plans for regulation that will be put into effect when the St. Lawrence power structures are completed can be readily adjusted within the prescribed 4-foot range of stage so that there would be no significant change in levels as a result of the increased diversions. All of the foregoing measures would require coordination with Canada.

6. The estimated reduction in generation of hydroelectric energy that would result from a 3-year increase in the diversion at Chicago would fall between a minimum of 188 million kilowatt-hours and a maximum of 443 million kilowatt-hours, depending on when the diversions were started and when proposed additional hydroelectric plants are put into operation. This amount of reduction is a small fraction of 1 percent of the total energy production at the plants affected. Excluding the possible reduction at existing and proposed plants on the St. Lawrence in Quebec for which data for evaluation are not available, the estimated value of the maximum possible reduction at plants in New York and Ontario, representing 72 percent of the total involved, would be $918,000 over the entire period that the increased 3-year diversion would have any effect. The total value of the minimum reduction if scheduled new capacity is not added during this period would be $408,000. During this period the increased flow in the Illinois Waterway would permit an increase in generation at the existing Lockport plant of 70,400,000 kilowatt-hours, an offset of about 16 percent of the estimated maximum reduction in generation on the Niagara and St. Lawrence. This increase would have a total value of about $202,000. The temporary diversions would affect the dependable capacity of the hydroelectric plants, causing theoretical reductions of 2,750 kilowatts at plants in New York, 2,600 kilowatts in Ontario, and 5,000 kilowatts in Quebec; and a theoretical increase of 2,700 kilowatts at Lockport on the Illinois Waterway; but these changes are small in relation to the capacity of the power systems involved and would be of such temporary character that assignment of any value to them is not warranted.

7. The estimated effects on hydroelectric power generation that would result from a permanent increase of 1,000 cubic feet per second in the diversion at Chicago would be continuing effects and have been computed on an annual basis rather than on a total basis as in the case of the temporary 3-year diversion which would have effect for only a limited time. Assuming that proposed additional installations of generating capacity are made as scheduled the permanent diversion would result in a reduction in generation of 123,400,000 kilowatt-hours annually at plants in New York, 123,400,000 kilowatt-hours in Ontario, and 56,300,000 in Quebec. The monetary value of the New York and Ontario reductions, representing 81 percent of the total, would be $708,000 annually. The increase in possible generation at Lockport on the Illinois Waterway would be about 8 percent as much as the foregoing reductions or 23,500,000 kilowatt-hours annually, valued at $67,000 annually. The changes in dependable capacity would be a theoretical reduction of 36,800 kilowatts on the Niagara and St. Lawrence and a theoretical increase of 2,700 kilowatts at Lockport on the Illinois Waterway. These changes in theoretical dependable capacity are small with respect to the total capabilities of the generation systems involved and assignment of value to the changes is not warranted from a practical operational standpoint.

8. The lowering of lake levels of from three-eighths to five-eighths of an inch and from five-eighths to 1 inch that would result, respectively, from the 3-year and permanent diversions would tend to be beneficial in lessening possible damage to shore property during storms and high lake stages but the lowering effect is too small to permit monetary evaluation.

9. The temporary lowering effects of the 3-year diversion, ranging from three-eighths to five-eighths of an inch, would tend to adversely affect navigation during low lake stages but the effect is so small and of such temporary nature that it is impracticable to evaluate the effect in monetary terms. The ultimate and continuing lowering effect of five-eighths to 1 inch of a permanent diversion, however, would be likely to affect the loading plans of the vessels expected to comprice the Great Lakes fleet in the United States as of 1985 such that an estimated average annual economic loss of $240,000 would result. No monetary evaluation has been made of the possible adverse effect on the Canadian fleet which currently has 22 percent as much carrying capacity that would be affected as compared with the present United States fleet. The foregoing appraisal applies to traffic on Lakes Michigan, Huron, and Erie. Neither the temporary nor permanent diversion would have measurable effect on navigation on Lake Ontario or the St. Lawrence River.

10. The increased diversions would not affect navigation on the Illinois Waterway in any way that warrants monetary evaluation. Estimated beneficial effects of 2 inches and 1.5 inches, respectively, in stages at Alton Lock on the Mississippi and in the reach from St. Louis to Cairo have not been assigned a value because of other measures which have been planned and which are expected to correct the conditions which would be alleviated in part by increased diversions from Lake Michigan.

11. In summary, the desirability of a temporary diversion for 3 years to determine if sanitary conditions could be improved thereby should be considered in the light of: (1) an adverse effect on hydroelectric energy generation evaluated, in part, at from $408,000 to $918,000 depending on timing and amount of future additions to generating capacity, (2) an offsetting increase in generation valued at $202,000, (3) changes in theoretical dependable capacity which are not considered practicable of monetary evaluation, (4) effects on shore property tending to be beneficial but not measurable, (5) temporary effects on Great Lakes navigation tending to be adverse but not measurable and (6) effects on Mississippi River navigation tending to be beneficial but not of measurable monetary value on a temporary basis. Similar considerations, in amounts that would be somewhat greater and more susceptible of measurement and evaluation, would be involved if consideration is to be given in the future to the cost and justification of a permanent increase in diversion.

12. I recommend that this report on the effect of increased diversion from Lake Michigan be made available for the consideration of all concerned with such possibilities. This would include officials of the States and local organizations bordering the Great Lakes, Members of Congress and the congressional committees concerned, and interested Federal agencies, particularly the Department of State, in order that discussions can be held with Canadian interests.

E. C. ITSCHNER,
Major General, United States Army,
Chief of Engineers.

Producers in Each State Receiving the Five Largest Cotton, Wheat, Rice, and Corn Loans for the 1955 Crop

---

EXTENSION OF REMARKS
OF
HON. CHARLES B. BROWNSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. BROWNSON. Mr. Speaker, during the debate on the Agricultural Act of 1954 which provided for continued price supports for agricultural products, I included with my speech in the RECORD, July 1, 1954, pages 9556–9557, a list prepared for me by the Department of Agriculture listing individual farms and

corporations in each State receiving the largest corn, wheat, and cotton crop loans for 1953.

On August 2, 1955, I included in my remarks in the RECORD, page A6236 a similar list of recipients of the 1954 loans. Similarly, the breakdown of the 1955 crop loans appeared under my remarks in the RECORD on July 27, 1956 on pages A6638 through A6642.

Under unanimous consent, Mr. Speaker, I insert into the RECORD at this point a breakdown I have just received from the Department of Agricultural listing producers in each State with the five largest cotton, wheat, rice and corn loans for the 1956 crop. The breakdown follows:

UNITED STATES DEPARTMENT OF AGRICULTURE COMMODITY CREDIT CORPORATION

Producers with largest quantity of corn under loan, 1956 crop

Name of producer and address	Quantity	Amount
ALABAMA		
	Bushels	
Wilson Mann, Owens Cross Roads, Ala	12,050	$18,970.00
Guy L. Gannaway, Lincoln, Ala	9,950	13,532.00
C. B. Williams, Opp, Ala	8,573	11,659.28
Wade Hatcher, Hartford, Ala	7,901	9,841.99
W. B. Shaw, Tanner, Ala	6,082	8,271.52
Estimated State average per corn loan		970.54
ARIZONA		
J. L. Kidd, Jr., Willcox, Ariz	20,904	29,683.68

Lake Michigan Water Diversion Bill

EXTENSION OF REMARKS
OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Mayor Richard J. Daley, of Chicago, a letter and brief from Hon. Casimir Griglik, trustee of the metropolitan sanitary district, and a letter from the Association of Commerce and Industry of Chicago, all setting forth strong reasons for the enactment of H. R. 2, the Lake Michigan water diversion bill, which has passed the House and is now pending in the Senate Public Works Committee.

I might normally have withheld these materials until the hearings on H. R. 2 which the chairman of the committee, Senator CHAVEZ, has announced will be held early next year. But the able senior Senator from Wisconsin [Mr. WILEY] placed in the RECORD on August 26, at pages 14482–14485, a number of items in opposition to the bill, including a brief of the government of Ontario and another by the Ontario Power Commission.

For the information of Members of the Senate and others who want to consider both sides of the issue, therefore, I believe the printing of the materials mentioned would be appropriate at this time.

As these submissions clearly prove, the small proposed added diversion of water from Lake Michigan which the bill would authorize on a 3-year experimental basis only, will have minimal effects on shipping and power interests of Canada and the Great Lakes cities of the United States. But it will serve important health needs of the city of Chicago, which has shown its good faith in seeking to meet its own problems by spending over $300 million on sewage disposal plants. And the added diversion will also benefit shipping, fishing, and recreational interests in the Illinois River system.

The requested engineering studies for lack of which the President has vetoed previous diversion legislation, are now completed, and the materials I am now inserting review the relevant findings of these studies.

Also included is a recent editorial from the Cleveland Plain Dealer favoring the bill and suggesting that the interests of Illinois residents in the diversion deserve friendly consideration in the light of the estimate that no substantial damage will be done to other States' and cities' interests.

I am glad to make this data available for the study of all who are concerned with this legislation.

There being no objection, the items mentioned above were ordered to be printed in the Appendix of the RECORD, as follows:

OFFICE OF THE MAYOR,
CITY OF CHICAGO,
August 29, 1957.

The Honorable PAUL DOUGLAS,
The United States Senate,
Washington, D. C.

DEAR SENATOR DOUGLAS: The city of Chicago is joining with the sanitary district and the State of Illinois on behalf of bill H. R. 2 because it directly affects the health of the citizens of our city and county.

The sanitary district system is acknowledged to be 1 of the 7 modern engineering wonders of the Nation. This engineering achievement was accomplished through the efforts of all the people of the county of Cook. Eighty million dollars alone were spent in 1900—an overwhelming sum in that year—to reverse the flow of the river. Since then, more than $320 million have been spent to furnish the most vital service that any government can provide for its people—the protection of their health.

At the present time, the sewage treatment of this entire metropolitan area is the most efficient in the Nation. Despite this wonderful accomplishment, the additional flow of water is essential if the health of the community is to be protected.

It is obvious that the experience of the past 50 years has proven conclusively that an additional flow of 1,000 cubic feet per second would cause no adverse effect to any other governing body or private interests.

Health has no boundary lines. The people of Chicago, of Cook County—yes, indeed, of the Mississippi Valley, literally millions of people—are looking to the Congress of the United States to help them protect the health of their communities.

The people of Chicago, the people of Illinois, and the great Midwest have faith that the Congress of the United States will not permit any foreign government to determine the health standards of the citizens of our country. There can be no economic interests which could have greater weight than the continuing health of our population.

As chief executive of a great metropolitan city, I urge the passage of this bill which has as a single purpose to rid our rivers of pollution and thus protect the health of the millions of people in this great area.

Sincerely,

RICHARD J. DALEY,
Mayor.

THE METROPOLITAN SANITARY
DISTRICT OF
GREATER CHICAGO,
Chicago, Ill., August 29, 1957.

Senator PAUL H. DOUGLAS,
Senate Office Building,
Washington, D. C.

DEAR SENATOR DOUGLAS: The following facts are submitted for insertion in the CONGRESSIONAL RECORD on behalf of the adoption of H. R. 2, and are in reply to the speech in the United States Senate, August 26, 1957, by Senator WILEY, of Wisconsin, and the documents then submitted bp him for the record in connection with H. R. 2, the Lake Michigan water diversion bill (CONGRESSIONAL RECORD—Senate, August 26, 1957, pp. 14482 to 14485). These documents were:

(a) Resolution by city officials of Milwaukee.

(b) Editorial from the Milwaukee Journal, April 8, 1957.

(c) Brief by the Government of the Province of Ontario, May 6, 1957.

(d) Brief by the Hydro-Electric Power Commission of Ontario.

Senator WILEY in his presentation referred to the diversion of water from the Lake Michigan watershed, at Chicago, as the "Chicago water steal," regardless of the fact that when this diversion began, in 1848, or 109 years ago, it was not made for any local purpose of the city of Chicago, but primarily for the navigation needs of the Illinois and Michigan Canal. This canal was constructed by the State of Illinois, under an act of Congress, in 1827, which granted the State 284,000 acres of the public land to finance its building. Diversion through this canal continued, from 1848 to 1907.

Later the Chicago Drainage Canal was constructed with a capacity flow of 10,000 cubic feet per second, 1892–1900, and the Secretary of War, May 8, 1899, granted The Sanitary District of Chicago a permit "to open the channel constructed and cause the waters of Chicago River to flow into the same."

Thereafter the Secretaries of War issued subsequent permits to The Sanitary District of Chicago, as follows:

December 5, 1901, limiting the flow to 4,167 cubic feet per second.

March 3, 1925, limiting the flow to 8,500 cubic feet per second annual average, in addition to domestic pumpage, until December 31, 1929.

December 31, 1929, limiting the flow to 8,500 cubic feet per second annual average, including domestic pumpage.

June 26, 1930, limiting the flow, after July 1, 1930, to 6,500 cubic feet per second annual average, in addition to domestic pumpage, until December 31, 1935; then to 5,000 cubic feet per second annual average, in addition to domestic pumpage, until December 31, 1938; thereafter and at present to 1,500 cubic feet per second in addition to domestic pumpage.

The last permit was in accord with the decree of the United States Supreme Court, April 21, 1930, in the Great Lakes case of *Wisconsin et al.* v. *The Sanitary District of Chicago and the State of Illinois* (278 U. S. 367 at 417, 73 L. ed., 426 at 434, and 281 U. S. 179 at 199, 74 L. ed. 799 at 805).

This decree was in accord with the finding of Special Master Charles Evans Hughes, who heard the evidence and concluded that a diversion of 1,500 cubic feet per second of water was "necessary for the purpose of maintaining navigation in the Chicago River, as a part of the Port of Chicago."

The right of the city of Chicago, or any municipality for that matter, to take whatever water it needs for domestic purposes and thereafter to dispose of such water (then sewage) as it deems fitting, cannot and is here not being disputed.

In the trial of the Great Lakes case, the navigation needs of the Illinois waterway, then under construction, were not considered. After the Illinois waterway had become a Federal waterway, under act of July 3, 1930, an official report made under the provisions of this 1930 congressional act by the Secretary of War, included a recommendation that after the completion of the treatment plants of the sanitary district, and a period of not more than 2 years of observation and study be made to determine whether the 1,500 cubic feet per second in addition to domestic pumpage was sufficient to meet the needs of a commercially useful waterway. This report stated:

"Then, and only then can it be determined with reasonable certainty whether any additional diversion is necessary in order to provide decent and healthful living conditions for boat crews and river-terminal operators."

No such study or observation has been made, since the completion of the sanitary district's sewage treatment plants, by the Secretary of War or any other Federal agency.

H. R. 2 (the pending O'Brien bill) would authorize a temporary diversion of 1,000

cubic feet per second of additional water, for sufficient time only to allow the Army engineers and the United States Public Health Service to make the study recommended in the official report made in accordance with the congressional act of July 3, 1930.

In this record, as noted above, there certainly therefore is no indication of a "water steal." Every action taken by the advocates of increased diversion has been based on sound commonsense and in the interest of public policy for the entire Midwest region.

The resolution signed by municipal officials of the city of Milwaukee, Wis., is another document registering routine opposition to any additional diversion of water, whether it be for the benefit of navigation, or not. It mentions the expenditure of $10 million for modern navigation facilities and deep-draft channels. An analysis of these expenditures would show that only a small part of them was for additional draft and that of this part, the amount for five-eighths of 1 inch of depth would be insignificant indeed.

The editorial in the Milwaukee Journal of April 6, 1957, states that it would be a dangerous precedent to authorize a diversion which would lower lake levels three-eighths of 1 inch, which lowering would be added to the decline in levels of 3 feet since the 1952 high.

This is quibbling indeed. Lake levels may decline 2 feet more, before another rising trend begins. The periodic fluctuation in lake levels, based on monthly averages, is more than 6 feet. The Canadian diversion since 1943 of 5,000 cubic feet per second of water into the Great Lakes system at Lake Superior has raised the natural level of the lakes about 3 inches.

A precedent for interferenece with the natural levels of the lake has therefore been established long since by Canada, and Milwaukee and the opposing Lake States were silent.

In contrast to the Milwaukee Journal's consistent editorial opposition, it is interesting to note the contrary position of reversal of their previous opposition by the Cleveland Plain Dealer and the Peoria Journal Star. Photostatic copies of the Cleveland Plain Dealer of May 26, 1957, as reprinted in the Chicago Daily News on May 29, 1957, and of the Peoria Journal Star of August 24, 1957, are herewith submitted for the record. They state:

[From the Chicago Daily News of May 29, 1957]

"OHIO PAPER BACKS LAKE DIVERSION

"(Editorial from the Cleveland Plain Dealer, Sunday, May 26)

"Round 57 of the Chicago water battle has just ended in favor of the Windy City by a 222–143 point count. The round number approximates the years this famous debate has fumed; the points are symbolic of the most recent House of Representatives vote approving increased diversion.

"(EDITOR'S NOTE.—The Senate Public Works Committee will shortly take up the measure.)

"If the Senate and President Eisenhower (who twice previously has vetoed like efforts) concur, for a 3-year test period Chicago will be allowed to flush 2,500 cubic feet per second down her barge and sewage canal.

"That's 1,000 cubic feet per second more than at present. In gallonage it would total 1.62 billion per day. A trifle when compared to the 126 billion gallons which daily go down the drain at Niagara Falls, it still represents no mean stream. Greater Cleveland, on the steamiest of summer days, consumes less than a third that amount.

* * * * *

"Over the years we've listened to some fairly vivid language on diversion. From a position or resisting Chicago's efforts the Plain Dealer has come around to approving them—with reservations.

"The main reason is that the health and welfare of a great metropolitan area are paramount over lake shipping interests and any considerations of hydroelectric development.

"An unpolluted Lake Michigan—at least in the Chicago area—where the public can play and bathe in safety, puts other Great Lakes cities to shame.

"In no way do we underrate the importance of ore carrying to Cleveland. But we do dispute the argument of the Lake Carriers Association that three-eighths of an inch of lowered water is a serious financial threat.

"The three-eighths figure is what the Army engineers estimate a 3-year, 1,000 cubic foot per second additional siphon will do to Lake Erie.

"If diversion were a genuine menace, the various steel companies would be loud to say so. They'd be getting less ore cheaply by water and paying more for rail haulage.

"United States Steel Corp., Republic, and Youngstown Sheet and Tube, all operators of mills near Chicago on Lake Michigan, have stayed remarkably silent. Yet Lake Michigan's level would be lowered more than any of the others. Inland Steel Corp., another Chicago area producer, also is indifferent toward diversion.

"Next week much to-do will be made over at Detroit when dredging is inaugurated on the $150 million 'connecting channels' project.

"This will deepen passageways between the lakes to accommodate St. Lawrence seaway traffic. Depth will be 27 feet, enough to clear vessels drawing 25½ feet.

"It may appear inconsistent to be spending major sums to provide more water and at the same time to allow Chicago to take a little bit of that water away. Once completed, the dredging will provide ample clearance for any type of vessels; diversion won't matter."

[From the Peoria Journal Star of Saturday, August 24, 1957]

"The Lake Michigan diversion bill is sidetracked again in Congress, with no chance to get on the main track until January.

"Ten years ago we would have considered this good news, but not now. Chicago's treatment of its sewage is now such that the Illinois Valley would welcome a greater volume of lake water coming through the sanitary district and down the Illinois River, at least as a 3-year experiment.

"Only flimsy objections to this experiment have been heard from other lake States and Canada.

"A good case has been presented for the experimental increase in diversion, but it has been endlessly delayed by votes and parliamentary technicalities.

"Illinoisans in Congress should step up their fight for diversion in January. And the people of Illinois should give them hearty support."

The brief of the government of the Province of Ontario, submitted upon invitation to the Government of Canada, expressing opposition to the proposed temporary increase of Lake Michigan water at Chicago, as provided in H. R. 2, was inserted in the CONGRESSIONAL RECORD (p. 14483) by Senator WILEY, on August 26, 1957.

This Ontario brief, in part, stated:

"In making the protest the Province of Ontario is mindful of the terms of article 2 of the Boundary Waters Treaty between Canada and the United States, signed at Washington, January 11, 1909, and which states in part that the Province in common with other contracting parties has the right to 'object to any interference with or diversions of water on the other side of the boundary the effect of which would be productive of material injury to the navigation interests on its own side of the boundary.' Ontario feels that Lake Michigan is an integral link in the Great Lakes system and that any alteration in the natural flow should only be accomplished through agreement of abutting jurisdiction."

With respect to the foregoing, it may be noted that on March 1, 1956, the Chicago Bar Association approved the report of its committee on international and foreign law regarding the legal aspects of the then proposed legislation (H. R. 3210, 84th Cong., similar to H. R. 2, 85th Cong.) regarding the temporary increase of diversion of Lake Michigan water at Chicago.

That 1956 Chicago Bar Association report has heretofore been presented to the Congress at the hearings on the diversion bills. Its conclusions were:

"I. Congress has power under the commerce clause of the Constitution to authorize the additional diversion.

"II. Authorization of additional diversion would not violate the constitutional barrier to giving a preference to the ports of any State.

"III. The power of Congress to authorize increased diversion is not affected by the fact that the Supreme Court has in the past considered the subject matter and has retained jurisdiction to modify its decree.

"IV. Congressional action authorizing additional diversion at Chicago would not violate the mandatory provisions of the International Boundary Waters Treaty of 1909 or the Niagara Treaty of 1950. Whether Congress should await the report of the International Joint Commission pursuant to the 1952 reference under article IX (1909 treaty) is a question of policy to be decided by Congress. There are no rules of international law or principles of comity which introduce considerations different from those considered in connection with the 1909 treaty."

In 1957 (August 1, 1957) the Chicago Bar Association approved a supplemental legal opinion and report of its committee on international and foreign law as to H. R. 2, 85th Congress.

The conclusions of this supplemental report of the Chicago Bar Association on this phase are:

"A. The 1909 Boundary Waters Treaty as applied to the proposed diversion may make rules of general international law inapplicable and the treaty itself may authorize that diversion.

"B. If international law, independent of the 1909 treaty, prevails, still the proposed diversion is proper."

The foregoing legal conclusions of both the original 1956 opinion and the supplemental 1957 opinion of the Chicago Bar Association are directly contrary to the interpretation placed on article 2 of the 1909 treaty in the brief of the Province of Ontario.

A copy of the aforesaid 1957 supplemental legal opinion and report of the Chicago Bar Association on H. R. 2 (85th Cong.) is herewith submitted for the RECORD.

In passing it may be noted that the brief of the Province of Ontario is predicated upon a diversion on the other side of the boundary which "would be productive of material injury to the navigation interests on its own side of the boundary."

That there is no material injury to navigation interests by the proposed temporary diversion is clearly shown by the Army engineers' report (exhibit A of bar association's 1957 supplemental opinion), which held that the effect of a temporary diversion as proposed by H. R. 2 "is so small and of such temporary nature that it is impracticable to evaluate the effect in monetary terms."

The brief of the Hydro-Electric Power Commission of Ontario, also submitted for the RECORD (pp. 14484–14485) by Senator WILEY,

cites the same figures that were used by General Berrigan in his report, January 1957, on the effect on the Great Lakes of an increase of 1,000 cubic feet per second in the diversion at Chicago. The Hydro-Electric Power Commission arrived at conclusions somewhat different from the conclusions of General Berrigan, division engineer, and General Itschner, who reviewed his report. The monetary value of the power which would be lost by the temporary diversion, as figured by the hydro commission, is about the same as that computed by General Berrigan. The Hydro-Electric Power Commission figures this to be a serious matter, even though it is a theoretical loss of less than one-half of 1 percent of the total energy produced.

In regard to power, General Itschner stated:

"That the changes in theoretical dependable capacity are so small with respect to the total capacities of the power systems that assignment of value to the changes is not warranted, from a practical operational standpoint."

In regard to power, General Berrigan stated:

"For a 3-year increase in diversion, the temporary character of the effects on dependable capacities is such as not to warrant evaluation."

In regard to navigation, General Berrigan stated:

"However, it is not believed practicable to evaluate such effects because of the small extent of the lowering and also because of the temporary nature of the lowering there would be no means of estimating the lake stages which would prevail at the time lowering of lake levels is effective."

At the previous Senate subcommittee hearings on H. R. 3210 of the 84th Congress, it was suggested that Canada probably could increase its present diversion into Lake Superior and thereby offset the contemplated diversion of Lake Michigan water at Chicago.

Apparently in response to this proposal, the briefs of both the Province of Ontario and of the Hydro-Electric Commission of Ontario as submitted for the RECORD by Senator Wiley, rejected this recommendation, stating, in substance, all of the water so available for diversion into Lake Superior is presently being diverted and cannot be increased.

The brief of the Province of Ontario states:

"It has been suggested by some of the supporters of water diversion from Lake Michigan into the Illinois Waterway that the Province of Ontario might counteract any adverse effects of such diversion by increasing the Long Lac-Ogoki flow into Lake Superior. Our engineers advise us that such an increase is not possible however, since virtually all the inflow from the Albany River system is being diverted to the south. The present flow is approximately 5,000 cubic feet per second and Ontario regrets that there is no way in which this can be increased."

On the same phase, the Hydro-Electric Power Commission of Ontario's brief states:

"It is not possible to compensate for the increased diversion at Chicago by diverting additional flow into Lake Superior by way of the Long Lake and Ogoki Diversions, as all flow that can be so diverted is being diverted."

The statement in the Province of Ontario's brief that "virtually all of the inflow of the Albany River is being diverted to the south" is factually misleading. The Albany River is one of the largest rivers in Canada, and maps indicate that about 6,000 square miles of its upper watershed drain to a point about 120 feet higher than the Ogoki River pool, from which water is diverted into Lake Superior. A statement that "virtually all of the inflow of the Ogoki River is being diverted to the south," would be correct; and this may be what the author of the brief really intended to state but did not do so.

While the brief of the Province of Ontario, as above quoted, stated their engineeds advise that an increase of diversion as suggested into Lake Superior is not possible, may be respectfully offer the following action as a possiblity of Canada's increasing such diversion into Lake Superior and recommend that a study be made to that end.

The following recommendation, as to a possibility of Canada's increasing the diversion into Lake Superior was originally presented, at their request, July 1957, to the Great Lakes Commission by our Horace P. Ramey, chief engineer of the Metropolitan Sanitary District of Greater Chicago. Mr. Ramey is recognized as one of the Nation's outstanding hydraulic engineers and as an authority on Great Lake levels. In 1952 he was awarded the Octave Chanute Medal (established 1901) by the Western Society of Engineers for his prepared article on Great Lake Levels and Their Changes.

The present diversion from the Albany River watershed into Lake Superior by Canada started in 1939 by a diversion of approximately 1,000 cubic feet per second of water from the Kenogami River, a tributary of the Albany River, through Long Lake into Lake Superior.

In July 1943, 4,000 cubic feet per second annual average of water from the Ogoki River, above Waboose Rapids was diverted. This represented an average yield of about 0.75 cubic foot per second per square mile from the Ogoki River watershed of 5.545 square miles above Waboose Rapids.

The foregoing diversions at Lake Superior, into the Great Lakes system, of about 5,000 cubic feet per second has raised Great Lakes water levels an estimated 3 inches.

The capacity of the diversion works, from the Ogoki River to the Jackfish River, then Lake Nipigon and into Lake Superior is about 10,000 cubic feet per second. At present it is probable that all the water divertable from the Ogoki River watershed is being thus diverted.

However, the watershed of the upper Albany River, above Rat Rapids, including Lake St. Joseph (elevation 1.172) is approximately 6,000 square miles in area, and should yield an average of about 5,000 cubic feet per second of water. A dam 40 feet high could raise the water level of Lake St. Joseph to elevation 1.200 or about 127 feet higher than the level of the Ogoki River Pool. This difference in levels should be sufficient to cause a flow of 5,000 cubic feet per second from the Albany River Pool, through a proper cut through the Albany-Ogoki Divide. Maps indicate a low place in this divide on the line between Rat Rapids (on the Albany River) and Pike Lake (on the Ogoki River).

This suggested avenue of possible additional diversion, from the Albany River into the Ogoki River and thence into Lake Superior, as here presented by our chief engineer, we believe merits thorough investigation and serious consideration by Canada and is respectfully submitted to that end. * * *

Respectfully submitted.

CASIMIR GRIGLIK,
Trustee, Chairman, Special Committee on Federal Relations.

CHICAGO ASSOCIATION OF COMMERCE AND INDUSTRY,
LEGISLATION AND TAXATION DIVISION,
Chicago, Ill., August 29, 1957.

Senator PAUL H. DOUGLAS,
United States Senate Office Building, Washington, D. C.

DEAR SENATOR DOUGLAS: The August 26, 1957, CONGRESSIONAL RECORD carries the remarks of Senator WILEY together with certain material inserted in the RECORD by him, all in opposition to H. R. 2, the Lake Michigan water diversion bill. These remarks and the included material may be read and accepted by some as accurately portraying the Lake Michigan water diversion matter. Some answer should be made to the Senator's remarks since the RECORD does not accurately present the lake diversion problem or the justifiable need for the diversion of such water as provided by H. R. 2. On behalf, therefore, of the Chicago Association of Commerce and Industry, it is suggested that the contents of this letter be inserted in the CONGRESSIONAL RECORD.

Senator WILEY in his remarks states "Our past opposition to the Chicago water steal continues, and many reasons have arisen as well." To call the lake diversion legislation "the Chicago water steal" shows the lengths to which the opponents of lake diversion will go, not only to distort the true facts, but to prejudice the minds of those who may be trying to seek a true picture of the situation. It would seem needless to say that the 6 million people of the Chicago metropolitan area are not trying to steal water that is so badly needed for our health, safety, and welfare. People in the Chicago metropolitan area are asking the Congress, which has twice approved their plea by passage of this legislation, and the President, who has twice vetoed this legislation, to permit the diversion of such Lake Michigan water for the protection of their health. Certainly, this is not an effort to steal the water as the Senator stated.

Included in the material inserted into the RECORD is a letter addressed to Senator WILEY from the mayor of Milwaukee, the Milwaukee City Council, and the Milwaukee Port Authority which asks for defeat of H. R. 2 for the reason that the city of Milwaukee is spending $10 million in its port development. They advocate that the diversion provided by H. R. 2 would handicap shipping on the Great Lakes. It would see that we are to assume that this expenditure by Milwaukee and the Federal Government would be to no avail if H. R. 2 were passed since this minor diversion of Lake Michigan water would be, in their view, such a handicap to shipping. Their argument is without foundation. It should be of interest to the Senate as well as to the Milwaukee officials that 10 times what they are spending; namely, $100 million, is either now being expended or is planned for expenditure for the development of the Chicago harbor and the Cal-Sag Channel, all of which will be expended before the completion of the St. Lawrence seaway. It may further be of interest to know that some $1 billion in new industrial plants and facilities will be invested in the Chicago metropolitan area as a direct result of the construction of the St. Lawrence seaway project, the widening of the Cal-Sag Channel, and the port of Chicago developments. It would seem, therefore, that anyone who honestly desires to appraise the situation would agree that the vast Chicagoland manufacturing and shipping interests as well as the whole Chicagoland community would not spend these vast amounts if there were any reason to fear a loss of shipping due to the diversion of Lake Michigan water into the Illinois Waterway.

The Chicago Association of Commerce and Industry hopes that you advise the Senate that it has made its own study and given consideration to the recent reports of the United States Corps of Engineers with respect to this matter. We are firmly convinced that the passage of H. R. 2 will not adversely affect shipping in the Great Lakes.

Adequate consideration must be given to the importance of diversion for sanitary reasons. Just as the opponents to diversion in the early days of Chicago gave no consideration to the typhoid epidemic, later solved by our engineering science, is there no consider-

ation today by some opponents for the plea that diversion is needed for the health and welfare of a great metropolitan area. Science cannot correct today's situation. The dissolved oxygen required to clean and keep clean the Chicago River and the Illinois Waterway can only be provided by the diversion of Lake Michigan water. Today the metropolitan sanitary district of Greater Chicago, which has been cited as one of the seven engineering wonders of the world, serves some 4,600,000 people and some 125,000 industrial and business firms covering some 900 square miles of area. It handles the sewage of some 4,600,000 humans and the industrial waste equivalent to over 3½ million people, making a total waste equivalent to well over some 8 million persons. Today the sanitary district is able to purify this sewage to the extent of 90 percent, meaning that some 10 percent of microscopic waste which cannot be treated or purified to any greater extent is left in the effluent that is put into the Chicago River and the Illinois Waterway. This means that the equivalent of the untreated waste of some 800,000 persons is daily dumped into the Illinois Waterway. This is necessary even by the finest treatment plant in the world.

With respect to the legal aspects of the lake diversion legislation, the Chicago Bar Association, at the request of the Chicago Association of Commerce and Industry, prepared an opinion in 1956 which has been heretofore presented to the Senate in connection with H. R. 3210, 84th Congress. Recently, a supplemental opinion on this matter was prepared by the committee on international and foreign law of the Chicago Bar Association under the chairmanship of Sidney G. Craig. It is my understanding that the 1957 supplemental opinion of the Chicago Bar Association has heretofore been placed in the CONGRESSIONAL RECORD and should make adequate reply to any recently developed legal phases of this legislation.

Within the decade ending in 1960, it is estimated the population of this metropolitan area may increase some 1 million persons, and this with the corresponding industrial expansion will mean the equivalent of the untreated waste of some 1 million persons will be dumped daily into the Chicago River and the Illinois Waterway. The situation is serious. The benefits of H. R. 2, the lake diversion legislation, cannot in good conscience be postponed much longer.

With kindest personal regards.

Yours very truly,

PRESTON E. PEDEN,
Director.

Majority Rule Wanted by American Veterans

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a resolution adopted by the board of directors of the United American Veterans at their meeting on August 28, 1957, in Washington, D. C., be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

A special meeting of the board of directors of the United American Veterans was called for the purpose of discussing majority rule. This meeting was held on August 28, 1957, at national headquarters, 1129 Vermont Avenue NW., Washington, D. C.

Whereas daily our lawmakers introduce bills in the Senate and in the House; and

Whereas the lawmakers who introduce such bills, feel that those bills have merit, or they would not introduce them; and

Whereas when those bills are introduced they are sent to the proper committee. This committee then sends the bill to the subcommittee entitled to pass on said bill; and

Whereas the chairman of each committee should take each bill in turn, pass on it; and

Whereas if that committee approves the bill it should be sent to the floor of the Senate, or House for action; and

Whereas if the committee disapprove of said bill, that committee should state the reason, and send the bill to the floor of the Senate, or House for action; and

Whereas as matters stand today, the chairmen of the different committees pass judgment on said bill, and if he feels that said bill does not suit his ideas, he pigeonhole said bill and it dies for want of action: Be it therefore

Resolved, That the United American Veterans go on record as calling upon the majority and minority leaders of the Senate and the House to take whatever action is needed in order to compel a chairman to send each and every bill to the floor of the Senate or House so that each body may vote on said bill; be it further

Resolved, That copies of this resolution be sent to the President of the United States, to the majority and minority leaders of the Senate, and to the majority and minority leaders of the House, and to the press.

THOMAS DIXON,
National Commander.
FRANCIS F. LEBRUN,
National Adjutant.

A National Cultural Center Plan for the Mall Area in the Nation's Capital

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, on August 8, 1957, the House voted 2 to 1 against a plan to locate the National Cultural Center in the so-called Foggy Bottom area of the District of Columbia.

Since that time I have been working on a draft bill to provide for the construction of the National Cultural Center in the District of Columbia on part of the land made available for the Smithsonian Gallery of Art.

My bill, on which I completed work recently, directs the Regents of the Smithsonian Institution to utilize so much of that tract of land in the District of Columbia referred to in the first section of the resolution of May 17, 1938—title 20, United States Code, section 76—as is bounded by Fourth Street SW., on the east, Seventh Street SW., on the west, Independence Avenue on the south, and Adams Drive on the north, title to which is in the United States, and shall construct thereon a public building which shall be known as the National Cultural Center. The National Cultural Center shall be under the supervision and control of the Regents.

The Congress for a century has thought of the Mall area between 4th and 14th Streets, and Constitution and Independence Avenues, as the location for cultural activities and buildings devoted to them. The Congress, as a result of this conviction, has placed there the Smithsonian Institution and its branches: the Freer Gallery, the National Gallery of Art, the National Museum, the new Museum of History and Technology, and it authorized the building there of a Smithsonian Gallery of Art.

During the 84th Congress I campaigned to have this administration reverse itself regarding the historic Patent Office Building which had been designed by Robert Mills, one of our country's great architects who designed the Treasury Department Building and the Washington Monument.

This administration seriously recommended to the Congress that the Patent Office Building be razed for a parking lot on the site.

When the administration finally reversed itself as a result of this campaign it tried to take credit for saving the building.

Saved it was, and the plan now is to use it as a great art gallery.

Senator HUBERT H. HUMPHREY, Senator CLINTON P. ANDERSON, and I have sponsored legislation in the 85th Congress which would utilize the building for the century-old National Collection of Fine Arts and a National Portrait Gallery.

These measures, if enacted into law, would leave the Mall site, set aside for the Smithsonian Gallery of Art by the 75th Congress, free for other purposes. In the absence of any better proposal, some of the officials of the Smithsonian Institution have suggested that the Mall site be used for a National Air Museum.

The bill which I have developed provides, instead, that the National Cultural Center be located on the site set apart for a cultural center in 1938. My bill also provides that the National Cultural Center shall be a branch of the Smithsonian Institution in the very same way that the Freer Gallery, the National Gallery of Art, and the National Collection of Fine Arts are branches of that Federal agency.

The Congress in its wisdom has provided a site on the Capitol Grounds for a memorial to the late Senator Robert A. Taft, of Ohio. It has also established a Franklin Delano Roosevelt Memorial Commission to plan a fitting memorial to former President Roosevelt.

President Roosevelt was deeply interested in the fine arts as was proved by the role he played in establishing the National Gallery of Art and the American National Theater and Academy. He has been cited by knowledgeable people as "the most intelligent President about art since Jefferson."

I think it would be fitting to provide that the National Cultural Center shall include a Franklin Delano Roosevelt Memorial Theater in the spirit of the resolution entitled "Joint resolution to establish a commission to formulate

plans for a memorial to Franklin Delano Roosevelt," approved August 11, 1955 (69 Stat. 694).

Finally, my bill provides that the Regents of the Smithsonian Institution shall solicit subscriptions, gifts, and bequests of money, securities, and other property of any character whatsoever, for the purpose of constructing, furnishing, equipping, and presenting cultural programs at the National Cultural Center.

The National Cultural Center, under my bill, shall be self-financed.

This is the reason that I am of the opinion that my plan for a National Cultural Center will work.

I include here the text of my bill for the information of my colleagues, in the hope that they will join with me in sponsoring it.

Also, I include an article from the Washington Evening Star which gives some of the background of my plan. Although the article was written in 1955 it seems to me to be very timely in connection with my new measure.

A bill to provide for the construction of a National Cultural Center, to include a Franklin Delano Roosevelt Memorial Theater, in the District of Columbia on part of the land made available for the Smithsonian Gallery of Art, and for other purposes

Be it enacted, etc.—

SHORT TITLE

SECTION 1. This act may be cited as the "National Cultural Center Act."

NATIONAL CULTURAL CENTER

SEC. 2. (a) In order to provide a suitable building for the presentation of music, opera, drama, dance, and poetry which is deserving of recognition as a part of the great heritage of our civilization, and to memorialize our great artists (both living and dead) who have contributed to the advancement of these arts, the regents of the Smithsonian Institution (hereafter in this act referred to as the "regents") shall utilize so much of that tract of land in the District of Columbia referred to in the first section of the resolution of May 17, 1938 (20 U. S. C. 76), as is bounded by Fourth Street SW. on the east, Seventh Street SW. on the west, Independence Avenue on the south, and Adams Drive on the north, title to which is in the United States, and shall construct thereon a public building which shall be known as the National Cultural Center. The National Cultural Center shall be under the supervision and control of the regents.

(b) The National Cultural Center shall include a Franklin Delano Roosevelt Memorial Theater in the spirit of the resolution entiled "Joint resolution to establish a commission to formulate plans for a memorial to Franklin Delano Roosevelt," approved August 11, 1955 (69 Stat. 694).

(c) (1) The regents shall utilize, insofar as possible, the design for a national theater developed by the American National Theater and Academy and presented to President Truman in 1951, as the design for the National Cultural Center. Provision shall be made for parking facilities in the vicinity of the National Cultural Center and for landscaping the grounds surrounding the National Cultural Center. The National Cultural Center shall not include facilities designed specifically for conventions, trade fairs, or commercial exhibits.

(2) The regents shall authorize the preparation of the site referred to in subsection (a) of this section and the construction of the National Cultural Center thereon, including approaches, landscaping, and other related facilities.

(3) The Administrator of General Services shall supervise the preparation of plans and specifications and the actual construction of the National Cultural Center without reimbursement. For such purposes the Administrator of General Services shall make all necessary contracts and may employ such consultants as he may deem necessary.

DUTIES OF THE REGENTS

SEC. 3. In carrying out their duties under this act the regents shall—

(1) present at the National Cultural Center classical and contemporary music, opera, drama, dance, and poetry of the highest type from this and other countries;

(2) establish resident repertory companies in such arts as an activity of the National Cultural Center;

(3) promote public interest in the arts of music, opera, drama, dance, and poetry by publishing a periodical devoted to the activities of the National Cultural Center and by making the programs presented at the National Cultural Center available for dissemination by radio, television, and motion picture;

(4) take such other steps as will, in the judgment of the regents, encourage the study and presentation of such arts in the schools, and as an activity of State and local governments;

(5) solicit subscriptions, gifts, and bequests of moneys, securities, and other property of any character whatsoever, for the purpose of constructing, furnishing, equipping, and presenting programs of such arts at the National Cultural Center;

(6) receive and administer moneys, securities, and other property received pursuant to paragraph (5) of this section; and

(7) consult with the National Cultural Center Commission established by section 5 of this act with respect to the most suitable means of carrying out the duties of the regents under this section.

POWERS OF THE REGENTS

SEC. 4. The regents may for the purposes of this act—

(1) appoint and fix the compensation and duties of a Director of the National Cultural Center;

(2) employ such other personnel to work under the supervision of the Director of the National Cultural Center as they may deem to be necessary for the efficient operation and administration of the National Cultural Center;

(3) sell or exchange such securities and other properties received pursuant to section 3 (5) as they may deem advisable;

(4) invest or reinvest moneys and the proceeds of securities and other properties received pursuant to section 3 (5), in such investments as they may deem advisable;

(5) place moneys, securities, and other property received pursuant to section 3 (5) in such depositories as they may deem suitable for that purpose; and

(6) expend moneys and the proceeds and income from securities and other property received pursuant to section 3 (5) to carry out the purposes of this act.

NATIONAL CULTURAL CENTER COMMISSION

SEC. 5. (a) There is hereby established a National Cultural Center Commission (hereafter in this act referred to as the "Commission"). The Commisison shall consist of—

(1) the Librarian of Congress, the Chairman of the Commission of Fine Arts, the President of the Board of Commissioners of the District of Columbia, and the Chairman of the District of Columbia Recreation Board, who shall be ex officio members of the Commission;

(2) seven persons appointed by the President of the United States;

(3) seven persons appointed by the President of the Senate at least four of whom shall be Members of the United States Senate; and

(4) seven persons appointed by the Speaker of the House of Representatives at last four of whom shall be Members of the United States House of Representatives.

Any vacancy occurring in the Commission among members appointed pursuant to paragraph (2), (3), or (4) shall be filled in the same manner as the original appointment was made.

(b) Persons appointed to the Commisison other than Members of the Congress and officers or employees of the United States shall be persons who are recognized for their knowledge of or experience in, or for their interest in one or more of the arts referred to in section 3 (1). In making such appointments the President of the United States, the President of the Senate, and the Speaker of the House of Representatives shall give due consideration to the recommendations for nomination submitted by leading organizations concerned with the arts referred to in section 3 (1) including but not limited to thefollowing national organizations: Actors' Equity Association, American Council on Education, American Council of Learned Societies, American Educational Theater Association, American Federation of Musicians, American Federation of Radio-TV Artists, American Guild of Musical Artists, American Guild of Variety Artists, American National Theater and Academy, Associated Actors and Artists of Ameri , Association of American Colleges, Children's Theater Conference, Council of Living Theater, Dramatists' Guild, General Federation of Women's Clubs, National Association of Concert Managers, National Association of Legitimate Theaters, National Association of Radio and Television Broadcasters, National Association of Schools of Music, National Education Association, National Federation of Music Clubs, National Music Council, Motion Picture Association of America, Inc., Music Educators National Conference, and Screen Actors Guild.

(c) The Commission shall—

(1) advise and consult with the regents with respect to financing the construction of the National Cultural Center;

(2) advise and consult with the regents with respect to the duties of the regents under section 3 of this act; and

(3) assist the regents in carrying out section 3 (5) of this act.

(d) The term of office of each member of the Commission appointed pursuant to paragraph (2), (3), or (4) of subsection (a) shall be for 4 years.

(e) (1) The Commission shall meet at the call of the regents but not less than six times each year.

(2) Members of the Commission shall serve without compensation, but each member of the Commission shall be reimbursed for travel, subsistence, and other necessary expenses incurred by him in connection with the work of the Commission.

INTERAGENCY COMMITTEES

SEC. 6. The President is authorized to create such interagency committees as in his judgment may be of assistance to the regents in performing their functions under this act. Such committees shall include individuals having special knowledge and experience in the arts of music, opera, drama, dance, and poetry, as well as individuals whose knowledge and experience in other fields will assist the regents in performing such functions; and may include representatives of each department and agency of the Federal Government which carries on any activities related to any of such arts whether or not such department or agency has any primary concern or responsibility with respect of any of such arts. The provisions of section 214 of the act of May 3,

1945 (31 U. S. C., sec. 691), shall be applicable to any interagency committee created pursuant to this section.

REPEAL PROVISIONS

SEC. 7. The following acts are hereby repealed—

(1) the act entitled "An act to incorporate the National Conservatory of Music of America," approved March 3, 1891 (26 Stat. 1093); and

(2) the act entitled "An act creating a Federal commission to formulate plans for the construction in the District of Columbia of a civic auditorium, including an inaugural hall of Presidents and a music, fine arts, and mass communications center," approved July 1, 1955 (69 Stat. 243).

[From the Washington Sunday Star of September 18, 1955]

FUNDS FOR AUDITORIUM AVAILABLE, OFFICIAL SAYS

(By Farncis P. Douglas)

NEW YORK, September 17.—Robert W. Dowling, member of the commission being formed to plan a civic auditorium for the Capital, is confident $15 million can be raised for the project.

This money would be in outright donations. It would make unnecessary planning the financing of the structure on a self-liquidating basis, as directed by Congress.

"If the Federal Government donates the land," he said, "it should do it contingent on the money being raised and it should set a time limit," Mr. Dowling said. "I think there ought to be a 2-year restriction."

He said the money can be raised on a nationwide basis from individuals, the foundations, the theater—"it could raise a great sum through benefit performances"—the moving-picture industry, and other groups.

EXPERIENCED FUND RAISER

Mr. Dowling takes time from business—big business—for an enthusiasm for the theater. And he knows about raising money. He is engaged in the real-estate and building business in New York. He is president and director of the City Investing Co. and a director of Starrett Bros. & Eken, the largest in their fields. He is director of almost a dozen other companies. His interests control the National Theater, the Playhouse, and the Du Pont Theater in Washington.

He is chairman of the American National Theater and Academy (ANTA). This is a nonprofit foundation chartered by Congress in 1935 to promote the American theater. It is in charge of this country's international exchange program, which sends American plays like Porgy and Bess overseas.

When the French Government suggested last summer that the United States stage an American Festival of Arts in Paris, the State Department accepted. But there was no money for the project. Mr. Dowling raised the necessary $400,000 through private subscriptions. The American program in Paris included the presentation of Thornton Wilder's Skin of Our Teeth, with a topnotch cast.

INTEREST LONGSTANDING

Mr. Dowling's interest in an auditorium for the Capital is of a number of years' standing. He testified in favor of the bill setting up the Commission to plan a civic auditorium, to include an inaugural hall of the Presidents and a music, fine arts, and mass communications center.

It was natural that the seven members named to the Commission by Speaker RAYBURN should include Mr. Dowling. Vice President NIXON named 7 members Friday and announcement of President Eisenhower's 7 appointees is expected shortly.

The law specifies that the Commission shall report by next February 1. Mr. Dowling believes that allows plenty of time.

"There is no mystery involved," he said. "It is not like splitting the atom or launching a satellite. An auditorium can be established using the arts and skills already developed."

He suggested that the auditorium should seat 4,000, but said that is something for the Commission to work out. He mentioned it as a fair guess, just as he had mentioned $15 million as "not an exact sum, but a good start."

ACCORDION PLAN FAVORED

Of the auditorium he said:

"I should like to see it built on what I would call the accordion plan—an auditorium seating 4,000 one night and contracting to seat 1,000 the next night, with no vacant seats. It is of enormous importance always to have the room full.

"This accordion plan is entirely practical. It can be accomplished in either of two ways. One is by movable walls. The second is by movable drapes suspended from ceiling tracks.

"In the case of the walls, they could either be raised from the floor or, again, suspended from ceiling tracks.

"The hall should be fitted to the performance. You could have a magnificent chamber music concert but in a big hall the three or more players would be like flies on the distant stage. For a full-scale opera or ballet you would want the entire hall."

NOT JUST THEATER

He dismissed the idea that the auditorium should be for the theater alone. He said it could be used for important meetings of state, for international meetings, and to provide a chamber for the inauguration of Presidents, as the law contemplates.

The building, he said, should also provide facilities for schools of music, the drama and painting and it could become a great center in those fields. This would help in raising money, he pointed out, because some give more quickly to education than to other purposes.

In the auditorium he would like to see 50 boxes, probably more. He explained there should be a presidential box and suggested a box named for each State in which the Governor of the State or the State's representatives would be welcome.

Discussing the need for the building he said many factors are obvious but some are not so obvious.

"When we send abroad an exchange program, exchange is a misnomer if we can't receive something here in return. These have been making friends for our country. But then artists, producers, musicians ask when they can come here."

NO THEATER AVAILABLE

"There is no commercial theater you can book them into in midseason. Every New York theater manager hopes to book his house for a whole season. With the exception of the National in Washington, where you might find a couple of weeks in the winter, there is no other place to play. New York is practically closed.

"You just have to have an adequate house, not only for the theater, but for ballet, opera, concerts—all the performing arts need it."

As far as Mr. Dowling is concerned, the site is an open question. Asked about a site on L'Enfant Plaza in the projected Zeckendorf development of Southwest Washington, Mr. Dowling said a consideration would be what other buildings—assets of national importance—would form the surroundings.

Parking, he said, should be an important consideration in the site selection. "We want this to be a theater of the people," he said, stressing that parking facilities must be available.

Suggestions were made initially that the building should include a big convention hall. Mr. Dowling thought this would be a mistake. It would put Washington in competition with other cities which seek big conventions. He would rather, he explained, keep the building to the field of culture and artistic achievement.

He saw no hurdle in the way of working out an acceptable manner of control. The building might be under the National Park Service, he suggested. Or it might be administered by a board of trustees similar to the board which administers the National Gallery of Art. Someday, he speculated, there might be an American counterpart to the ministers of culture of other countries and the center would be in his department.

Illustrating Mr. Dowling's longtime interest in such a project here is an incident which occurred more than 5 years ago. He and Belvins Davis, producer of Porgy and Bess, came to Washington and proposed a civic auditorium to President Truman.

The True Story of the Texas Tech Firings

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. YARBOROUGH. Mr. President, recently we had a great miscarriage of justice in Texas. Three highly qualified professors were fired without a hearing and in secrecy by the board of directors of Texas Tech at Lubbock, Tex.

Since the unwarranted firings, which were motivated by political reasons, the press of Texas has almost unanimously joined in condemning the action.

One of the great editors of Texas, H. M. Bagley of the Tulia Herald, was one of the first to deplore the undemocratic action. His fearless editorials and his great reporting of the incident has won the praise of all Texans. In the July 25, 1957, issue of the Herald, Editor Bagley runs a collection of comments from many of the papers in the State. Almost to a paper the comments deplore this injustice. In the same issue, Editor Bagley's Town Topics column, one of the top award-winning columns in the State, deals with the same issue in his usual fearless, enlightened and entertaining manner.

I ask unanimous consent of the Senate to insert these two articles in the appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

TEXAS EDITORS UNLEASH STINGING CENSURE OF TECH DIRECTORS

Texas newspapers, large and small and of varying political philosophies, reacted summarily and with overwhelming unity in censuring Texas Tech regents for firing two professors in secret session, without a hearing, and without the advice of the professors' department heads. Many also condemned the political undertones of the scandal, feeling that the action of the regents is a threat to free speech.

Even ultraconservative Dallas News and Fort Worth Star-Telegram editorially condemned the regents. The conservative Lubbock Avalanche-Journal deplored the action.

As this is written, no editorial has yet appeared in defense of the regents. A num-

ber of papers have strangely avoided the incident, but none have defended it.

Here is a sample of the editorial comment:

Bascom Nelson in the Castro County News (Dimmitt): "We have often been amazed at the vicious tactics employed by the former Shivercrats who are known now simply as conservatives * * *. Firing the Tech professors is perhaps no worse than other things they have done, but this act points up a test of the type of man our present Governor will choose to be. If he lets the Tech board of directors' action go without saying anything, then we are still saddled with an administration that is greedy, corrupt, and power-seeking * * *. Things have reached a sad state when men cannot practice their political convictions without fear of losing their jobs * * *. To make it look even more ridiculous, J. Evetts Haley, who isn't qualified to be on the public-school board of Podunk Hollow, is a member of the Tech board. There probably isn't a more radical outspoken, leftwing politician in the country * * *. Political observers over the State on both sides of the fence have noted that political morals are degenerating from what our Founding Fathers envisoned."

Cecil Waggoner in the Claude News: "We should bombard the Texas Legislature immediately with requests to close down Texas Technological College. When a board of regents can tamper with the academic freedom of its teachers and dictate their politics, that institution ceases to be a place of learning."

Elton Miller in the White Rocker (Dallas): "He (Abernethy) was kicked off the faculty because he dared to speak his mind. His mind does not run in the same channels as such men as J. Evetts Haley * * *. It is difficult to believe that in modern America, a professor or a teacher cannot be a good citizen and express his political beliefs. Narrow-minded bigots like J. Evetts Haley make it so * * *. These are dangerous times."

Troy Martin in the Olton Enterprise: "The Shivers regime is still with us. The man in the vortex of the trouble apparently is J. Evetts Haley, a Shivers appointee to the Tech board of directors. Trouble seems to gravitate to Mr. Haley. His tenure since appointment, according to Lubbock sources, has been marked with strife * * *. The only reasons advanced for the firing were given by Haley who questioned the competence of the professors * * *. We submit that such a statement on the part of Mr. Haley, without giving the men affected the right to answer publicly in front of the board, showed a marked lack of courage and a lack of plain commonsense."

Ernest Joiner in the Ralls Banner: "Reasons for their ouster have remained as secret as the meeting itself. But no reasons were necessary, considering the board is constituted, among others of J. Evetts Haley of Canyon. Haley believes in (and in this order) General MacArthur, Joseph McCarthy and God. Another is concerned with keeping the Democratic Party firmly in the hands of Republicans and hyphenated, hybrid political crumbs who haven't got the guts to call themselves Republicans * * *. Outside the classroom, and as a good citizen interested in good Government, he (Abernethy) is active in a political party. He is doing exactly what this drugstore cowboy-self-styled philosopher from Canyon has been doing for years. Haley is one of those superpatriots. He officers such organizations as Texans for America. If the America First outfit were alive today, our guess is that he'd be shuffling his booted foot on the speaking platform, rolling Bull Durham cigarettes with one hand, and with the other slapping his critics silly with the American flag neatly wrapped around a lead pipe. He has had a lot of things to say about returning this country to the principles of the Constitution, yet few men have done more to deprive some Americans of their rights under the same Constitution than he. He's been in politics up to his blue-jeaned rump ever since he first discovered there was "dough in them political hills." He's got about as much right to be vindictive toward Dr. Abernethy as this editor has to deny that Haley's beloved plains buffalo chips fire the best coffee this side of the Pecos * * *. To discharge Dr. Greenberg for advocating the enforcement of the supreme law of the land is like unfrocking a priest for believing in God * * *. We hate to see some 8,000 students turned into jackasses through the actions of a minority of crackpots handpicked by Allan Shivers to do just what they're doing now * * *. The way educational institutions and honest professors have been kicked around since Joe McCarthy crawled out of the ooze is on the way to becoming an accepted facet of our existence. Personally, though, if drugstore cowboy Haley will park his brace of Gene Autry .45's, we still think we can whip hell out of him in a fair fist fight—Constitution or no Constitution."

W. H. Curry in the Crosbyton Review: "West Texas, in general, and Texas Tech in particular, have no place in governing circles for such small, vindictive men as J. Evetts Haley, of Canyon, and at least three other men on the college's board of directors have proved themselves to be. Petitions asking for Haley's and his cohorts' resignations should be circulated all over this area, and anyone who recognizes Texas Tech's value to west Texas should be happy to sign them. It seems west Texas is still paying for the administration of Allan Shivers as Governor, as it is his appointees to the Tech board who were the ringleaders in the infamous action of the group * * *. Even the highly conservative Lubbock Avalanche and Fort Worth Star-Telegram took the board to task for an action that can possibly result in Tech's being thrown out of the Southern Association of Colleges."

Lubbock Avalanche: "A regrettable incident occurred at Texas Tech Saturday * * *. The morning Avalanche questions the board's method on such matters, taken in secret and closed session. Texas Tech is a tax-supported institution. Funds for its operation come from the people. Therefore, any action taken by the college board is of concern to the people. Any action should be open and aboveboard and taken in an open meeting so that the people may know not only of the action but the motives and objectives behind it. The people have a right to know * * *. Two professors have been fired without apparent cause, except on the presumption that they differ in political views and activities from members of the board."

Editor Morris of the Eastland Telegram: "Far be it from me to criticize Haley. He might be governor some day and run me out of Texas."

Jimmy Gillentine in the Hereford Brand: "Firing through "executive session' and keeping back the reason may work out for the Ole Cowboy (Haley) on his ranch, but not when the folks in question are being paid through tax-collected funds. Maybe someday we will get the whole story."

Jacob Shoaf in the Wood County Democrat (Quitman): "Dr. E. N. Jones, president of the college, has vigorously protested the secret meeting of the board. He believes in the right of fair play and thinks that a man should be given the right to defend himself before his accusers. To us this is simple American justice, and Haley, who claims to be a Constitutional Conservative, thought that he was doing Texas a favor when he ran for Governor last election. We don't need men of this caliber on the board of our State colleges, much less in the Governor's chair."

D. E. Alford in the Moore County News (Dumas): "Secret, or so-called 'executive,' sessions chalked up more victims in Texas this week. This time it was two professors at Texas Tech * * * These actions of dismissal were not taken behind the Iron Curtain, but in a closed-door session * * * Tech's board of directors, or that portion that was present when these men were dismissed, should be strongly censured for their unreasonable actions—which they refused to conduct in open session—and should be required to conduct an open hearing on the matter." Alford titled his editorial, "Red Tactics in Texas."

Orlin Brewer in the Levelland Sun News: "The current furor over at Texas Tech is indicative of what can happen when men in public positions of responsibility forget that their first duty is to the people they serve and that they have no right to hide the basic facts from the people. Secret meetings have no place in the American way of life, whether it is a college board, a public-school board, a commissioners court, city council, or other organizations of government * * * Only one possible good can come from the fiasco perpetrated by men who should have had better sense. It can serve as an example for men in public places everywhere of how not to conduct public affairs."

There are many facets to the now famous Texas Tech debauchery in which the Shivers-Daniel board of regents met in secret session, expelled the president of the college from the meeting, and fired two of the college's top faculty members of long tenure—all this without consultation with the president, the heads of the departments in which the professors taught, or with the professors themselves.

This jewel on the board from Canyon, J. Evetts Haley, offered the explanation that the two professors "did not measure up to the high intellectual and academic standards set by the board for the college." The president of the college and the professors' department heads promptly replied, in so many words, that Haley was all wet.

Speaking of Haley, we are reminded of the profoundness of his conversation by some remarks penned by Editor Archer Fullingim, of Kountze, last summer during the gubernatorial race in which Haley was asking us to name him chief executive of this State:

Wrote Fullingim:

"Are we Texans first, southerners first, or Americans first? We all know the answer to that one. We are Americans first and we all react the same to dangers to our country. When chips are down, it's our country right or wrong, but our country.

"Thus only a screwball or a stupid demagog could have declared in Hearne at the Alfalfa Festival that only in the South do 'people have character, courage, and the stamina to stand up and fight.' That remark made by one J. Evetts Haley, a radical candidate for governor, seemed to imply that the rest of the American people are cowards—if he didn't imply that, what was he implying?"

Many northern, eastern, and western men, stationed at a nearby camp, were in the audience when Haley made this asinine remark, and one by one they got up and walked out.

Whereupon Judge RALPH YARBOROUGH, who was on the platform, almost engaged Haley in a fist fight.

One facet to be considered is the position in which Dr. E. N. Jones, Tech president, has been placed.

As Editor Jacob Shoaf wrote in the Wood County Democrat, "Dr. Jones is one of the finest educational figures in the Nation. He was one of the pillars upon which Baylor University rode through the great depression of the thirties, and every student who attended Baylor while he served as dean of that school would vouch for his sincerity and integrity * * * Regardless of which way the political winds blow in this controversy,

Dr. Jones will be standing on the side of right, fairness, and uprightness."

Dr. Jones was not directly involved in the incident. To protect himself and his position, he could have remained neutral and aloof; he could have quietly permitted the professors to have been thrown to the wolves. But honor would not permit him or any other honorable man to take this course. At the risk of his own job, he stepped forward to challenge this miscarriage of justice and simple honor.

An obvious breach now exists between Dr. Jones and the regents. If he stays on at Tech, there necessarily will be tension; his job will not be pleasant.

Here we have a dark cloud brought into this man's life by several bigoted regents who alone are to blame for the unfortunate incident. Who will suffer from this stupidity? Will it be the regents who alone are responsible?

Certainly not. It's just one more page in their lives. They'll continue with their professions and positions unscarred. Dr. Jones, the innocent one, will be the one who suffers from the wrongdoings of the guilty.

Such is life.

Another facet to be considered is the part the big utilities may have played in this travesty of justice, honor, and decency.

Since Price Daniel is the tool of big oil, big gas, and big business in general, it came as no surprise to any observant person when in the opening days of his administration he hurriedly filled a number of vacancies with big-business appointees. It was logical that he turn to oil and gas and to the Texas Manufacturers Association to find men to run our institutions of higher learning. What peculiar qualifications big business has to run a school, we don't know. Nevertheless, he turned to C. I. Wall, of Amarillo, president of Pioneer Natural Gas Co., and Harold Hinn, of Plainview, a wheel in the Texas Manufacturers Association.

We do not know what part Mr. Wall or Mr. Hinn played in the un-American activities of the regents when they met a week ago Saturday. This we do know: We have read of no protests made by either against the action taken. They voted with Haley.

It is not surprising that the big utilities and the TMA would give their blessing to slapping down Democrats wherever they might be found, particularly those teaching in our colleges. We have already seen what has happened in many church colleges where big business dominates their boards of directors.

Quite piously, the big utilities do a lot to muster favor with the public. They are big and powerful, but they still operate in our communities by franchise. They still have to come before city councils and ask for rate increases.

It isn't often that they outwardly take part in controversial issues. Outwardly they are expert fence straddlers as they try to court the public.

Only in rare instances does the light of publicity discover their efforts to represent big business instead of the people whom they are supposed to serve.

No doubt the Tech regents felt quite secure as they sat in their secret session in Lubbock on black Saturday.

Little did they dream that their treachery would be exposed in 96-point headlines in the Avalanche-Journal the next morning.

There is perhaps one difference between Haley, alleged perpetrator of the nefarious act, and the other regents.

Being the extrovert that he is, Haley isn't at all embarrassed when he sees his name in the newspapers as a result of some of his screwball political antics. Some of the others may think like Haley, but no doubt they are more sensitive to adverse public relations. Some of these men represent organizations which don't need public censure such as is being heaped upon them at the present time.

Consider Mr. Wall's position. Perhaps he is too close to his circle of oil and gas friends down at the Amarillo Club to know what the masses of people are thinking about him at the present time. Maybe he just doesn't know how the people who buy his gas think.

Mr. Wall might mull over the fact that there are many more people in Amarillo and in the many west Texas communities his company serves who think like Dr. Abernethy than who think like his bay-windowed Republican friends at the Amarillo Club.

The last several elections have proved this.

Since this incident happened at Tech, we have talked to hundreds of persons concerning the matter. To date we haven't discovered a person who doesn't censure the regents. We haven't read a word in any newspaper favorable to the regents.

We regret that Mr. Wall has incurred the wrath of the public as a result of his part in the unfortunate incident right at a time when Swisher farmers are boiling over the cost of their natural gas.

Many Swisher farmers, within recent months, have at their own expense put in their own natural gas lines to serve their irrigation wells. The investment has been terrific. Then almost before the lines were installed, up went the rates on natural gas.

They are in a position of having to stay with natural gas because their investment in their lines is too great to abandon it.

Realizing that the gas company has them over a barrel, farmers have been calling us by telephone, cornering us on the streets, asking us to let the public know what has been happening and urging that the matter be investigated by the legislature.

It's a funny thing—30 years of goodwill in a community have been known to melt like a snowball because of one false step.

We hope it doesn't happen to Pioneer Natural Gas Co.

In all fairness to Mr. Wall, and we are trying to lean over backward in an effort to be fair, may we say that if he is not guilty of concurring with the infamous action taken by the board of which he is a member, let him publicly issue his own minority report. Let him deny that he approved the board's action. We'll be glad to publish his denial in this same space.

And the same goes for Hr. Hinn who, as a flour manufacturer, also cannot afford to incur ill will of the people.

And there is something else that bears watching. Most of our readers are aware that Lubbock is served by two electrical systems. The city of Lubbock operates its powerplant, just as does Tulia, and Southwestern Public Service also serves Lubbock. The two systems are highly competitive. Both would like to have all the customers they can get.

In the past, Texas Tech, which must use a tremendous amount of electricity, has patronized the city of Lubbock.

There is a rumor in circulation that the possibility of switching to the big utilities company has been mentioned.

Should such a switch be made, it is inevitable that many will see a connection between the switch and the appointment of a utilities man to the board of regents.

We're making no accusations.

We're just sitting on the sidelines with a wary eye on events as they happen. We hope that Mr. Wall will publicly fight any effort to switch from the city of Lubbock so as to avoid even the appearance of evil.

Despite the fact that the regents are Shivers-Daniels appointees, we refuse to believe that their recent action is indicative of their character. We believe that they are better men than they appear to be. We believe that unfortunate things sometimes happen in board meetings as a result of many things.

Sometimes the less aggressive members of a board are guilty of letting a determined minority run things, they won't speak up, they follow the course of least resistance.

Sometimes good men make an honest mistake. All men are frail. None is incapable of poor judgment.

But it must also be added that good men, when they realize their error, will correct it. Good men's pride is not wounded when they come forth with honesty and frankness and admit that they acted in haste, that they failed to give the issue as much consideration as it deserved.

The public will admire them for it. The public loves humility and readiness to admit a mistake. The public despises the bullheaded official who, even though he secretly knows he is wrong, is not big enough to admit it—chocsing instead to be despotic and arbitrary.

We have no doubt but what some men on the Tech board regret their unfair action. There just must be some good men on the board.

But will they admit their mistake?

We doubt it.

Veto of Salary-Raise Bills

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. WEAVER. Mr. Speaker, I submit herewith two editorials concerning the salary-raise bills recently voted for our postal and civil-service employees and which were pocket-vetoed by the President. One is from the Washington, (D. C.) News and the other is from the Youngstown (Ohio) Vindicator. Both of them express in a general way my thinking on this matter. I certainly trust that the Congress next year will approach this subject in a realistic manner and pass legislation which will have the prior approval of the administration so that it can be enacted into law. Then these deserving employees of our Government will receive a salary increase that is fair and reasonable and one that will be consistent with their individual responsibilities.

The article follows:

[From the Washington Daily News]

CRUEL TRICK

The pay-raise maneuver was a cruel trick on 1,500,000 Federal employees who, like other people, are troubled by the high cost of living.

The bills were passed by Congress in full knowledge they would be vetoed by the President. They were passed so late in the session that Congress spared itself the embarrassment of overriding the veto.

President Eisenhower's objections to the bills were valid. As written they would have emphasized existing distortions in pay scales, would have required large supplemental appropriations, and might have forced an increase in the $275 billion debt ceiling. As an example of distortion, the flat increases would have been up to 19 percent for least responsible jobs, only 3.5 percent at higher skilled jobs.

The best hope for a reasonable pay raise which would be logical, fair, and discriminating lies in a study being made by a Cabinet committee. This should be ready

for the next session of Congress and should have prompt consideration.

[From the Youngstown (Ohio) Vindicator]

NECESSARY VETOES

President Eisenhower's pocket vetoes of 2 bills which would have raised the pay of more than 1,500,000 postal and civil-service workers had, of course, been expected.

The bills would have meant pay boosts averaging more than 10 percent. Cost to the Government would have exceeded $800 million and probably would have forced another increase in the statutory debt limit.

Furthermore, Mr. Eisenhower pointed out that the proposed raises would have unfairly accentuated existing disparities in the Federal pay scales. The flat increases would have given up to 19 percent raises for least responsible jobs, while employees with greater skills would have received as little as 3.5 percent.

Sponsors of the two bills in Congress, who would have ignored the economic consequences, now will try to reap whatever political capital than can gain out of the vetoes.

The President, however, could hardly have approved such inflationary and ill-advised measures at a time when he has appealed to business and labor alike to negotiate wage adjustments with full regard to the Nation's spiraling living costs. Mr. Eisenhower has taken a wise and fair course; he has promised that if a study which he has ordered of the Federal wage structure shows a need for logical, fair and discriminating salary increases, he will recommend them to Congress next year.

Postal and civil service employees, meanwhile, owe no thanks to Congressmen who voted them a hollow raise in pay, knowing full well that the country's best interests gave the Chief Executive no alternative but to reject the bills.

The Honorable George M. Humphrey: Statesman and Patriot

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. REED. Mr. Speaker, during the period from January 21, 1953, to July 29, 1957, the Honorable George Magoffin Humphrey has rendered to the American people exceptionally outstanding public service.

Mr. George Humphrey took office as Secretary of the Treasury at a time when the fiscal affairs of our Nation had reached a chaotic state. The previous administration had left a Federal debt equal to 89 percent of our annual national income. The previous administration had a planned deficit of $9.4 billion for 1953 and a scheduled deficit of almost $10 billion for 1954. Inflation was unrestrained and had reduced the purchasing power of the dollar from 100 cents in 1939 to 72 cents by 1945 and to 52 cents by 1952. With the advent of the Republican administration in January 1953 and under the aegis of George M. Humphrey as Secretary of the Treasury, deficit financing was first sharply reduced and then entirely eliminated. The budget was balanced for the years 1956 through 1958 which represented the first time since the years 1929 through 1931 that our Nation had had three successive balanced budgets. Federal expenditures were substantially reduced during the time that Secretary Humphrey was in office. This fiscal solvency was achieved despite the granting to the American people of the greatest tax reduction in the history of our Nation—an annual tax saving of approximately $8 billion. These objectives were primarily accomplished during the time that a Republican administration was working with a Republican Congress and I am privileged to say during the time that I was honored to serve as chairman of the Committee on Ways and Means.

The responsible management of our national finances under George M. Humphrey had a far-reaching effect and inspired previously unequaled economic growth in the United States. During the 4½ years Secretary Humphrey held office, employment increased in the United States by almost 4 million jobs so that an average of 65 million of our people were gainfully employed. In the same period average annual family income increased from less than $4,600 to an estimated $5,200. The insidious inflation was substantially retarded so that the cost of living rose an average of only six-tenths of 1 percent per year during his tenure in office as compared with an average increase at the rate of about 7 percent per year for the preceding 13 years. The personal financial security of our American families was markedly enhanced, and business assumed an unprecedented volume of investment in new plant and equipment.

Secretary Humphrey would be the first to acknowledge that considerably more progress must be promptly achieved in reducing Federal expenditures, taxes, and public indebtedness. I am confident that his successor, the Honorable Robert B. Anderson, will prove unrelenting in his endeavors to further the policies of his distinguished predecessor in office. This recitation of facts and statistics establishing the economic well-being and growth of America in the period of Mr. Humphrey's public service could be greatly expanded. A large measure of responsibility for this growth must be attributed to the fiscal policies established by, and the fiscal integrity exemplified by, George Humphrey.

The fiscal policies instituted and pursued by our National Government during Secretary Humphrey's tenure in office diverted us from the path of an encroaching Federal bureaucracy with its inevitable culmination in state socialism and restored us to the traditional American path of free enterprise and individual initiative. It has been free enterprise and individual initiative that have given to America our present-day greatness, and George Humphrey was properly convinced that America's even greater future lay in the same economic philosophy.

After rendering distinguished and selfless public service George Humphrey resigned his position of public trust and returned to private life. Every American citizen has personally benefitted from the fact that George M. Humphrey has served as the Secretary of the Treasury.

At the time of his leaving public office the Republican members of the House Committee on Ways and Means joined in signing a letter addressed to Secretary Humphrey expressing their appreciation for the privilege of being associated with him. Mr. Speaker, I will at this time make that letter a part of my remarks at this place in the RECORD:

COMMITTEE ON WAYS AND MEANS,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 29, 1957.

The Honorable GEORGE MAGOFFIN HUMPHREY,
The Secretary of the Treasury.

DEAR MR. SECRETARY: The undersigned Republican members of the House Committee on Ways and Means wholeheartedly join in commending your distinguished public service as Secretary of the Treasury during the period from January 21, 1953, to July 29, 1957.

On the advent of your assuming office, other than the quest for peace, no other problem confronting any Cabinet officer with a more urgent challenge to effective action than the task confronting you with respect to the fiscal affairs of our Nation. To the solution of these problems you brought vast measures of patriotism, integrity, and ability. The outstanding results you accomplished stand as an enduring memorial to your dedication to public service. Without endeavoring to set forth in this letter a recitation of these accomplishments, we are confident American history will record your tenure of office as an outstanding era in our Nation's fiscal affairs.

It is inevitable that the wisdom, foresight, and principle that you have lent to your responsibility will endure as an inspiring example to your successors in office.

Sincerely yours,

DANIEL A. REED, New York; THOMAS A. JENKINS, Ohio; RICHARD M. SIMPSON, Pennsylvania; ROBERT W. KEAN, New Jersey; NOAH M. MASON, Illinois; HAL HOLMES, Washington; JOHN W. BYRNES, Wisconsin; ANTONI N. SADLAK, Connecticut; HOWARD H. BAKER, Tennessee; THOMAS B. CURTIS, Missouri.

Contradiction in Our Society

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. HUMPHREY. Mr. President, one of my constituents in Minneapolis recently sent me newspaper clippings dated 1 day apart.

One of them was from the Minneapolis Morning Tribune of Monday, August 26, and the headline read, "African Student Fined for Failing To Take Rear Seat." The Associated Press dispatch told how an African ministerial student studying in Texas was hit with a policeman's blackjack after he refused to move to the rear of the bus.

The second clipping was from the Wall Street Journal of Tuesday, August 27. The headline read: "Accent on Africa—

United States Steps Up Efforts To Win Friends."

Mr. President, these two headlines serve to point up a contradiction in our society. It is the contradiction between all that we want the world to think we are, and all that we are doing to destroy that image. This contradiction is causing us untold embarrassment in the conduct of our foreign policy and is causing untold sleepless nights for all of us who have any conscience about the problem at all.

Mr. President, I heartily endorse everything that my constituent's letter says, and I feel that it represents the basic goodness and generosity of most of the people of this land. How long this basic contradiction between our pretenses and our practice remains will in the last analysis depend on each and every one of us.

I ask unanimous consent that the two clippings as well as the letter from my constituent be printed in the Appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the Minneapolis Morning Tribune of August 26, 1957]

AFRICAN STUDENT FINED FOR FAILING TO TAKE REAR SEAT

HENDERSON, TEX.—An African ministerial student hit with a blackjack by a Henderson policeman after he refused to move to the rear of a bus was out of jail Sunday after a college official paid his fine.

The student, Essin Essin, was fined $25 by City Judge Barto Giles, Saturday after pleading guilty to charges of disturbing the peace and resisting arrest. He was placed in jail because he had only $14 with him.

The 30-year-old Negro was released after an official of Southwestern College, Terrell, TEX., where Essin is a theological student, paid his fine.

Patrolman L. L. Boatright, answering a call from a Continental Trailways driver, said he found Essin sitting in the middle of the bus. He grabbed the student and took him to the back.

"When he reached into his pocket, I had to tap him with a slapjack," Boatright said. Essin said he was reaching for his passport to show the officer.

[From the Wall Street Journal of August 27, 1957]

Accent on Africa—United States steps up efforts to win friends.

AUGUST 28, 1957.

Senator HUBERT HUMPHREY,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR HUMPHREY: The enclosed clippings are of interest. Incidents such as the one described can undo more good than the Government can do in a year in the field of international relations.

In my opinion, if the facts were as stated in the article, the student or the college should be immediately reimbursed by the Federal Government for the amount of the fine and bus fare, and an apology offered.

A scholarship from some college where Mr. Essin would not be insulted and mistreated would show him that towns like Henderson are in the minority in the United States.

If there are millions of dollars available to spend abroad to promote international understanding, if should be possible to find a few to spend at home for the same purpose.

Very truly yours.

Data Covering the 111 Record Votes During the 1st Session of the 85th Congress

---

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, at the conclusion of the 84th Congress I compiled statistics showing the support President Eisenhower's program had been accorded by the members of our two parties in the United States Senate. Once again I have compiled similar data covering the 111 record votes during the 1st session of the 85th Congress. A listing of each rollcall follows my remarks.

They have been divided into four groups. Group 1 lists those rollcalls which did not concern the President's program. Group 2 includes rollcalls where a majority of the Senators from each party voted in support of the President. Group 3 lists the seven instances where a majority of the Republican Senators voting were in opposition to President Eisenhower. Group 4 includes the rollcalls where a majority of the Republican Senators supported the President and a majority of the Democrats opposed him.

A careful review of each issue shows that 81 of the 111 issues were concerned with the President's program. On these 81 issues the Republican support score is 82 percent and the opposition score only 18 percent. The Democratic support score is 56 percent; the opposition score is 44 percent. The 81 issues included treaties and other matters on which there was no recorded opposition.

Twenty-seven rollcalls out of the 81, or 33.3 percent, were on issues on which the 2 parties were divided. A majority of the Republicans supported the President and a majority of the Democrats were recorded in opposition to him. On these 27 issues the Republican support score is 82 percent; the opposition score is 18 percent. What is even more significant, on these issues the Democrats supplied only 22 percent of the support accorded President Eisenhower and 78 percent of all the opposition votes.

On many occasions the President has indicated that he did not want rubberstamp support by Republicans for his program. Republican Senators have discharged their constitutional obligations and have considered each issue on its merits. Nevertheless, the Republicans have supported President Eisenhower on those measures recommended by the President where we were given an opportunity to vote. I say advisedly that there were many issues on which we would have supported the President if we had had an opportunity to do so. Since we are the minority party in this Congress, and the committees are controlled by the Democratic Party, many measures were not reported by committees and placed on the calendar for our consideration.

While our support quite properly has not been unanimous, I find that of the 81 rollcalls there were only 7 on which a majority of the Republicans voting did not support the President's program. Incidentally, on 6 of the 7 issues a majority of the Democrats were also recorded in opposition. Thus, it is clearly apparent that the President needs a Republican Congress if he is to achieve his goals.

On June 13 I took exception to a study by the Congressional Quarterly which attempted to record the support accorded the President by the 2 parties based on 7 Senate rollcalls. I stressed the fact that last year my study, based on the entire record, showed that the President's program had been supported by the Republican Members. I was confident that such a review would again show that the Republican Party, as represented in the Senate of the United States, would supply the main support for the President.

Now that the record is complete, we can all let the chips fall where they may. Eighty-one Eisenhower rollcalls, constituting the entire record, furnishes a fair basis for my evaluation.

In my remarks of July 26 I said:

"The difference between my table and the statements by the Congressional Quarterly lie in the fact that I am willing to submit the entire record, including all of the details, to public scrutiny. I do not expect anyone to accept summary figures because I say they are correct" (p. A6047).

I am, accordingly, again including tables which I prepared covering every recorded vote during the first session of the 85th Congress. They are self-explanatory. Anyone can check and audit my figures.

Republican Senators and the President can take pride in our record.

Classification of all Senate rollcalls, 85th Cong., 1st sess.

Record vote No.	Eisenhower position	Group	Description
1	----------	1	Election of Senator Carl Hayden as President pro tempore of the Senate.
2	----------	1	Johnson motion to table Anderson et al. motions re adopting Senate rules.
3	Y	4	Urgent deficiency appropriations, 1957—Knowland amendment to committee amendment re cottonseed feed. Rejected 49 to 32.

National Economic Policy

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. HUMPHREY. Mr. President, I recently engaged in some correspondence with a constituent of mine which has been most enlightening and helpful. Mr. Evan J. Henry, of Winona, Minn., has provided me with some constructive thinking on monetary and fiscal matters, some of which I believe to deserve wide circulation. Consequently, I ask unanimous consent that a letter from Mr. Henry written to me on July 31, 1957, as well as some additional material which he sent me on August 22, be printed in the Appendix of the RECORD.

Mr. President, it is through such exchanges as these that Senators can reach untapped sources of information in their homes and communities. Mr. Henry's correspondence has been a further indication to me of the immense popular interest in the economic policy of the Government. Mr. Henry himself has a wealth of experience in the field of taxation and fiscal policy, and his views are worthy of attention. As far as I am concerned, it would be an excellent idea if the Government, including the executive agencies, would make a better attempt to seek out grassroots' views even on matters as complicated as that of national economic policy.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

WINONA, MINN., *July 31, 1957.*

Hon. HUBERT H. HUMPHREY,
Senator from Minnesota,
Senate Office Building,
Washington, D.C.

DEAR SENATOR HUMPHREY: Thank you for your letter of July 26. It is very gratifying to know that in this country the opinion of just one citizen is recognized.

The point, of course, that I take issue with the FRB is that the Board's policy of manipulating credit has proved an utter failure in providing sound money. Also, it has failed to provide the answer to inflation. I do agree with the Board, however, that the bubble of credit be constricted rather than expanded, but not by such artificial means as is now applied and that have been so unsuccessful.

As I see it, the real cure for inflation is:

1. Increased production (to meet the needs of an expanding population).

2. Reduction in private debt (to restore consumer solvency).

3. Reduction in national debt (to maintain the value of the dollar).

In only one of these categories (reduction in national debt) has the Eisenhower administration made any progress, and then only superficially. Actually, what reduction has been made in the national debt has been made possible only through an increased gross national product created from further expansion of private debt. For while reducing national debt $6 billion private debt expanded $32 billion, as is shown from statistics quoted from Department of Commerce's Survey of Current Business:

Comparative summary of public and private debt [1]

	1955	1956	Increase (decrease)
Total net Government and private debt	657.7	683.8	26.1
Less net Government debt	231.5	225.4	(6.1)
Private debt	426.2	458.4	32.2

[1] As of Dec. 31 in billions of dollars.

With kindest regards and my sincere thanks for bringing this matter to the attention of other Congressmen, I remain,

Sincerely yours,

EVAN J. HENRY.

WHERE THERE IS OR SHOULD BE GENERAL AGREEMENT

To merely increase the money supply with more paper credit of one form or another is to deflate the monetary value thereby causing a corresponding rise in prices. This, I understand, is quite generally accepted and few responsible Congressmen would suggest the restoration of credit supply by fictitious creation of watered stock money. It also seems evident that the Federal Reserve Board has accurately represented the situation when it maintains that the demand for incurring of debt far exceeds the supply of available credit and that rationing of credit is necessary until the supply can be restored. With 458.4 billions in private debt outstanding as of December 31, 1956, and expanding more and more, it is or should be the desire of all to halt the trend and possible reverse it. So far, I believe, there is quite general agreement. A difference develops, however, in the manner and effect of the Board's method of rationing and of its opinion as to how best the supply may be restored.

THE EFFECT OF FRB'S RATIONING

Originally the restrictive credit policy of the Federal Reserve Board was adopted with the intent of influencing the tempo of the economy. It was to be a tranquilizer to the highs and a stimulant to the lows. Thus, when the first signs of inflation occurred after its adoption, the so-called credit brakes were applied by raising discount interest rates and reserve requirements throughout the country. However, as inflation persisted and private debt continue to increase, discount rates were again raised. Yet inflation persisted and finally the policy of intentionally influencing interest rates by Federal Reserve Board was abandoned and disclaimed by both Mr. Humphrey and Mr. Burgess, Mr. Burgess stating before the Senate Finance Committee on July 30, 1957, "The Federal Reserve Board and the Treasury shouldn't deliberately go out and increase interest rates, but natural market forces should be allowed to operate freely." It was a frank admission the policy was not working according to plan.

Quite evidently, it had neither the expected influence on the tempo of the economy nor had it been anti-inflationary; in fact, due to its responsibility for spiraling costs of refunding matured bonds, its failure to effectively restrain the expansion of private credit, and its stagnating effect on the expansion and development of productive capacity and output, it rapidly became evident the Board's method of rationing credit was neither tranquilizing nor anti-inflationary. Indeed quite the opposite.

PRODUCTION OF NATIONAL WEALTH, THE REAL ANSWER

Heretofore, as long as you or I can remember, production and more production has always been considered the real and only answer to inflation. Immediately following the removal of price controls after World War II, goods were in short supply but money and credit supply plentiful. Prices soared but not for long. Soon production closed the gap and prices stabilized. Yet today, by some other reasoning, former Treasury Secretary Humphrey declares it is now fortunate for the economy that some curtailment of capital expenditures has occurred. While population is expanding at about 2 percent a year and creating an ever-increasing demand for goods and services, what manner of logic is this?

Yet, quite understandably, the question might be raised, if inventories are at an all-time high of 52.9 billions [1] indicating an adequate supply of goods and services, how can any curtailment of capital expenditures be inflationary? Or perhaps, to turn it around, if inventories are at an alltime high, how is it the FRB contends the demand for credit has outraced available goods and services?

UNDERCONSUMPTION, NOT OVERPRODUCTION

To both questions there is, I believe, a common answer. Actually the large supply of goods in inventory constitutes instead, a backlog of underconsumption brought about by a long and continuing reduction in consumer solvency [2] that has restrained consumption thereby creating inventory buildup and adversely affecting the production of national wealth through a restriction of commerce. As evidence of this, between 1954–1956, there has occurred a disparity or difference between the increase in consumer debt and the increase in production debt of $13.7 billion * * * indicating thereby that consumers as a whole are and have been falling behind in consumption in relation to production and the incurrment of debt is making up the difference. Thus it seems evident that this disparity difference has caused and continues to intensify the shortage of lendable funds (credit supply) and, despite its intention, the monetary policy of the Federal Government has proven ineffective in restoring the supply. In fact it would appear that debt incurrment is approaching the saturation point unless: (a) Money and credit supply is temporarily and artificially restored by a loose-money policy; or (b) consumption and production debt are brought into closer aline-

[1] As of May 31, 1957 per July issue Survey of Current Business.

[2] Consumer solvency: the ability of consumers as a whole to absorb the country's production currently from income without increasing debt beyond that debt necessary to produce the products consumed.

ment, thereby restoring consumer solvency.[1] In my opinion the latter course offers the only real cure to inflation. If neither action is instigated, this free economy, I fear, may undergo a serious change.

Thus, in my opinion, the real and only cure for inflation is, (a) national solvency, that is, a balanced budget and a reduction of national debt (so as to maintain the value of the dollar in terms of what it will buy), (b) individual or consumer solvency as defined herein and brought about by specific credit controls on all purchases where credit is necessary to the sale and by an increase in purchasing power.

National and individual solvency, I believe, are the only real cures to inflation and economic stability.

Presently, to my knowledge, no plan exists to control inflation save President Eisenhower's threat to impose wage and price controls should inflation persist. I submit that it is imperative a plan be developed at the earliest possible moment and respectfully suggest the foregoing for your consideration.

Respectfully yours,

EVAN J. HENRY.

Increases between Jan. 1–Dec. 31

	1954	1955	1956	Total
Consumption debt increases:				
Home mortgages	10.9	14.1	12.9	37.9

[1] Reduction in consumer solvency as evidenced by increase in consumption debt over increase in production debt:

Record of the Committee on Ways and Means in the 1st Session of the 85th Congress

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. REED. Mr. Speaker, the distinguished chairman and the entire membership of the Committee on Ways and Means are to be congratulated on their devotion to duty and on the performance of their responsibilities as members of the committee and as Members of the House of Representatives during the 1st session of the 85th Congress. I would particularly like to extend my congratulations to my esteemed friend and chairman, the gentleman from Tennessee, the Honorable JERE COOPER, for his wise guidance and leadership as chairman of our great committee.

Mr. Speaker, unfortunately the record of the Ways and Means Committee for achievement during this session of Congress has not been matched or anywhere near approached elsewhere in the Congress of the United States. Much of the legislation on which favorable committee action was taken failed to receive the consideration it deserved in the House of Representatives or in the Senate.

This breakdown in the legislative process must be attributed to a failure of the Democrat majority in the Congress to provide the essential guidance and leadership that is so necessary to the accomplishment of an effective legislative program. Such a legislative failure is perhaps inevitable with the Democrat Party in the majority; a party that is sharply divided on legislative issues involving civil rights, a strengthened farm program, and the development of natural resources; a party that is composed of the traditional spenders in Congress who now for political purposes give brazen lipservice to being the proponents of Government economy, while at the same time irresponsibly urging the enactment of legislation to create an ever bigger Federal bureaucracy. The cleavage in the Democrat ranks is made apparent by an examination of the issues and the record. The Democrat from Boston cannot agree with the Democrat from Atlanta on the issue of civil rights. The Democrat from Detroit cannot agree with the Democrat from Nashville on the issue of public power. The Democrat from New York City cannot agree with the Democrat from Minneapolis on the essentials of an effective farm program. Mr. Speaker, the national issues on which the Democrat Party is divided could be enumerated ad infinitum.

Because of this Democrat intraparty strife and division it is little wonder that the 1st session of the 85th Congress was characterized by a breakdown in Democrat leadership and failure of achievement.

This absence of general accomplishment in the 85th Congress to date causes be to be particularly gratified to be able to report achievement by the Committee on Ways and Means during this period.

In the 85th Congress, 1st session, the Committee on Ways and Means had referred to it a total of 1,517 bills and 20 resolutions. The committee reported 50 bills to the House of Representatives of which 43 were passed by the House. Twenty-two of these bills were favorably reported by the Senate Finance Committee and 21 bills passed the Senate. Since the convening of the 85th Congress the full committee held 8 days of public hearings and received testimony from 119 witnesses. The committee also met 61 times in executive session. In addition the subcommittees of the committee have been active within the areas of their respective jurisdictions.

The legislation acted on by the committee included subject matter covering virtually every major subject within the committee's jurisdiction. With one exception no major legislation on which the committee acted completed the legislative course to become public law. In this connection the committee prepared and reported to the House of Representatives two major tax bills. One of these bills, the Excise Tax Technical changes in our Federal excise-tax strucported by the Committee on Ways and Means on May 24 and passed the House on June 20. Despite the fact that this legislation contained many beneficial changes in our Federal excise-tax structure, the Senate took no action on the legislation. The other somewhat major tax bill was H. R. 8381, the Technical Amendments Act of 1957, to provide significant changes in the income, estate and gift tax provisions of the Internal Revenue Code. This legislation was favorably reported by the committee on July 9, but the Democrat House leadership failed to schedule it for floor consideration in the House of Representatives. The remaining tax bills were of a somewhat minor nature with the exception of H. R. 4090 which provided for a 1-year extension of existing corporate and certain excise-tax rates and which became Public Law 12.

On the subject of tariff and customs legislation, the most significant bill on which action was taken was H. R. 6006 relating to the Antidumping Act of 1921. This legislation which was originally recommended by the Department of the Treasury would make important improvements in the antidumping law to provide more effectively for the enforcement and administration of the act. This bill did not pass the House of Representatives until August 29 so that it was not possible for the Senate to consider the legislation in time for it to become public law this year.

Minor but important changes were made in the Social Security Act including the extension of a coverage option to policemen and firemen in my State of New York and certain other designated States as well as a change in the law so that veterans sustaining a service-connected disability would not be deprived of their benefits under the disability provisions of the old-age and survivors insurance program by virtue of their receiving another Federal disability pension. In addition the coverage option avalable to ministers under the OASI program was liberalized.

Mr. Speaker, it is regrettable that the list of meritorious legislation that did not become public law is longer than the list of such legislation that was enacted into law. On August 16, 1956, the Republican members of the Committee on Ways and Means called upon the Democrat leadership to promptly enact certain legislation vitally affecting the citizens of our Nation. None of this legislation was enacted into law to the consequent detriment of our citizens.

The first legislative proposal that the Republican Members urged be favorably considered by the Congress pertained to the tariff protection accorded our domestic lead-zinc industry. This legislation would have imposed a sliding scale import tax on lead and zinc imports. Hearings were held by the Committee on Ways and Means but no further legislative action was taken or scheduled by the Democratic majority.

The second legislative matter on which the Republican committee membership urged prompt action on August 16, 1957, pertained to amendments to the Antidumping Act, and I have already described the disposition of that meritorious legislation taken late in the 1st session of the 85th Congress.

The third legislative matter on which

the Republican Members concurred in urging prompt actio pertained to proposed tax reforms for small business. These tax recommendations constituted a minimum legislative program to improve the applicability of our Federal tax structure to small business. These changes were derived from recommendations made by the President of the United States in a letter to the chairman of the House Committee on Ways and Means dated July 15, 1957. These recommendations are as follows: First, purchasers of used property not exceeding $50,000 in any 1 year should receive the same liberalized depreciation that was made available to purchasers of new property by the Internal Revenue Code of 1954; second, corporations with 10 or fewer stockholders should be given the option of being taxed as a partnership; third, the payment of estate taxes should be allowed in installments over a period of up to 10 years in cases where the estate consists largely of investments in closely held business concerns; and, fourth, an original investor in a small business should be allowed to deduct from income up to some maximum amount prescribed by Congress any loss realized on a stock investment in such business. These tax recommendations were noncontroversial and would have been of significant benefit to our small business community. To the list of unfinished legislative business must be added proposals to extend unemployment compensation coverage to ex-servicemen, to further simplify customs administration, to simplify OASI reporting, and several other important legislative matters.

Mr. Speaker, if in this review of the record of the Committee on Ways and Means in the 1st session of the 85th Congress, I have dealt at greater length with the failure of the Democratic leadership in the Congress than I have with the record of accomplishment achieved by the Ways and Means Committee, it is because of my conviction that despite the best efforts of any legislative committee, such efforts will be for nought in the absence of effective leadership in our two great legislative Chambers. It is essential, if the 2d session of the 85th Congress is not to duplicate the failure of the first session, that the Democratic leadership cast aside political motivations and machinations and work conscientiously for the strengthening of our Nation and the improvement in the well-being of our citizens.

Mr. Speaker, it is my fervent hope that the reconvening of the 85th Congress next January will mark the beginning of a session that will find such productive accomplishment realized.

Continuing Policy on Antarctic Sought

EXTENSION OF REMARKS

OF

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the following article from the Christian Science Monitor of August 12, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEVERAL BILLS PUSHED—CONTINUING POLICY ON ANTARCTIC SOUGHT

(By Herbert B. Nichols)

WASHINGTON.—Hopes are riding high for passage of enabling legislation establishing an official commission "to spearhead a continuing Antarctic policy in the Government of the United States."

With several similar bills introduced before both Houses of Congress in the current session, the one most favored was introduced by Senator ALEXANDER WILEY, Republican, of Wisconsin, and 22 cosponsors.

This bill provides: A depository of Antarctic information. A director and two deputies (assisted by a revolving counsel of 12 "eminently qualified members"). It will assist and advise in establishment of territorial claims for the United States in the Antarctic.

It will aid in matters of national defense; publishing scientific, technical, historical, and general information about the white continent; and conduct the Commission's own housekeeping tasks—all within the executive branch of the Government.

When introduced on May 30, Senate Majority Leader LYNDON B. JOHNSON, Democrat, of Texas, placed it in the category of a bipartisan proposal.

SUCCESSOR TO BYRD

A similar bill has been introduced in the House of Representatives by Representative CLAIR ENGLE, Democrat, of California. At a hearing held before the House Committee on Interior and Insular Affairs August 7, Mr. ENGLE presiding, Adm. George J. Dufek appeared before the committee of 23 of 25 committee members on invitation from the chairman.

Following in footsteps of the late Admiral Byrd, Admiral Dufek has recently been designated to succeed the famed explorer-flier as United States Antarctic projects officer, advising on political, scientific, and legislative activities while serving also as commander of United States naval forces in the Antarctic.

Under Admiral Dufek's direction the extensive work of establishing 7 Antarctic stations, 5 in connection with United States participation in the International Geophysical Year, has been accomplished.

QUESTIONS VARY

Dr. James F. Mooney, who accompanied Admiral Dufek, was formerly president of the University of Tampa and author and lifelong friend and confidential adviser to Admiral Byrd, has borne much of the burden of drafting pending legislation for establishment of the Commission.

Questions put to the admiral ran all the way from "How cold is it down there?" and "How thick is the ice on which you unload all those tons of supplies," to intimate details of Navy procedure and the inevitable "How about United States territorial claims in the Antarctic?"

"Mighty Casey"

EXTENSION OF REMARKS

OF

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 20, 1957

Mr. WEAVER. Mr. Speaker, the great American game of baseball is about to come to an end for another season. How thrilling it has been for Americans of all ages and what a wholesome sport it is for the youth of our country to teach them the principles of good sportsmanship. I am happy to insert for the RECORD a news item from the Washington Daily News of August 19, 1957, written by Henry Fankhauser about one of baseball's greats, "Mighty Casey," and an appropriate tribute to his wife as a "living baseball legend."

The article follows:

MRS. CASEY, TOO, IS A LIVING BASEBALL LEGEND

(By Henry Fankhouser)

Tomorrow 70 years ago a memorable event rocked baseball—"Mighty Casey" struck out.

It set the stage for the famous baseball poem, Casey at the Bat.

Wednesday Casey's widow, Mrs. Daniel Maurice Casey, will celebrate her 94th birthday. She lives alone in a small 3-room first-floor apartment at 403 Clayborn Avenue, Takoma Park, Md.

Mrs. Casey is extremely alert for her age. She remembers distinctly that day her husband made history. It was in Philadelphia in 1887. She remembers their good friend, Poet Ernest Lawrence Thayer, talking to her husband. Dan later told her Mr. Thayer was going to write a poem about him.

"Baseball did more harm than good to Dan, though," she recalls. "Pitching so much hurt his arm. I was never much interested in the game," the tiny, talkative little old lady added.

Her peak in sports was croquet. She admits though, that she was a pretty fair horsewoman back on her dad's farm in Binghamton, N. Y.

Painting is her specialty. Mrs. Casey is another "Grandma Moses." She's still creating and selling beautiful oils. Been doing it since she was 15. And she's an architect, too. Drew plans for several spacious homes near Colesville after moving to this area 30 years ago to be nearer her daughter and grandson.

"Mr. Casey was a hitter before he became a pitcher," Mrs. Casey explains. His performance that big day in 1887, before his immortal strike out, proved it. His ninth-inning double tied the score at 5–5 for the Phillies against the Giants.

"He was a handsome, sweet boy," she smiled. "When he played in a town he thought I'd enjoy, he'd always take me along. We stayed at the best hotels, too. I was the luckiest girl in my crowd."

Casey was a husky 6-foot, 200-pounder. Mrs. Casey is a small lady, 5 feet tall, and "Just say I weigh 100."

"Worry is the worst disease anyone can contract," she explains. "I trust my luck. If I can't get things done today, there's always a tomorrow." She has had 94 years of tomorrows to prove it.

Mrs. Casey has never been a patient in a hospital. "Haven't had time." She gave birth to her daughter at home. It's been 6 years since she's seen a doctor. "He charged me $10. I swore I'd never see another one." Dan never worried, either. "He never came home discouraged or talked baseball," Mrs. Casey recalls. His only illness finally took his life in 1943. Mrs. Casey doesn't recall what it was; she didn't bother to find out, but stayed at his bedside at Washington hospitals for 7 long months.

Casey was a powerful pitcher. Won 29 games in 1887 and 26 in 1886. He pitched for the Phillies four seasons. He won 99 games in pro ball and lost 91.

Casey's the only ballplayer to make the Hall of Fame at Cooperstown, N. Y., by striking out. A copy of the immortal Casey at the Bat is in a prominent spot on the east wall upstairs. It's autographed by the author. A large color painting of Casey is directly above.

Binghamton, Casey's hometown, gave him a day in 1915.

Wednesday will be Mrs. Casey's day. She's a living baseball legend.

Record of Votes in the 1st Session of the 85th Congress

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, the Congressional Quarterly of August 2 once again published a misleading report. It gives the impression that Democratic Members of the Senate were more concerned with economy than the Republicans. While the economy-support score was 33 percent for each party, the opposition score was 52 percent for the Republicans and 50 percent for the Democrats.

The Congressional Quarterly study was based on their selected group of issues, which they claim reflect the attitude of Senators on economy. It did not include many issues which were of great significance. For example, just prior to completion of this study the Senate had voted for the Hells Canyon program. This vote was not included in the group of issues reflecting attitudes on Government economy, yet it is difficult for me to conceive of a single rollcall which was more important in terms of committing the taxpayers to unnecessary expense.

Now that the record of the 1st session of the 85th Congress has been completed, I have reviewed the 111 record votes. There were 38 such rollcalls which directly or indirectly affect the expenditure of public funds.

Immediately following these remarks I have listed these issues and the position which represents a vote in favor of economy. My study shows that 63.7 percent of the economy votes were supplied by Republicans. Only 36.3 percent were supplied by the Democrats. On the other hand 62.3 percent of the votes in favor of increased spending were cast by the Democrats, and only 37.7 percent by the Republicans. Once again the whole record completely refutes the Congressional Quarterly study.

A study of these issues clearly shows that the Republican Party has made every effort to reduce Government spending consistent with our platform pledges. We know that needed tax reduction can only result from our continued efforts to reduce the cost of Federal Government programs.

List of record votes involving economy in Government

Record vote No.	Vote for economy position	Description
3	Y	Urgent deficiency appropriations, 1957—Knowland amendment to committee amendment re cottonseed feed. Rejected 49 to 32.
4	N	Urgent deficiency appropriations, 1957—Hayden amendment re $30,000,000 for strategic minerals. Passed 64 to 17.
15	Y	River and Harbor Flood Control Act of 1957—Hruska motion to recommit. Rejected 55 to 27.
16	N	River and Harbor and Flood Control Act of 1957—Passage. Passed 42 to 22.
24	Y	Appropriations for State, Justice, the Judiciary, and related agencies, 1958—Committee amendments re funds for U. S. Information Agency. Passed 61 to 15.
26	N	3d supplemental appropriation bill for fiscal 1957—Hayden amendment re additional amount of $30,000,000 for acquisition of strategic materials. Passed 61 to 17.
27	Y	3d supplemental appropriation bill for fiscal 1957—Williams amendment re 25 percent State contribution for emergency feed and seed assistance. Rejected 51 to 27.
29	N	Housing Act of 1957—Gore amendment increasing mortgage-purchasing authority of FNMA by $2,250,000,000; prohibiting discounts; and increasing by $250,000,000 the amount of FNMA preferred stock. Rejected 61 to 17.
30	Y	Housing Act of 1957—Bricker amendments en bloc reducing authorizations in bill by $1,255,900,000 and limiting urban renewal provisions. Passed 67 to 11.
32	N	Housing Act of 1957—Morse amendment increasing annual authorization for public low-rent housing units from 35,000 to 200,000. Rejected 54 to 20.
33	Y	Housing Act of 1957—Bush amendment changing formula for computing interest rates on loans for college housing. Rejected 54 to 16.
34	Y	Housing Act of 1957—Bennett amendment to eliminate committee-proposed increase of the cost of urban renewal projects. Passed 38 to 32.
38	N	Appropriations for the District of Columbia for fiscal 1958—Morse amendment to increase from $20,500,000 to $23,000,000 the Federal payment. Rejected 62 to 23.
39	N	Appropriations for the District of Columbia for fiscal 1958—Morse amendment to increase by $440,250 funds for teaching personnel. Rejected 57 to 28.
42	Y	Appropriations for Agriculture Department and Farm Credit Administration—Russell amendment reducing the annual authorization for the conservation reserve program by $100,000,000. Rejected 52 to 26.
43	Y	Appropriations for Agriculture Department and Farm Credit Administration—Lausche amendment to prevent use of funds re acreage reserve and limit payments to $2,500. Rejected 71 to 7.
47	Y	Mutual Security Act of 1957 (authorization)—Long amendment eliminating defense support authorization. Rejected 55 to 34.
48	Y	Mutual Security Act of 1957 (authorization)—Long amendment reducing defense support appropriations by $90,000,000. Rejected 49 to 40.
49	Y	Mutual Security Act of 1957 (authorization)—Ellender amendment reducing authorized ceiling on military assistance by $500,000,000. Rejected 61 to 26.
50	Y	Mutual Security Act of 1957 (authorization)—Long amendment reducing military assistance authorization by $100,000,000. Rejected 52 to 33.
51	Y	Mutual Security Act of 1957 (authorization)—Morse and O'Mahoney amendment eliminating development loan authorizations. Rejected 54 to 32.
52	Y	Mutual Security Act of 1957 (authorization)—Morse amendment reducing President's discretionary authorization by $150,000,000 plus notice. Rejected 61 to 22.
59	N	Hells Canyon Dam, authorizing construction of—Passage. Passed 45 to 38.
63	Y	Defense Department Appropriations, 1958—Douglas amendment re cut of $971,000,000, but providing $500,000,000 for additional combat units. Rejected 65 to 7.
64	Y	Defense Department Appropriations, 1958—Dworshak amendment re cut of $182,000,000. Rejected 49 to 24.
86	Y	Authority for TVA to issue revenue bonds—Goldwater motion to recommit to Committee on Public Works. Rejected 63 to 22.
87	Y	Authority for TVA to issue revenue bonds—Saltonstall amendment providing congressional approval. Rejected 46 to 37.
88	Y	Authority for TVA to issue revenue bonds—Case of South Dakota amendment requiring a repayment of $10,000,000 annually by TVA to the U. S. Treasury to be applied to the reduction of the appropriation investment. Adopted 76 to 6.
89	N	Authority for TVA to issue revenue bonds—Passage. Passed 61 to 20.
90	Y	Retirement benefits for District of Columbia employees—Williams motion to recommit bill to committee. Rejected 47 to 19.
91	Y	Retirement benefits for District of Columbia employees—Williams motion to recommit bill to committee with instructions to bring retirement benefits in line with those of other employees holding hazardous jobs under the civil-service retirement system. Rejected 32 to 30.
92	N	Retirement benefits for District of Columbia employees—Passage. Passed 45 to 19.
93	N	Government guaranty of private loans to air carriers—Passage. Passed 72 to 9.
97	Y	Appropriations for Atomic Energy Commission—Dworshak substitute amendment eliminating project 58-e-14 to authorize $500,000 for study and design work for project 58-e-14, natural uranium power reactor prototype. Rejected 40 to 37.
98	Y	Appropriations for Atomic Energy Commission—Hickenlooper amendment to eliminate authorization for $40,000,000 for natural uranium power reactor prototype (project 58-e-14) and $15,000,000 for plutonium recycle experimental reactor (project 58-e-15). Rejected 42 to 34.
99	Y	Appropriations for Atomic Energy Commission—Hickenlooper substitute amendment to strike out mandatory requirement that Commission contract directly with equipment manufacturers for construction of reactor plant, and with cooperative or public organization for operation of plant and sale of steam; and substitute therefor provision for discretionary power in Commission to contract directly with either supplier or cooperative. Rejected 42 to 34.
104	N	Mutual security appropriations, 1958—Foreign Relations Committee amendment increasing military assistance from $1,250,000,000 to $1,475,000,000. Passed 59 to 28.
106	N	Postal pay increase. Passage. Passed 69 to 17.
107	N	Civil service pay increase. Passage. Passed 64 to 22.

Protecting the Public Purse

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. KENNEDY. Mr. President, one of the most pressing problems which faces Congress year in and year out is the need for protecting the public purse. It is especially imperative in this age of international uncertainty and huge defense outlays that Congress squeeze out every possible drop of waste in Federal spending. Our high tax levels cut into the living standards of virtually every income group and reduce economic incentives to produce for a more abundant America.

Excessive expenditures burden the national economy and make the control of inflation exceedingly difficult. Indeed, if the past 3 years are any indication, Government spending has helped to boost the price level far beyond what it should be, resulting in great hardships among the aged, veterans, schoolteachers, and others who live on relatively fixed incomes.

With the headache of Government economy always before us, I was especially impressed with the thesis advanced by Robert A. Wallace in his doctoral dissertation which he wrote for the University of Chicago. Dr. Wallace maintains that Congress needs better information before it in order to do a more effective job of controlling Federal expenditures. He has considered the nature of the appropriations process and analyzed proposals to improve it. He advocates using the General Accounting Office to make expenditures analyses on a continuing basis as the best proposal to help Congress.

I have worked with Bob Wallace on various occasions and have found him extremely capable. He took his Ph. D. degree in political science at the University of Chicago and taught that subject at the Illinois Institute of Technology.

In 1949, Dr. Wallace came to Washington with Senator PAUL H. DOUGLAS, of Illinois. In my judgment, he has proved himself one of the best staff men on Capitol Hill, first as Senator DOUGLAS' assistant, and then as staff director of the Senate Banking and Currency Committee. Therefore, I believe we in Congress should carefully consider his study.

Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a summary of Dr. Wallace's expenditures study.

There being no objection, the summary was ordered printed, as follows:

PROTECTING THE PUBLIC PURSE

(By Robert A. Wallace, staff director, United States Senate Banking and Currency Committee)

I. THE IMPACT OF FEDERAL SPENDING

The degree of congressional power vis-a-vis the President ebbs and flows with the particular periods and personalities. Nevertheless, Congress has managed through the years to maintain its most constantly exercised and consistently important power, the constitutional right to pass judgment on all money matters. Through the spending prerogative, Congress shoulders the formidable responsibility of deciding the volume, range, and direction of each Federal program. Every citizen feels the effect of these decisions, not only through the operation of national programs, but also by the impact of spending levels on the national economy and the amount of money siphoned out of his pockets in the form of taxes.

Both the Senate and the House of Representatives devote a vast amount of time to the exercise of the spending power. Dr. George Galloway, one of the leading authorities on Congress, estimates that "perhaps nine-tenths of the work of Congress is concerned, directly or indirectly, with the spending of public money."[1] Federal expenditures, then, have a tremendous effect on all national programs, a direct consequence on the average citizen's take-home pay, and a substantial impact on the national economy as a whole. The exercise of the spending power thus looms as a function of Congress requiring the most careful study and analysis.

The Federal spending process begins with the background of authorizing legislation on the statute books. It then proceeds through four phases: (1) Budget preparation, (2) budget authorization, (3) budget execution, and (4) budget review. Budget preparation and execution belong exclusively to the executive branch of the Government, although both interlock with the congressional functions of budget authorization and review. Scholarly treatises and Government reports have dealt with all four phases of the budgetary process, but currently, the most vexing problems appear to arise during the period of budget authorization—the time of congressional consideration and enactment of appropriations measures.

II. THE NEED FOR BETTER CONTROL

The Congress of the United States simply does not, at present, have access to sufficient analytical data to exercise fiscal control. Instead, such control is necessarily held in the hands of those who possess detailed information with respect to the various administrative needs and the adequacy of this or that amount of money for carrying out a particular program. This does not mean that the President, rather than Congress, really controls expenditures by virtue of his position as chief administrative officer of the entire executive branch. The President theoretically makes the final decisions on the estimates of financial needs, a process that stretches from unit chief to Cabinet officer. Yet, like Congress, he must often rely on 20th-hand information.[2]

Even the Bureau of the Budget, which can acquire more information on programs for expenditures than any other governmental body and comes closest of all to having financial control, does not have sufficient staff to assemble and analyze the detailed data necessary to exert such controls.[3] There is no central point of control of expenditures except in terms of lump sums; rather the determination of expenditures is highly decentralized, resting with the myriad of administrative units.

Over 2,000 component units of Government nestle in the vast reaches of the executive branch, and 2½ million civilian employees stream in and out of Government offices—the Federal Establishment maintains nearly 6 million on its payroll if we include members of the Armed Forces. At work in this gargantuan, intricate maze of governmental units and employees are all kinds of centrifugal forces, divided loyalties, and crisscrossing of authority. Lines of responsibility run upward to the President, sideways to Congress, and crabwise to economic interest groups. Dr. Ernest Griffith, Director of the Legislative Reference Service of the Library of Congress, labels the result of these diverse forces "Government by whirlpools,"[4] which cause dispersive legislation, dispersive administration, and, in toto, a dispersive state. Another student of Congress, James M. Burns, declares that policy and administrative responsibilities are shrouded in a fantastically complicated network of ever-shifting relationships among President, administrators, staff agencies, Senate, House of Representatives, committees, subcommittees, chairman, individual legislators, and among infinite combinations and permutations thereof.[5]

The problem facing Congress is basically one of securing adequate information and analytical data. More adequate information and interpretive materials would permit a factual approach to efforts to achieve economy rather than such techniques as meat-ax methods and hamstringing restrictions on the administrative agencies. In short, we ought to let Congress exercise its spending prerogative with as much understanding as possible.

III. PATHWAYS AND PITFALLS

The congressional difficulties in assessing money issues begin during the formulation of the Federal budget, prepared exclusively by the executive branch of the Government, which tends to work in behalf of the agency interests. After the President presents the budget to Congress, the agencies and the Bureau of the Budget maintain the fiction that all estimates are equally sound. It becomes the President's budget and agency and Bureau representatives will explain it only in a context of justification. Criticism by these officials of any of its features would be construed as an attack on the President's

Footnotes at end of speech.

Footnotes at end of speech.

ogram. Thus, Congress cannot rely on ency personnel for objective commentary the executive requests.

The focal point of the congressional power er the purse lies within the appropriations bcommittees, which take first crack at the dget estimates. Both the full committee d the full membership may alter the recmmendations of the subcommittees, but ese tight-knit little groups wield a tredendous influence, since they shoulder the rden of item-by-item scrutiny of the bills. he subcommittees hold hearings, study the ems with the staff, and mark up the bills r submission to the full committee. The ct that the subcommittee members labor r weeks and possibly months on an appro riations measure virtually precludes oppotion to their recommendations except on road policy matters. Moreover, barring parsan splits or uncompromisable differences f opinion, subcommittee members will reach greements on all items and act as a unit efore the full committee. On the same asis, the full committee will present a nited front before the full membership of he House or Senate.

In the Senate, seniority settles the quesion of who fills subcommittee vacancies—embers with the longest service on the ommittee get first choice. In the House, owever, the committee chairman allocates he subcommittee membership of the maority party and the ranking minority mem er determines the minority party membership. This difference in the assignments to ubcommittees accounts for a marked difference in the makeup of House subcommittees compared with that in the Senate. Those who serve on the House subcommittees represent regions that have little stake in the appropriations under their subcommittee's jurisdiction, and subcommittee members do not quaver at the thought of substantial reductions. The opposite is true of the Senate subcommittees. Since these are filled according to individual choice backed up by sufficient seniority, members of the Senate Appropriations Committee will seek to serve on subcommittees which consider funds important to their States. Consequently, they tend to seek increases and certainly to oppose cuts in programs dear to the hearts of their constituents. Moreover, seeking reductions, even in programs not affecting their districts, would mitigate against their chances of securing the appropriations they want.

Subcommittee hearings develop information about particular expenditures and programs, but the witnesses almost invariably represent agencies defending the budget requests or individuals and pressure groups demanding larger expenditures. For example, House subcommittee hearings on the civil functions of the Army appropriations bill (rivers and harbors, and flood control) in 1952 consisted of two volumes. Part 1 contained about 500 pages of testimony of Army representatives exclusively. It took another 910 page volume to hold all the testimony of 110 Members of Congress from 35 States and 300 other organizations or individuals who wanted appropriations for rivers and harbors and flood control projects in their areas.[6] While hearings are helpful to Congress and to the subcommitees in gathering information, suggestions for cuts usually face a barrage of arguments gathered by men who have been in constant touch with the budget process, and who have access to those particular facts which will back them up.

When an appropriations bill comes before the full membership for debate, the Appropriations Committee exerts tremendous power. A large number of Members in both Houses of Congress, knowing little of the details of an issue, will side with the committee on all questions. When a Member of Congress, who does not sit on the committee, challenges its recommendations, he often finds himself charged with something akin to insubordination. Moreover, other Members hesitate to vote with him for fear of incurring the wrath of committee members who, perhaps, have wrangled for weeks reaching agreements among themselves. These committee members have little patience with nonmembers who vote to upset tenuous committee compromises on amounts and questions the judgment of the committee.

Although far from perfect, the appropriations process itself presents few really troublesome problems. Nevertheless, reviewing the process points up glaring difficulties which face Members of Congress, especially those who do not serve on Appropriations Committees. The problem of control, having access to sufficient information to take action with knowledge of the consequences, looms large. Witnesses at hearings usually represent agencies or private groups interested only in justifying the budget requests or seeking even higher appropriation. And there is, of necessity, too much reliance on members of the Appropriations Committees which involves the twofold problem of representation of narrow interests and lack of information itself.

IV. REMEDIES FOR BETTER CONTROL

Perhaps the most grossly oversimplified recommendation to help Congress more adequately control spending is to give them a huge staff of budget experts. Congress is not equipped to supervise a large bureaucracy directly and some Congressmen fear losing control of policy by staff getting out of hand. Members must concern themselves with such a broad area of policy that day-to-day supervision of a large research operation would probably fail so miserably that some policies might be furthered by the staff without Members having sufficient understanding of the actions taken in their names.

Staffwise, the Appropriations Committees, and Members of Congress, too, must steer a course between Scylla and Charybdis—between inadequate help and an unwieldy bureaucracy. For this reason, flat recommendations for larger staffs fall short of the mark. Only the Members can decide what is best for them in this regard.

The three major recommendations for improving congressional control of expenditures include: (1) the use of the omnibus, or consolidated appropriations bill, rather than 10 or 12 separate bills, (2) creation of a Joint Congressional Committee on the Budget, and (3) permitting the General Accounting Office to make expenditures analyses on a continuing basis. The item veto, empowering the President to veto parts of an appropriation bill without nullifying the entire measure, has been suggested as an improvement to the appropriations process but it would obviously decrease rather than increase congressional spending control.

A. The omnibus bill

The most prevalent point raised in favor of the omnibus bill is that it allows Congress and the public to view the budgetary picture as a whole. This relates to criticisms that the present process is "piecemeal," that it "breaks up the budget into bits and pieces" and that a consolidated bill would permit an overall comparison of total appropriations with total receipts, making pruning more orderly and less haphazard. This position, however, ignores four pertinent facts: (1) the budget document already gives the overall picture containing both appropriations and expenditures estimates, (2) the consolidated bill cannot give an overall picture because of permanent appropriations and reappropriations, (3) appropriations are not the same as expenditures since they merely authorize expenditures, and (4) the only procedural difference between the omnibus and the separate bill approach is that, under the former, the committee holds up the separate bills until all are ready for reporting. The net effect is to report some 12 bills simultaneously in the form of chapters in a single measure.

In 1950, Congress tried the omnibus bill method of appropriating. This approach was used only once, however, and Congress has not gone back to it.

B. Joint Committee on the Budget

Bills providing for a Joint Congressional Committee on the Budget would create a highly generalized committee which, itself, would be relatively unimportant.[7] The real purpose of the proposals is apparently to create a Joint Committee similar to the Joint Committee on Internal Revenue Taxation, with a staff of 25 or 30 experts to help the Appropriations Committees in their evaluation of budgetary requests. Senator McCLELLAN implied this in his explanation of a bill of this type which he introduced. He declared that the Appropriations Committees were "simply not staffed and equipped to adequately examine the budget."[8]

One of the main difficulties with the Joint Committee proposal is its asumption that better congressional staffing will do the job. This is, at best, an oversimplified recommendation. Staff personnel attached to individual Members and to the committees represent the plane of the smallest diameter in the funnel of information to Congress, but this diameter, once so small as to provide Members with only a trickle of knowledge, has steadily grown since the enactment of the Legislative Reorganization Act of 1946. Many informed persons, including some who serve on congressional staffs, feel that a further general enlargement could possibly result in a funnel mouth so wide as to cause a deluge of information impossible of absorption. The problem here is not one of size, or even quality; rather, the difficulties lie with the quality of knowledge flowing in at the other end of the funnel.

Since it merely provides additional staff assistance for the committees, the Joint Committee on the Budget proposal adds little. If, however, such a staff of experts would help individual Members of Congress who do not sit on the appropriations committees, then the proposal would have substantial merit. For it is primarily the individual Members who lack information on appropriation matters, a factor which increases the power of the committee vis-a-vis Congress as a whole. Still, two problems would arise. First, committee staffs, hired by the committees themselves, are nearly as much responsible to committee members, and especially committee chairmen, as employees of the Bureau of the Budget are responsible to the Budget Director and the President. Second, a staff of 25 or 30 experts would probably fall far short of covering the broad area of expenditures. Yet a larger staff might saddle Congress with a sizable bureaucracy which it cannot manage.

A Joint Committee on the Budget would not do any great harm, might help, but could not possibly approach a substantial solution to congressional needs on appropriation matters.

C. Use of the General Accounting Office

Congress lacks its own Bureau of the Budget as an aid in passing judgment on appropriations, but it does have at its disposal an agency which should possess detailed knowledge about agency spending practices. The General Accounting Office has furnished to Congress extremely helpful information in

Footnotes at end of speech.

Footnotes at end of speech.

this regard. On his own initiative, the Comptroller General has issued numerous reports on financial situations exposed during the regular course of work in the GAO. These, however, have been sporadic and mostly concerned with transactions of questionable legality or practices correctable by legislation rather than amounts of money appropriated or conditions of appropriation. The experience of the GAO and its broad range of activity relating to expenditures have led to opinions in many quarters that Congress should make greater use of that congressional agency in the appropriations process.

As a result of the hearings on the Legislative Reorganization Act in March 1945,[9] and the report of the Joint Committee on the Organization of Congress,[10] section 206 of that act was enacted, providing for expenditure analyses by the Comptroller General. By its terms, the Comptroller General is authorized and directed to make an expenditure analysis of each agency in the executive branch which, in his opinion, will enable Congress to determine whether public funds have been economically and efficiently expended. These reports are to be submitted to the Committees on Government Operations, Appropriations, and to the legislative committees having jurisdiction over legislation relating to the operations of the respective agencies.

The final report of the Joint Committee on the Organization of Congress recommended "that the scope of the work of the General Accounting Office be enlarged to include a service audit of the agencies of Government." Such a service audit was to include reports on the administrative performance and broad operations of the agency, together with information to "enable Congress to determine whether public funds were being carelessly, extravagantly, or loosely administered and spent." [11]

Ten years after its enactment, Congress had not utilized section 206. A 1949 House report stated: "Up to the present time, no appropriation has been made by Congress to the General Accounting Office to carry out this program," [12] and the same situation prevailed through 1956.

V. GAO COULD HELP

A congressional budget office in the GAO could provide accurate data during congressional hearings. It could represent the public interest rather than interests of particular agencies and their friends. While it might influence policy, as it now does with its occasional reports, it should neither determine nor undermine policy. It could, however, provide information necessary for a greater degree of control over the purse by the legislative branch. And every Member of Congress, on an equal basis, should have access to the information developed, with staff of the GAO available to furnish budget details to any Congressman seeking them.

Thus Congress should probably try out section 206 of the Legislative Reorganization Act of 1946. On the one hand, continuing studies of the executive agencies in operation by GAO experts should help members of appropriations committees by giving balance to the programmatic presentations of the executive agencies. On the other hand, making these studies available to all Members of Congress would lessen the power now exercised by members of appropriations committees. Some Members of Congress may be too busy to give detailed consideration and study to GAO information. Nevertheless, the fact that all Members would not use it should not be employed as a justification for denying it to those who would.

With a careful approach, the GAO could become a valuable tool to Congress by the implementation of section 206 of the Legislative Reorganization Act. Expenditures analyses made by the GAO on the basis of broad financial knowledge of Government operations, generally, should enable Congress to take actions on appropriations matters with a greater degree of knowledge about the consequences.

Capitol Commentary

EXTENSION OF REMARKS

OF

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. WEAVER. Mr. Speaker, under permission to extend my remarks, I would like to insert in the CONGRESSIONAL RECORD my Capitol Commentary covering the period January through June 27. I send these reports to my constituents in the First District of Nebraska periodically in an effort to keep them informed of what their Congressman is doing.

The commentary follows:

CAPITOL COMMENTARY (JANUARY 28, 1957)

This is the first in a series of newsletters which will come to you during the 1st and 2d sessions of the 85th Congress. The purpose of Capitol Commentary is the same as any newsletter—to bring to your attention important questions of the day that concern you as citizens and taxpayers. An expression from you on these matters is solicited, welcome, and helpful so that, as your Representative, I will know exactly what your viewpoints are and the consensus of thinking of folks back home. Please feel free to drop me a line at 440, Old House Office Building, Washington 25, D. C. When you finish with this newsletter, pass it on to a friend or acquaintance. If you are not presently receiving it, a card with your name and address is all that is necessary for you or a friend to be added to our mailing list or to correct your present listing. Check your local paper for radio and TV schedules concerning reports from your Congressman in Washington.

THE 85TH CONGRESS

On January 3, 1957, the 85th Congress officially convened and its membership took the solemn oath of office as pronounced by the Speaker of the House, SAM RAYBURN, of Texas. This was the 8th time Mr. RAYBURN has taken the oath as Speaker and the 23d time as Member of Congress. Only one other Member has repeated this vow as many times in the history of our country, that being the late Adolph J. Sabath, of Illinois.

It was my privilege to repeat in the Chamber of the House of Representatives this oath for the second time:

"I do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God."

The Honorable CARL VINSON, of Georgia, who entered the same Congress as Mr. RAYBURN, the 63d, but who was elected some months later to fill a vacancy, administered the oath to Mr. RAYBURN. This Congress is unique in the fact that for the second time in the history of the United States we have a President of one party and both Houses of Congress of the opposite party. This previously occurred during the administration of Zachary Taylor as a result of the election of 1848. With the convening of the 31st Congress in January of 1849, both Houses of Congress were controlled by the Democratic Party while the President, Zachary Taylor, was a Whig. Nebraska is 1 of the 6 States out of 48 that has an all Republican delegation in the House and Senate; the others are Connecticut, New Hampshire, Vermont, North Dakota, and Utah.

INAUGURATION

Many Nebraskans journeyed to Washington to attend the inaugural ceremonies of Dwight Eisenhower and RICHARD NIXON and to participate in the festivities of this historic occasion. It was a pleasure for me to welcome so many citizens of our State who were here to witness this impressive event including Governor Anderson and the Sidney, Nebr., High School Band. The presence of these young people in the inaugural parade was one of the highlights for all Nebraskans in Washington as well as for those who watched on TV back home. Townspeople of Sidney are deserving of a real pat on the back for their civic pride and interest in making possible this display of Nebraska youth and talent in our National Capital.

THE PRESIDENT'S STATE OF THE UNION MESSAGE

The President's state of the Union message was a comprehensive and general review of the administration's program. On the domestic front, school construction and civil rights will probably be the most controversial. Concerning Federal aid to education—it has always been my feeling that the people of Nebraska want to handle their school problems in their own way and dislike Fed-

eral interference. Our State has developed a fine educational system where we have local control and the people of the First District and other sections of Nebraska have indicated to me on numerous occasions their desire to work these problems out on matters pertaining to education.

A number of proposals that would keep Federal interference at a minimum will undoubtedly came before the Congress. Our neighbor, ERRETT SCRIVNER, of Kansas, has again introduced the so-called Scrivner plan. His bill provides that the collector of internal revenue of each State would remit to the State treasurer each quarter for educational purposes (or school construction) only 1 percent of the personal and corporate income taxes collected during that quarter. As an example, the income and corporate taxes collected from Nebraska for the fiscal year 1956 amounted to $343,254,000. That share which Nebraska would retain under the Scrivner plan would amount to $3,432,540. I agree with Mr. SCRIVNER'S statement, "Federal aid is a myth, that the money for any Federal program comes from taxes earned in each State." In the last session of Congress, I supported the Scrivner proposal and will do so again this year if it is before the House.

I was particularly pleased with that part of the President's message which referred to our soil; and to water as rapidly becoming our most precious natural resource. No one could be more aware or conscious of the full meaning of that statement than the people of Nebraska who for years have witnessed the scourge of these two extremes—drought and floods. With that thought in mind, we must be alert to a sound and realistic appraisal and canvas of our irrigation, reclamation, and power potential—not for next year but for the future needs of our State and Nation. It is incumbent upon us to be guided by the tone of the President's words: "Of making the best use of each drop of water from the moment it touches our soil until it reaches the ocean."

PRESIDENT'S BUDGET

Here in Washington, many members of both parties take a dim viewpoint of the budget outlook and consider it anything but a pleasant one. There are very few, I feel, who honestly know where the line should be drawn as to our defense expenditures in this present stage of international unrest. However, I know that many Congressmen and the majority of the people I represent in Nebraska share my viewpoint that foreign-aid spending must be stopped and that our overall budget must be reduced. A percentage cut across the board with the possible exception of the most essential defense items of our security (B-52's, intercontinental ballistic missiles, etc.) might be the proper approach. At least such a proposal would be an answer to the many agencies of Government which apparently cannot and have not realistically appraised their money needs. I am in full agreement with Congressman BEN JENSEN, of Iowa, who has called for open hearings on appropriation matters that come before the various Appropriations Subcommittees and the full committee of the House. Such a suggestion, if adopted, would, I feel, through public hearings eliminate much of the fat in this request of some $72 billion, which the people of Nebraska and the other 47 States must pay with their hard-earned tax dollars.

THE MIDDLE EAST RESOLUTION

Very shortly this forthright expression of policy by the President will come before Congress. It is similar in many respects to the Formosa Resolution passed almost unanimously in the beginning days of the 84th Congress—to put the enemy on notice that the Eisenhower foreign policy is "dedicated to a program of confining world communism to the borders it now occupies, and to resisting further Communist aggression in the free world." I am confident that this policy of firmness and decision, as it was in the case of Formosa, will promote the cause of world peace. However, the foreign-aid aspects of this question are controversial and it is a great disappointment to me that they are completely tied in with the resolution itself. This measure will come before the House under the so-called gag rule. If the rule is adopted and prevails in the consideration of the resolution, then this would preclude any amendments.

COMMITTEE ASSIGNMENTS FOR 85TH CONGRESS

Veterans' Affairs Committee: Subcommittees to be announced.

Interior and Insular Affairs Committee: Subcommittee: Irrigation and Reclamation, Territories, Public Lands.

Consent Calendar: Assisting Republican leadership on Consent Calendar items.

YOUR VIEWPOINTS (FEBRUARY 20, 1957)

In my last newsletter I requested all of you to pass on your comments concerning matters of Government and important questions before the Congress. May I express my thanks and appreciation for this fine response. It is this keen and continuing interest by you that will make for even better Government. Effective and direct representation through your elected Representatives who serve you in Washington is contingent upon the thinking of the majority of people back home. Please continue to write me so that I can have the benefit of your counsel and suggestions.

SPENDING IN GOVERNMENT

Of great concern to me, and certainly to those of you at home, is the amount of money requested in the budget for the fiscal year beginning July 1957—nearly $72 billion, the largest in the peacetime history of our country. This is the time we should be getting our own house in order, and I pledge to you a firm determination to continue to oppose and resist vigorously unnecessary spending in Government. There can be a reduction in spending on many fronts without impairing essential items of security for America. Foreign-aid spending and its many ramifications have brought a feeling of dependence by people in other parts of the world upon the initiative and thrift of American citizens.

Just a few days ago I received a letter from Mrs. William Landgraf, whose home is at Elwood, Nebr.; and I would like to quote several sentences from her letter: "My husband and I were missionaries in the southern part of India for many years. We saw the results of continuous material aid—it caused the people to become dependent upon these benefactors and demanded continued aid. It did not teach them self-reliance and desire to help themselves attain what they wanted or needed. Won't this continuous handout do the same to all countries receiving this aid? It is far easier to be careless and wasteful with someone else's money—there is the responsibility of receiving more."

WHO HANDLES THE PURSE STRINGS?

And while we are talking about money and spending in Government, I want to urge all of you to make your views known to the chairman of the House and Senate Appropriations Committees. They and their membership handle the purse strings of the Federal Treasury. CLARENCE CANNON, Democrat, of Missouri, runs the House committee, and CARL HAYDEN, Democrat, of Arizona, is the chairman on the Senate side.

Our President and his Secretary of the Treasury, Mr. Humphrey, have urged the Congress to appraise carefully the budget recommendations of the executive branch, with the hope that further cuts can be made by the Congress in these money requests. Senator BYRD, of Virginia, has been one of the watchful stalwarts in saving your tax dollars, and again this year is working in earnest to effect additional and further savings. Members of both parties are wary of the size of the budget, but the ultimate responsibility as to how much money is spent rests with the Democrats, because, after all, they control both Houses of Congress.

Last week in the initial appropriations measure submitted by the Eisenhower administration action by the House Appropriations Committee and the House itself cut nearly $47 million from this deficiency money bill—from $382 million to $335 million. But the Senate Appropriations Committee then put back nearly all of the $47 million—1 item alone was $30 million for a minerals buying program which was unnecessary and which the House had cut out completely.

PERMANENT STATUS FOR THE SMALL BUSINESS ADMINISTRATION

A few days ago I introduced legislation in the House of Representatives to give the Small Business Administration permanent status. Early in January the House passed a measure to increase the amount of money available for small-business loans. This legislation seeks to increase the Small Business Administraton's lending authority by $80 million—from $375 million to $455 million. Following the action of the House, the Senate took steps to approve this increase and passed the measure on January 29. It was signed into law by President Eisenhower on February 11, 1957.

Established under the first year of the Eisenhower administration in 1953, the Small Business Administration came into existence for an interim period expiring on June 30 of this year. This agency grants loans up to $250,000 on terms up to 10 years to small-business people. It is imperative, I feel, that this agency be maintained on a permanent basis, and that these additional funds be made available for loans. My proposal would provide indefinite operations and continued stability of the Small Business Administration. Address any inquiry to the Small Business Administration, Washington, D. C.

AMENDMENT TO THE BANKHEAD-JONES FARM TENANT ACT

On Monday of this week, I introduced a measure in the House to help our farmers refinance their loans with the Farmers' Home Administration. My bill would amend the Bankhead-Jones Farm Tenant Act as amended so that, in addition to real estate, livestock, and farm equipment, a farmer, at the discretion of the Secretary of Agriculture, could list stored agricultural commodities as well as other personal property as assets. Flexibility is necessary in any farm-credit program if we are going to restore our basic industry of agriculture to its rightful place in our overall economy. With extended drought and lower farm prices, we must remove unnecessary credit obstacles if the farmer is to survive. This suggested legisla'ion will permit a farmer applying for a loan with the Farmers' Home Administration to present a financial picture that correctly reflects his total assets and total liabilities and not a onesided picture that overlooks part of his true net worth.

RURAL MAIL ROUTE EXTENSIONS

I have just asked the Post Office Department to review its policy which now requires that three families per mile be benefited before a rural mail route can be extended. Many requests for rural-mail route extensions which have come into this office and to my attention during the past 2 years have been denied by the Post Office Department due to this arbitrary ruling.

In a letter to the Postmaster General, I pointed out that the present law provides that rural-mail delivery shall be extended so as to serve, as nearly as practicable, the entire rural population of the United States, and that the three-family policy was out-

moded and discriminated against many rural citizens in less heavily populated areas. Costs of investigations for these extensions by postal authorities would probably more than offset any increase in cost to provide this additional service. It is my contention that the Post Office Department now places too much emphasis on its three-family rule and not enough on other factors. If the Post Office Department does not liberalize this policy, then I plan to introduce and press for enactment of legislation which would remedy this injustice to our farm families.

NATIONAL GUARD

Recently an unnecessary and unfortunate statement about the National Guard was made by the civilian leader of our Armed Forces, Secretary of Defense Wilson. During World War II, my service was with airborne troops overseas and not with the National Guard. However, I know of the splendid overall record of Company B, 134th Infantry, from my hometown of Falls City. The exemplary conduct of this unit in battle bespeaks the record of similar units throughout our State and Nation. I am proud of our National Guard and its contribution to our country in peacetime as well as in war.

The proposal by the National Guard calling for 11 weeks' basic training contains merit. It would solve the present problem of National Guard recruit training because this period of instruction could be accomplished during vacation months at a substantial saving in manpower and dollars. You can be assured that I will give careful consideration to both sides of this question. I intend to support measures in Congress that will keep the National Guard strong so that it will retain its time-honored position in our Defense Establishment.

EMERGENCY LOAN DESIGNATION FOR NEBRASKA MARCH 29, 1957

The entire State of Nebraska has been designated through June 30 of this year as eligible for emergency loans under Public Law 727 of the 83d Congress. Such loans are based on the need for credit arising from general economic conditions where no other credit is available privately or under regular Farmers Home Administration credit programs. These loans are for the purpose of purchasing items such as feed, seed, fertilizer, etc., considered to be expense items necessary for conducting farming operations. It is expected that the processing of applications for these loans will start the first week in April.

A REVIEW OF THE RECORD

While serving as your Representative, I have conscientiously tried to practice what I preach as far as effecting economy in government. Nothing can be clearer in this respect than my recorded voting record. A brief rundown of some of these votes show where I stand.

Against increasing the salaries of Members of Congress and United States judges and attorneys.

Against increasing the salaries of the judges of various courts in the District of Columbia.

Against extending for 1 year the existing temporary increase in the public debt limit.

Against appropriations for foreign aid and Federal aid to education.

In addition, there have been many other items that I have opposed because they represented waste, duplication, and extravagance in Government. I intend to continue to work and vote against those measures that I do not consider justified or necessary in the conduct of the affairs of our country. Letters from many of you in recent weeks confirm that you wholeheartedly agree with my position.

FOREIGN AID

In recent weeks, I have had many visits with various members of the House Appropriations Committee concerning excessive spending and particularly that phase which I think is the worst of all, continuation of foreign aid. The members of this committee are diligently attempting to reduce every budget request because most of them are too high. This is certainly in evidence by substantial cuts in each appropriation measure that has been considered so far this session by this committee. It is further evidenced by actual cuts of about $140 million made by the House. I was tremendously pleased to find so much unanimity of opinion to meet this challenge and particularly on the subject of foreign aid. It is my impression that this committee may cut upwards of $2 billion from the foreign aid program. I will be in complete agreement with the committee members and the Congress only when all foreign aid is eliminated. Such a gesture would effect an enormous savings with which we could reduce our national debt and then hopefully look forward to necessary and needed tax relief for our citizens. The challenge is ours and we must face up to our responsibilities.

EXTENSION OF THE VETERANS DIRECT LOAN PROGRAM, H. R. 4602

The House this week passed H. R. 4602, a bill to encourage new residential construction for veterans in rural areas and small communities. The maximum amount in which direct loans can be made was raised from $10,000 to $13,500 and the interest rate was maintained at 4½ percent. This bill is to assist veterans in obtaining home loans in those areas where private financing has not been, and in most instances, is not now available.

At the end of 1956 there were about 20 million veterans of World War II and Korea. It is significant to note that of this number about 5 million have secured VA guaranteed or insured loans while some have obtained VA direct loans or conventional loans from private sources. Thus, some 15 million veterans of both Korea and World War II have not used any or part of their loan guaranty entitlement. This is quite revealing when we see that 40 percent of our veterans, who are still eligible for loans, live in 2,700 out of 3,076 counties in the United States which have been designated as in the direct-loan area. The other 60 percent live in the metropolitan areas. A report from our Veterans' Affairs Committee states: "The inequity of opportunity to obtain a home loan in various sections of the country is demonstrated by the fact that 3,234,438 veterans live in 1,635 rural counties where less than 10 percent have obtained a home loan, as compared with 2,857,307 veterans who reside in 126 metropolitan counties where more than 40 percent have obtained home loans." I feel that this constitutes a discrimination of the worst type.

In the consideration of this measure the matter of raising interest rates from 4½ percent to 5 percent came up. The House Veterans' Affairs Committee had previously voted this proposal down. I strongly feel that the veterans' home-loan program is a veterans' program and not a program designed as a basis for supporting the homebuilding industry. In the lengthy hearings that were conducted before our committee, the building and lending groups, in essence, urged that the interest rates be increased from 4½ percent to 5 percent. However, there were no assurances that such an increase would produce any additional money for veteran home loans. It was disclosed also that the life insurance companies had about $900 million in outstanding commitments for home loans with $150 million of this committed for 4½ percent VA loans. Therefore we must consider other factors. An increase of one-half percent interest on a $15,000 loan over a 25-year maturity will add $1,278 to the cost of the veteran's home. Furthermore, the eligibility of a veteran for a VA loan is contingent upon credit standards set up by the monthly home payment for principal, interest, insurance, and taxes. A veteran seeking a $15,000 loan at 4½ percent must have net earnings of $351 a month. If the rate is increased by one-half percent, he is required to have a monthly net earning of $370 a month. It is apparent then that a rate increase of one-half percent will render ineligible many veterans in the lower-income group who are seeking a loan and will saddle them with this additional cost. A desire to protect these veterans played a great part in a determination not to raise the interest rate.

The Wall Street Journal recently carried an article stating that the mortgage market is easing and quoted several banking officials as saying that future increases in interest rates are out and that some of the lenders are now looking for loans. I trust that this is a nationwide trend and, if it is, I believe veterans will be able to continue to obtain mortgage financing at an interest rate of 4½ percent. Nebraska is typical of the Nation. Only 17.4 percent of the World War II veterans in the first district have been successful in getting a VA loan as compared with the national average of 25.2 percent. Nothing was presented to our committee to indicate that an increase in the interest rate would cause morgage financing to flow into the areas where the least opportunity for the veterans has existed. H. R. 4602 will encourage the construction of homes for veterans removed from the more populous areas and give them the opportunity to own a home.

We must not look to the VA home-loan program as a means of supporting the home building industry. Our objective should be a liberalized FHA program for all prospective home owners. The future of the home building industry is dependent upon the development of a long-range housing program which will provide a reasonable basis for housing credit for all of the people of the Nation. H. R. 5315 which I have introduced is designed to carry out this purpose. I shall continue to seek its enactment since it is my contention that such a program will be necessary if the future of the home building industry so vital to the Nation's general economic health is to be assured.

THE BATTLE OF THE BUDGET (APRIL 29, 1957)

General opposition to the size of the budget along with close scrutiny of appropriation bills has jammed, to some extent, the legislative machinery of Congress. The House so far has acted on 8 appropriation bills for the fiscal year 1958. Cuts have totaled approximately $1,141,000,000. The Senate has not, as yet, acted on any of these bills. And the record will show that the Senate traditionally ups the figures set by the House. For example, for the fiscal year 1957, the budget recommendation was for $60,892,000,000. The House cut this to $58,584,000,000. The Senate then restored not only the $2,308,000,000 cut by the House but added another $367 million to it. With the record that the House has made to date in effecting substantial reductions in expenditures, the burden now rests with the Senate if these economies are to be a reality.

NEBRASKA PRINCESSES COME TO WASHINGTON

Nebraskans in Washington were happy to welcome recently two talented young ladies from the First Congressional District. Miss Jean Dibble of Bennet, Nebr., who represented our State as a princess in the annual Cherry Blossom Festival, and Miss Shari Lewis of Daykin, Nebr., who is the American Dairy Princess for 1957. Congratulations, Jean and Shari; we are proud of you.

THE POST OFFICE DEPARTMENT

The greatest loss today to the Post Office Department is in the handling of second- and third-class mail consisting primarily of

newspapers, magazines, and circular material. This deficit must be made up by general appropriations. As a result we are confronted with a postal subsidy in which the costs of handling the mail exceed rates charged for the service. For example, the Post Office Department has made the following estimates of the 1956 postal subsidy for 4 magazines: Life, $9.5 million; Saturday Evening Post, $6.1 million; Reader's Digest, $4.8 million; and Look magazine, $3.5 million. We must put the Post Office Department on a paying basis so that it can operate in the black. Corrective action, I feel, should be directed primarily at the class of mail causing the deficiency and not at the tax-paying general public.

WEST POINT, ANNAPOLIS, AND AIR FORCE APPOINTMENTS

All young men between the ages of 17 and 22 who want to attend one of our service academies should write to me in care of 440 House Office Building, Washington, D. C. Nominations for classes beginning in 1958 will be made this fall and I am interested in selecting the best qualified young men. A competitive examination will be held in July of this year to assist in this determination. Upon receipt of these letters, I will return an application form and full information on the academies.

UNITED STATES LOAN TO BRITAIN

A few days ago the House considered Senate Joint Resolution 72. Specifically the question was whether we were to postpone the interest and principal payments due the United States from England on a loan made to them in 1946. The facts are briefly this. At the end of World War II, a balance of $622 million was due the United States in settlement of the lend-lease account from World War II. In addition, the Truman administration in 1946 encouraged the making of a new loan to England of some $3¾ billion dollars. Therefore, the total amount of money involved was $622 million left over and due from lend-lease, plus the $3¾ billion of the new loan made in 1946, less 6 annual payments of $138.4 million paid by England beginning in December of 1951 and continuing through December of 1956. However, no interest was paid on the latter payment of principal. The entire loan was set up for 50 years to come due in the year 2000. It appears that the original loan agreement made with the British during the Truman administration had a number of compassionate features which provided among other things that under certain conditions the British might waive the entire interest payments in any given year. Along in 1953 the British intimated that if we did not renegotiate this loan with them to relax some of its terms, then the alternative would be for them to go to the International Monetary Fund to assert and claim their right of waiver of interest. And by waiving it, it meant writing this interest completely off. It did not mean postponement but it meant complete cancellation and forgiveness of interest due the United States.

In 1953 the English began their negotiations in an effort to take advantage of some of these weak provisions. They continued, however, to make principal and interest payments until December 31 of last year, and on this date they said, "Here is the principal but we claim waiver of the interest." The proposed new agreement presently under consideration by our Government would give the British an extension of 7 years—any 7 they select of the 44 years remaining on the original loan so that they could postpone the interest and principay payments for that year until a year beginning with the year 2001 and on up until the year 2007. So this year, for example, they could postpone principal and interest payments due in December until the year 2001, next year they could postpone it until the year 2002 and so forth with a maximum of 7 extensions or until the year 2007—7 years after the year 2000 which was the maturity date of the original loan. I could not support this measure to delay the payment of an honest debt to us. Each year since 1951 and until last year, payments have been made and the British claimed no right for waiving the interest. Principal was paid in 1956, but the interest amount was put in escrow. Now, for reasons of their own choosing, their claim a forgiveness of interest and wish to compel us to regegotiate the original agreement to their advantage. As Representative GROSS, of Iowa said, "In other words, we are financing the British backward and forward and now we are asked to fix it so they can go on into eternity refusing to pay their just obligations to this country."

The whole thing boils down to this—it was a poorly and loosely drawn hangover from the Truman-Acheson regime. Loopholes were left at our expense with concessions to the British if they desired to take advantage of them. I wanted no part of delaying a bad one-sided agreement any longer. Under these circumstances I would not responsibly be a part of any such proposition, and particularly in view of the fact that the British have just announced a general tax reduction for their own people—possible because of American dollars.

Here is what we have done for our British friends since 1917. These pertinent figures in the CONGRESSIONAL RECORD were quoted by Representative GAVIN, of Pennsylvania, from the U. S. News & World Report of March 22, 1957. "In 1917 we gave the British as a World War I loan $8 billion. In 1941, RFC loan, $390 million; 1941 to 1945, lend-lease, $22 billion; 1946, postwar loan $3,750,000,000. In 1948 to 1950, Marshall plan grants amounted to $2,400,000,000. In 1948 to 1950, Marshall plan loans amount to $337 million. In 1951 to 1956, defense aid grants of $851 million, and defense aid loans, $48 million. Or total aid from the United States of $37,776,000,000.

Our Government must stop this foolishness of doling out American dollars. We must diligently pursue a course that will bring about reductions in our national debt and tax relief for our citizens.

The House granted the British this extension by a vote of 218 to 167 and my vote was cast against it.

SOIL BANK (MAY 23, 1957)

The soil bank, as of this report, is dead after June 30 this year. An amendment was adopted in the House last week which knocked out $500 million for this program. The Senate must reverse this action for the program to be operative next year.

The soil bank was enacted too late last year to give it a real chance to work and it should have been given a fair test before being so abruptly stopped. Partisan politics played a large part in ending the program with 38 Republicans, mainly from the metropolitan areas, joining 154 Democrats to do the job. This same opposition defeated the recent emergency corn bill. While many programs have been ended by a denial of funds by Congress, and some rightly so, it is not a responsible way to legislate. It is not the responsibility of the Appropriations Committee to evaluate farm matters. That is the function of the House Agriculture Committee which conducts the hearings and makes the studies. Southern Democrats successfully led the attack against the soil bank. Why does the South have so much power in Congress? Congressman ARENDS, of Illinois, has this to say about it—

"The question has been asked why the South should have so much power in Congress. It is simply because the South, largely a one-party (Democratic) section of the country, reelects its Members of Congress, thereby gaining the seniority of committees. It is only after years of service that one, by virtue of his seniority, can become a committee chairman."

A sectional breakdown by residence of the 8 senior members of each party on the 19 committees of the House, lists 38 southerners in these key spots.

FOREIGN AID

Most of you are familiar with my stand on foreign aid. I have consistently voted against this gigantic giveaway. I would like to quote in part a recent letter from a constituent.

"Our giveaway in Europe is gaining us no good will. I know because I have traveled and visited most of the European countries several times in the last 15 years. I have many relatives in Denmark, where 3 of my cousins wrecked and tore down better barns than I have on my farm here, and built $30,000 and $40,000 fireproof barns (this is my estimated cost if built in this country), completely modern in every way with forced air-conditioning and heating, also running water. When I asked them how come, they stated they were helping their Government to use up the Marshall plan money for that year, so the Government's allotment would not be cut down for next year. Two other cousins built new large silos. None of them really needed help for themselves, but were helping their Government make use of the money. They laughed at us and thought we must be nuts."

This may demonstrate to some extent the lack of appreciation for our tax dollars abroad and why America has lost prestige and has, maybe, fewer friends the world over than we had before this program was started some 10 years ago.

THE DEFENSE BUDGET

The House Appropriations Committee has cut the Defense Department budget by $2½ billion. I intend to scrutinize this reduction very closely when it comes before the House to be certain that only nonessential items have been eliminated so that we will not impair, cripple, or endanger the security and defense of our country and our people.

POSTAL PAY RAISE

Many bills have been introduced in this Congress which would grant a pay raise to postal employees. Representatives of our postal people in Nebraska were in Washington recently to seek congressional support for this legislation. In order that my position may be made clear on this matter, I am taking this means to express my viewpoints to all of the constituents I represent. First, I am sure all of us are grateful to these faithful and loyal employees of the Government for the services they perform so that our mail quickly and safely reaches our homes and offices. When this matter came up in 1955, the facts then justified a reasonable salary increase, which I supported and which was passed by the Congress and signed into law by the President. It was my feeling at that time, as it is today, that we should be guided by a reasonable yardstick in decisions dealing with parceling out of public funds. On any expenditure we must always consider the cost because it is the taxpayer who ultimately foots the bill; and as you well know, since serving as your representative, I have consistently supported legislation which would reduce the cost of government.

H. R. 2474 is the bill prominently identified with postal groups seeking a pay raise. This measure would increase the average postal salary about $1,800 a year, or an increase of about 41 percent over the present salary scale. It is estimated that the additional per annum cost of the bill would approximate $1.3 billion for the fiscal year starting July 1, 1957. To make this measure

retroactive to January 1 of this year, as provided for in the bill, would add another half billion dollars to its cost. If similar salary increases were granted to other Federal employees and to the military, as has happened in the past, the cumulative cost of this action on the part of Congress in approving this specific legislation could run well over $5 billion a year.

There may be specific cases, particularly in the metropolitan areas, where the rise in the cost of living would warrant adjustments in the pay scale of postal and other Federal workers at this time. If these facts can be substantiated, then upon that basis, I would support an increase, providing it was reasonable and fair. A study is in progress at this time so that appropriate recommendations in this respect can be made. It is my duty as a Member of Congress to study legislation carefully, including committee and departmental reports, and then determine what is fair, not only for the people to be benefited, but for all the citizens I represent in the first district. I do not intend, for political advantage, to favor proposals which, in all probability, will not become law. Adverse reports on postal salary increase bills of the magnitude requested by H. R. 2474 have been received from the Post Office Department and the Bureau of the Budget. The administration itself has expressed opposition to this particular bill because of the excessive cost involved. This would indicate that, even though this legislation were passed by the Congress, it would almost surely be vetoed by the President. In 1955, the President pointed out, "There can be no compromise with the principle of fairness, and any pay legislation must be fair to all to whom it applies. It must be workable administratively and not be excessive in cost." This view expresses my thoughts in this regard.

Many postal employees have requested me to sign a discharge petition which would, in effect, discharge the House Committee on Post Office and Civil Service and the Rules Committee of the House from further consideration of H. R. 2474 and bring it directly to the floor of the House for action. The House operates on a committee system and the members of the various committees study and conduct hearings on numerous proposals with respect to specific legislation. Committee consideration of proposed bills is essential if Members of Congress are to be fully informed. Therefore, I do not think it would be proper or desirable for me to sign a discharge petition on a measure of this scope which, in the final analysis, would bypass this necessary part of our legislative process. There is no assurance that any bill brought to the House floor by this method would retain its original identity and remain intact. Very likely the sponsors of such legislation, by petition, in their effort to secure its passage might be compelled to accept amendments that would be unwise and irresponsible. History will show that this has sometimes been the case. I cannot be a party to any such proposition if I am to do this job right. Only two bills have become law by way of the discharge petition since the rule providing for them was adopted by the 61st Congress almost 50 years ago. As an illustration, from the 80th through the 84th Congress, 84 discharge petitions were filed. Four received the necessary 218 signatures to place the bills on the House Calendar. Two passed the House, but only one passed the Senate and became law.

DOLLARS FOR DEFENSE (JUNE 27, 1957)

The biggest single item today in our budget is the money we spend for the security of America. The cost is very high but it is cheap if we compare dollars with the lives of our sons. Next year's defense spending called for $36 billion. The House sliced $2.5 billion from this request which left it still $1,100,000,000 below the amount appropriated for the current fiscal year ending on June 30. The Senate must still act on this measure. An effort was made in the House to put back some $300 million for aircraft, missiles, research and development, and I supported this proposition. Here in this instance was the exception and not the rule for me, on where economy begins. It is apparent that we must keep pace if we are going to keep the peace. In these critical phases of our defense program, we must stay in a competing position with Soviet Russia and be certain, without doubt, that the security forces of the United States are not impaired, and that we are not letting down our guard. We cannot afford to lag behind in these highly technical and advanced scientific fields or find ourselves lulled into a false sense and feeling of security. No one wants waste, duplication, or extravagance in government, and we must be objective in searching these things out; however, we cannot afford to gamble on needed essential items of defense—particularly aircraft and missiles, when the very freedom of America is at stake.

Let's take a look at some of the costs of these defense items. A B–29 bomber of World War II cost about $600,000. The B–36 of Korea cost $4 million, and now the B–52 which is taking the place of the B–36 will average out at about $8½ million each. Submarines of World War II cost $4.7 million, then the cost went up during the Korean war to about $22 million, and today our nuclear submarines cost between $40 and $60 million. Many of the increases may be attributed to the growing complexity of these and other weapons now being procured, and price and wage boosts which the Defense Department must pay like anyone else for any goods and services that it wants. Prices for petroleum and petroleum products, metals and metal products and machinery have risen significantly during the last several years. In addition to the fuel price increase, modern jet aircraft are more expensive to operate because of increased fuel consumption. For example; one of the new jet engines consumes more fuel in an hour than you use in your car in a year, and the fuel costs of a B–52 for just 1 hour are $330. The cost of overhauling aircraft and other complex equipment is steadily increasing. Today it costs $44,000 to overhaul an Air Force F–102 fighter, more than double the amount it used to cost to overhaul an earlier model. So when we add everything up, we can see that a strong program of defense for our country is expensive, and as one Member of Congress has so many times said, "I would rather err on the side of strength than on the side of weakness," and I might add, "Because then it would be too late."

Congratulations to J. LeRoy Welsh, of Omaha, for his capable leadership as chairman of the five-man bipartisan Commission appointed by the President to study and make recommendations for the increased industrial use of agricultural products. We are determined that the rural citizens of America will come in for a greater share of our national prosperity, and the contributions by him and his associates in this field will greatly encourage the advancement of this program.

SP3C. WILLIAM S. GIRARD

During the past few weeks I have received numerous wires and letters from citizens of Nebraska protesting the trial of Sp3c. William S. Girard in the Japanese courts. First, may I say that I am in complete agreement with these expressions from home. On the basis of the facts that have been brought to light, Girard should have been tried by Army authorities. When this matter first came up, I went to the Pentagon and discussed the Girard incident personally with the Secretary of the Army, Wilber Brucker. Although the matter was then beyond his jurisdiction and authority, I can honestly say to you that he was in sympathy with my position and had so made known his views to his superiors but his recommendations were overruled. It might be well to review briefly the background of the United States-Japanese treaty adopted in 1953. Under the terms of this agreement the authorities of Japan have the prior right or jurisdiction to try members of the United States Armed Forces for an injury caused to a Japanese national unless—and this is the crux of the argument—such injury is one "arising out of any act or omission done in the performance of official duty." Since the commanding general of Girard's division certified that Girard's action was done in the performance of official duty, it is my feeling that the Army authorities should have jurisdiction over him.

This specific treaty with Japan is not technically a Status of Forces Treaty but in most respects it has the earmarks of one and the end results are the same. Therefore the whole Girard case focuses attention on the "Status of Forces" Treaty made with the NATO countries which was ratified by the Senate in 1953 by a vote of 72 to 15, and comparable arrangements similarly entered into since then between our Government and other foreign powers. As a Member of Congress, I have opposed this type of agreement which repeals international law followed for more than a century. In the absence of any treaty provisions and according to international law, our soldiers stationed abroad enjoy an immunity from civil and criminal jurisdiction. Yet, under these so-called Status of Forces Treaty arrangements with foreign governments, the United States must surrender to that country and its courts, a soldier who may be charged with violating the criminal laws of that nation. I shall continue to challenge the proponents of such international agreements—of a statuts-of-forces nature—which will permit an American boy who violates the law of a foreign nation to be tried and punished in a foreign court where the violation may have been unintentional, where there may have been no criminal motive, and where the act committed was not criminal under American laws.

From time to time amendments to legislation have been considered on the floor of the House which were designed to insure American boys an American trial if they committed a crime in a foreign country. I have always vigorously supported these amendments and will continue to do so in the interest of justice and equality to members of our Armed Forces. In 1955, Mr. Bow, Republican, of Ohio, and Mr. BUDGE, Republican, of Idaho, both introduced amendments to repeal portions of the Status of Forces Treaty agreements. The Budge amendment would have prevented any country where the Status of Forces Treaty is in effect from participating in our foreign-aid programs, unless that country waived a claim to try American soldiers in their civil courts and agreed to turn these American soldiers over to the United States authorities to be tried under our principles of justice. The Bow amendment would have restricted the sending of American troops to any nation refusing to comply in similar manner. In my newsletter under date of July 15, 1955, I stated, "Although both measures were rejected, I supported them as did many other Members of the House who believe that an American soldier should not be denied, as would be true in so many cases, a trial by jury."

Representative POFF, Republican, of Virginia, an able lawyer and a member of the House Judiciary Committee, says that advocates of the status-of-forces treaties argue that these treaties contain a list of nine rules, which guarantee a fair trial in foreign courts. However, according to Mr. POFF,

"A close examination of that list discloses that they do not guarantee a public trial, a jury trial, presumption of innocence, freedom from compulsory self-incrimination, freedom from double jeopardy, freedom of worship, speech, press or assembly, or a protection against hearsay evidence, excessive bail or cruel and unusual punishment," and finally, Mr. POFF says, "It is significant to note that in some nations of the world where food is scarce, the penalty for stealing a chicken is the removal of a hand and in nations where the cow is considered holy, a person convicted of killing a cow may receive the death penalty."

Status of the Old-Age and Survivors Insurance Program

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. REED. Mr. Speaker, in recent months there has been a number of reports in the press and elsewhere with respect to the actuarial solvency of the old-age and survivors insurance and disability insurance trust funds. For the most part these reports have concerned themselves with the imminence of the so-called cross over whereby annual fund surpluses become deficits as the result of an excess of disbursements over collections.

The old-age and survivors insurance program is an integral part of virtually every American's planning for his retirement security and for the security of his dependents in the event of his untimely death. To millions of American citizens the OASI system constitutes the basic foundation of retirement security and survivorship protection. Because of that fact I believe it appropriate that the Members of Congress and the American people have made available to them the most recent statement of the operation of the OASI trust fund issued by the Board of Trustees and a report of July 23, 1957, by the Department of Health, Education, and Welfare with respect to the financial status of the fund.

Mr. Speaker, because disbursements from the fund closely approximate OASI tax collections, because of the great fiscal implications contained in even modest reforms in the OASI system, and because of the public reliance on a soundly based program of OASI protection, it is extremely important that substantive amendments in the OASI program be carefully considered in public hearing, in executive session, and in debate on the floor before such changes are enacted into law. It was for that reason that at the time of the enactment of the meritorious social security amendments of 1954 during the Republican 83d Congress, careful and deliberate study of the proposed amendments was made by the Congress. In the 83d Congress a group of highly skilled nonpartisan experts made a thorough study of their social security system. As a result of their study, as a result of study by the appropriate departments in the administration, and as a result of study by the Congress, the social security amendments of 1954 were developed. These amendments constituted in my judgment the most important and the most beneficial changes made in the law since the program's inception.

These Republican improvements included the following changes in the law:

First. Coverage was extended to an additional 10.2 million American workers and their families, including farmers, State and local government employees, and self-employed professional individuals;

Second. Monthly benefits were increased for those already on the retirement rolls and an improved benefit formula was provided for those retiring in the future;

Third. Average benefit payments were raised by allowing the dropout of up to 5 years of lowest earnings;

Fourth. Benefit recipients were allowed to earn as much as $1,200 annually without loss of benefits;

Fifth. Benefit rights of individuals were protected during periods of total disability and other important improvements were made in the law that I shall not take the time to enumerate.

I stress the fact that these improvements were made possible by, and were the result of, thorough and complete consideration of the legislation in public hearings, in executive sessions, and in expert study.

In the Democrat-controlled 84th Congress social-security amendments were again enacted, but unfortunately such amendments did not receive the extensive study that circumstances warranted be given to them. The Republican members of the House Committee on Ways and Means constructively endeavored to have public hearings held on proposed changes to the Social Security Act at the time the Democrat members of the committee undertook to hastily prepare what they hoped would be a politically popular social security bill. This occurred in 1955 during the first session of the 84th Congress, and the Democrat majority ussed as an excuse for not holding hearings the fact that time remaining in the 1955 session of Congress did not permit a mature consideration of the proposed changes. The Democrats took this position despite the fact that they were proposing a multibillion dollar increase in the cost of the program, despite the fact that they proposed to increase the social security tax burden imposed on the American people, and despite the fact that there were many other meritorious proposals for improving the OASI system that were to be arbitrarily disregarded by the Democrat majority. The soundness of the Republican position on the legislation to the effect that hearings should be held so that the proposed amendments could be perfected and so that a priority could be established to determine the changes that would be most beneficial to the American people was clearly supported by the fact that the Senate took no action on the bill during 1955 and that the legislation did not become public law until August 1, 1956. The Republican Party supported the resulting amendments to the law but pointed out the need for more deliberate consideration of the proposed changes.

It is important to recount this legislative record of Republican responsibility and Democrat political motivation with regard to social-security legislation because of its implications with respect to future improvements in the social-security law that may become possible and may be deemed desirable and necessary. Under existing law the ultimate tax on covered wages is projected to become 9 percent effective in 1975 shared equally by employees and their employers. The self-employment tax would become 6¾ percent at that time. To evaluate the highness of these rates it must be remembered that the tax applicable to wages is a tax on gross wages without any allowance for personal exemptions, dependents, or other deductions. The tax on self-employment income is a tax on adjusted gross income and permits only certain business deductions. Consequently, as a percentage of net income, the tax is substantially higher than would be indicated by the actual rates. Mr. Speaker, these facts make it obvious that meritorious improvements in the social-security law which affect millions of Americans must be the subject of the most careful legislative study at such time as they are enacted. Democrat-controlled executive sessions are not enough. The public's stake in a sound social-security program is so great that the Democrat Party cannot responsibly pursue a course of closed-door sessions in the preparation of social-security amendments as they did in 1952 and again in 1954. Such legislation must not be brought up under suspension of the rules in the House of Representatives allowing only 40 minutes of debate in regard to a program that is so vital to the economic security of our great Nation.

As chairman of the House Committee on Ways and Means during the 83d Congress it was my privilege to be the author of the legislation which made sweeping improvements in our social-security program and which became known as the Social Security Amendments of 1954. As chairman of the committee at that time I insisted, with the support of my colleagues on the committee, that public hearings be held on the legislation and that full discussion be had on the subject before further legislative action was taken. It is my hope that further improvements in the law will come about only after such consideration in public session has occurred. As I stated previously I will include two documents relating to the actuarial status of the OASI trust fund for the information of all interested persons at this point in the RECORD:

Statement of operations of the Federal old-age and survivors insurance trust fund during the fiscal year 1956

Total assets of the trust fund, June 30, 1955			$21,141,001,461.71
Receipts, fiscal year 1956:			
Insurance contributions:			
Appropriations	$6,336,804,603.39		
Deposits arising from State agreements	171,565,577.42		
Gross insurance contributions	6,508,370,180.81		
Less payment into the Treasury for taxes subject to refund	66,000,000.00		
Net insurance contributions		$6,442,370,180.81	
Interest and profit:			
On investments	$487,450,075.05		
On amount held in railroad retirement account to credit of trust fund	7,439,000.00		
Total interest		494,889,075.05	
Total receipts		6,937,259,255.86	
Disbursements, fiscal year 1956:			
Benefit payments		5,360,813,247.00	
Administrative expenses:			
Department of Health, Education, and Welfare	$94,892,621.97		
Treasury Department	29,516,077.17		
Preparation for construction of building for Bureau of Old-Age and Survivors' Insurance	61,876.35		
Gross administrative expenses	124,470,575.49		
Less receipts for sale of surplus material, supplies, etc	131,867.92		
Net administrative expenses		124,338,707.57	
Total disbursements		5,485,151,954.57	
Net addition to trust fund			1,452,107,301.29
Total assets of the trust fund, June 30, 1956			22,593,108,763.00

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,
SOCIAL SECURITY ADMINISTRATION,
July 23, 1957.

FINANCIAL STATUS OF THE OLD-AGE AND SURVIVORS INSURANCE TRUST FUND

The trustees of the Federal old-age and survivors insurance trust fund, in their report to Congress dated March 1, 1957, state that the old-age and survivors insurance system is in actuarial balance. That is, for the long-range future the system will have sufficient income from contributions, based on the tax schedule now in the law, and from interest earned on investments, to meet all future payments for benefits and administrative expenses. Disbursements will grow, but so too will contribution and interest income.

It was widely recognized when the old-age and survivors insurance program was first established that the number of beneficiaries on the rolls, and hence the amount of benefit payments, would increase steadily for the next 50 or 75 years. This is due not only to the rising number of aged persons in the population but also because in the future a much larger proportion of aged persons is expected to be eligible to receive benefits under the program than at present.

To meet this expected future rise in benefit payments Congress has provided for gradually rising contribution rates. The combined employer-employee contribution rate to finance the retirement and survivor benefits under the program is now 4 percent of the first $4,200 of an employee's anual earnings. The combined rate is scheduled to rise to 5 percent in 1960; to 6 percent in 1965; to 7 percent in 1970; and to 8 percent for 1975 and later years. (Beginning in 1957, an additional one-half percent of taxable earnings is paid into a separate fund—the Federal Disability Insurance Trust Fund—to finance the payment of monthly insurance benefits to disabled workers between the ages of 50 and 65.)

Because of the long-run upward trend in benefit payments the excess of income over disbursements declines each year during the 5-year periods between scheduled tax increases. As a result, it has been recognized that the year-to-year growth in the trust fund would be smallest—the fund might even decline—for a time before each change in rate became effective. However, aggregate income of the fund over many years will exceed aggregate outgo, and thus the long-range trend in the size of the fund will be upward.

CURRENT DEVELOPMENT

1. Trust fund income has exceeded outgo in every year since the program started operations in 1937. As expected, the amount of this excess of income over disbursements—in other words, the net increase in the fund—has been declining for the past several years. Thus during the calendar year 1954 the fund increased by $1,869 million; during 1955, by $1,087 million; during 1956, by $856 million. Estimates now indicate that during calendar year 1957 the trust fund will increase by more than $100 million. The assets of the fund at December 31, 1957, are estimated at $22.6 billion. During 1958 the fund may increase slightly or decrease slightly. (A precise estimate of the direction of movement in 1958 is not possible because a slight variation in estimated income or in estimated disbursements can completely change the close balance that will apparently prevail for that year.) In 1959 it seems quite likely that the fund will decline. Then under the impetus of the rate increase beginning in 1960 the fund will rise substantially during the first 2 or 3 years of the next 5-year period, 1960–64.

2. Although contribution income to the trust fund is in line with and is expected to continue in line with estimates, current benefit expenditures are somewhat higher than was originally estimated. As a result, the temporary halt in the growth of the fund which was foreseen as a part of the general pattern of trust-fund growth has come about somewhat earlier than was expected.

3. Legislation in 1954 and 1956 extended coverage under the program to a number of occupational groups that were formerly excluded. More aged persons have become insured and filed claims for benefits as a result of these extensions of coverage than was originally estimated. Self-employed farmers are a major group among these claimants. Some 375,000 self-employed farm operators filed applications for retirement benefits by June 30, 1957. These higher than expected claims, coming primarily from a backlog of farmers, many of whom were well beyond the minimum retirement age under the program, represent largely a one-time event. The resulting additional benefit payments, although significant from a short-range viewpoint, have virtually no significance in relation to the program's aggregate disbursements over the long-range future and thus have virtually no effect on the financial soundness of the system.

4. A minor element in raising the amount of benefit payments over the short-range future beyond what was expected is a result of the provision, enacted in 1956, which lowered from 65 to 62 the minimum eligibility age for benefits to women. Benefits under this provision first became payable for the month of November 1956.

On November 1, 1956, there were an estimated 1,300,000 women between the ages of 62 and 65 who were eligible for old-age and survivors insurance benefits. Of this total, some 860,000 could draw benefits for November if they filed an application; the remaining 440,000 women were either workingwomen or wives whose husbands were working.

The number of women between 62 and 65 on November 1, 1956, who it was estimated would file applications for benefits before reaching age 65 was 740,000. About 710,000 have actually filed by June 30, 1957. It is estimated that an additional 80,000 such women will file applications before they reach age 65, bringing the total to 790,000, or some 7 percent in excess of the original estimate. However, current experience indicates that the excess over the estimate is the result of claims filed by women workers and wives. (It is not the result of claims filed by widows—who can receive full-rate benefits at age 62.) The higher disbursements arising from these additional claims will have no significant effect on the long-range cost of the system. This is because a woman who elects a retired worker's or a wife's benefit when she is between age 62 and age 65 will receive a reduced benefit both before and after age 65, which is, on an actuarial basis, virtually equivalent to the full-rate benefit that would have been payable at age 65.

CONCLUSION

The earlier-than-expected temporary halt in the anticipated future growth of the trust fund will have no significant effect on the long-run actuarial balance of the system. Moreover, there is nothing in recent experience under the old-age and survivors' insurance program which suggests the need for changes in the present contribution schedule in order to assure the continued financial soundness of the system.

Qualifying To Vote in Texas

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 30, 1957

Mr. YARBOROUGH. Mr. President, a few days ago speaking to a group of Democrats at San Antonio, Tex., I pointed out the necessity for poll-tax payments in Texas, beginning October 1, 1957, in order to qualify to vote in 1958. I request unanimous consent to include my remarks in the Appendix to the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

The first job for Democrats right now is getting the Democrats ready to vote in 1958. In a few weeks, on October 1, 1957, to be exact, the poll-tax paying period will open at the county tax collectors offices all over Texas.

Those of us who want democracy to flourish in Texas must work to wipe out the poor record we have had by qualifying ourselves to vote. Too few people in Texas qualify to vote and then vote. Government is everybody's job. You have a stake, a privilege, a duty, and an opportunity.

Wry should Texans bother to pay $1.75 this year? Well, the reasons are many. In the cities, there will be city elections and school board elections. There will be important bond elections. They will affect the tax rate of millions of Texas homeowners.

In the rural areas there will be elections on watershed flood prevention districts. There will also be some school elections and some county bond elections. Then there will be the elections of 150 members of the Texas House of Representatives and 15 members of the Texas Senate. Those elections are particularly important to rural people because of the attacks on their REA power program and on their rural roads program.

It is clear that the enemies of rural electric cooperatives have control of the machinery and a majority in the Texas Legislature, and there's just one cure for that—for the 230,000 Texas families who belong to the REA co-ops to pay their poll taxes and be ready to vote next July. Just recently, an attack has been launched on the farm-to-market road program. The enemies of this program were defeated in 1951, when they set out to do away with rural roadbuilding. They said the job was finished, that the farmer was out of the mud. They were defeated, and since that time, more than 12,000 miles of farm-to-market roads have been built in Texas. But school buses still travel thousands of miles of dusty, muddy, unpaved roads.

Now they are back at it again, with the same old song. They say there is no longer any need for paving rural roads, that the money ought to be switched to other uses. The issue will be decided at the polls in July and August of 1958. And it will be decided by the Texans who step up to the tax collector's window and ante up $1.75 for the right to be a practicing citizen in this State of ours. And you must pay that $1.75 by January 31, 1958, to vote to save REA and farm-to-market roads in Texas.

A large number of constitutional amendments will be submitted, to the qualified voters in November of next year. Then we have to elect a United States Senator, a governor, a lieutenant governor with power to appoint committees with life or death power over all legislation, a commissioner of agriculture, an attorney general, a land commissioner, a State treasurer, a railroad commissioner, and a comptroller.

But that is not all you get to decide on for the sum of $1.75. We have 22 Congressmen in Texas, and they'll all be up for reelection next year, except 1 who is talking about running for another office.

And then there are the precinct conventions of the Democratic Party, on the fourth Saturday in July of next year. You can't attend those conventions unless you have a poll tax or an exemption certificate for 1957. And here in Texas, the Democratic Party machinery is, as someone said the other day, the machinery of the State Government. Unless real Democrats qualify themselves and take part in those conventions, the party machinery will speak only for the few—perhaps those who have been trying to destroy the Democratic Party before, and who will do it again if we give them the chance. Right now our Democratic Party is headed in Texas by some officers who in 1952 tried to destroy the party, and who came back in 1956 and took charge again. Until the year-in-and-year-out Democrats who can be trusted to be faithful hold the party's top offices in Texas, we can continue to see the same thing happen again.

Let me put in a word of warning right now. The drought and Ezra Benson have driven many Texans off the farms and into the cities. Mama and papa, if they are past 60, have been voting each year in the country without getting exemption certificates. But if they've moved to town, to a city of 10,000 or more, they must get a new exemption every year. It broke my heart last spring to talk with dozens of fine Texans who wanted to help us, but hadn't known that they had to get an exemption each year now that they've moved to town.

You must pay your poll tax or get your exemption certificate between October 1, 1957, and January 31, 1958, so that you can vote in all elections and participate in the conventions in 1958.

So pay your poll tax or get your exemption, and get it early so you won't forget. Let's all be citizens in 1958, not just residents of Texas. Government is everybody's job. Hard money and high interest rate aren't accidents. Get ready to vote.

Analysis of All Rollcall Votes in the House of Representatives During the 1st Session of the 85th Congress

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. SIMPSON of Pennsylvania. Mr. Speaker, at the end of the 84th Congress I presented a statistical record which portrayed the support accorded President Eisenhower's legislative program by the members of both parties in the House of Representatives. Once again I have prepared similar tables covering the 1st session of the 85th Congress.

During this session there were 100 record votes. I have classified these rollcalls into four groups. Group 1 includes 26 issues which are not concerned with the President's program. Group 2 includes 23 issues on the President's program which were supported by a majority of the members of both parties. Group 3 includes 24 issues where a majority of the Republicans voted in opposition to the President's program. Although this looks like a great many rollcalls, I must add that 13 of these rollcalls involved amendments to a single bill, H. R. 6287, the appropriation bill for the Departments of Labor and Health, Education, and Welfare. One of these amendments involved a vote on a $30,000 item. I have no way of weighing rollcalls and hence have included the entire 24 in the group of Eisenhower rollcalls. However, these 13 are hardly representative of support for the President's overall program. Group 4 comprises 27 issues. These are the issues where the parties were clearly divided, a majority of the Republicans voting in support of the President and a majority of the Democrats in opposition to him. It is significant that this is the most numerous group.

Immediately following my remarks I have included the classification of each of the 100 rollcalls together with complete statistics for the Eisenhower rollcalls.

When we consider the entire list of 74 Eisenhower rollcalls, we find that of all the votes cast in support of President Eisenhower's position, Republicans account for 53.8 percent, and Democrats, 46.2 percent. Of all the votes cast in opposition to President Eisenhower's position, the Republicans were responsible for 36.6 percent, and the Democrats for 63.4 percent.

When we compute Republican and Democrat support scores for the entire list of 74 Eisenhower rollcalls, we find a Republican support score of 64.7 percent and an opposition score of only 35.3 percent. The Democrat support score is 47.7 percent, the opposition score, 52.3 percent. Mr. Speaker, let me add that these percentages include the 13 rollcalls already discussed, as well as the 23 issues where a majority of both parties supported the President.

The support score for the 27 issues where the parties were divided is most revealing. The Republican support score was 82.4 percent, and the opposition only 17.6 percent. On the other hand, the Democrat support score for these issues was only 16 percent, and their opposition score 84 percent.

The President needs a Republican 86th Congress so that he may complete the task he has undertaken.

Classification of all House rollcalls, 85th Cong., 1st sess.

Record vote No.	Eisenhower position	Group	Description
1	----------	1	Election of Speaker.
2	Y	2	Middle East policy (H. Res. 123)—Providing for the consideration of H. J. Res. 117, authorizing the President to undertake economic and military cooperation with nations in the general area of the Middle East. Passed 262 to 146.
3	Y	2	Middle East policy (H. J. Res. 117)—Authorizing the President to undertake economic and military cooperation with nations in the general area of the Middle East. Passage. Passed 355 to 61.
4	----------	1	1957 deficiency appropriations (H. R. 4249)—Lanham amendment placing a $15,728,000 limitation on amount to be spent for State and local administration of public-assistance grants. Passed 205 to 168.
5	N	4	Drought relief (H. R. 2367)—Providing for payment to ranchers for deferred grazing as part of relief available to drought-stricken areas of the Southwest. Passage. Passed 270 to 109.
6	Y	2	Middle East policy (H. Res. 188)—Providing for House agreement to Senate amendments to H. J. Res. 117, authorizing the President to undertake economic and military cooperation with nations in the general area of the Middle East. Passage. Passed 350 to 60.
7	N	4	Budget (H. Res. 190)—Requesting the President to indicate where substantial reductions in the 1958 budget may best be made. Passage of H. Res. 192, providing for consideration of H. Res. 190. Passed 219 to 185.
8	Y	4	Budget (H. Res. 190)—Motion to recommit and substitute resolution commending President for requesting departments to review budget requests to determine where cuts can be made, and requesting the President to make information received available to the House of Representatives. Rejected 185 to 214.
9	N	4	Budget (H. Res. 190)—Passage. Passed 220 to 178.
10	N	4	Corn program (H. R. 4901)—Establishing a minimum acreage allotment for corn. Motion to recommit. Rejected 168 to 237.
11	Y	4	Corn program (H. R. 4901)—Passage. Rejected 188 to 217.
12	N	4	Monetary and credit investigation (H. Res. 85)—Authorizing the Committee on Banking and Currency to conduct studies and investigations, and to make inquiries relating to operation of the monetary and credit structure of the United States. Passage. Rejected 174 to 225.
13	N	3	1958 appropriations for Departments of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $30,000 the appropriation for 3 new positions in the Department of Labor to handle international labor affairs in South America and the Near East. Passed 286 to 126.
14	N	3	1958 appropriations for Departments of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $204,000 the appropriation for new positions in the Office of the Solicitor, Department of Labor. Passed 241 to 171.
15	N	3	1958 appropriations for Departments of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $46,300 the appropriation for new positions in the Bureau of Labor Standards, Department of Labor. Passed 246 to 169.
16	N	3	1958 appropriations for Departments of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $136,000 the appropriation for new positions in the Bureau of Veterans' Reemployment Rights. Rejected 137 to 275.
17	N	3	1958 appropriations for Departments of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $442,000 the appropriation for new positions in the Bureau of Employment Security, Department of Labor. Passed 214 to 205.
18	N	3	1958 appropriations for Departments of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $12,186,000 funds for grants to States for unemployment compensation, thus eliminating an increase requested by Bureau of Budget over departmental request and eliminating contingency funds. Passed 220 to 200.
19	N	3	1958 appropriations for Departments of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $1,500,000 funds for unemployment compensation for Federal employees and provide same amount used in 1957. Passed 253 to 167.
20	N	3	1958 appropriations for Departments of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $263,800 the appropriation for new positions in the Mexican farm labor program. Passed 342 to 77.
21	N	3	1958 appropriations for Departments of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $346,000 the appropriation for new positions in the Bureau of Labor Statistics. Passed 217 to 202.
22	N	3	1958 appropriation for Departments of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $31,000 the appropriation for new positions in the Women's Bureau. Rejected 206 to 210.
23	N	3	1958 appropriations for Departments of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $288,000 the appropriation for new positions in the Wage and Hour Division, Department of Labor. Passed 214 to 205.
24	N	3	1958 appropriations for Departments of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $1,327,000 the increase in funds for expansion of the Food and Drug Administration. Rejected 130 to 285.
25	N	3	1958 appropriations for Departments of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to reduce by $1,482,000 the appropriation for new positions in the Office of Education. Rejected 206 to 207.
26	Y	4	1958 appropriations for Department of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Amendment to delete language providing $50 million to municipalities for waste treatment works construction. Rejected 185 to 231
27	----------	1	14th Street Bridge (H. R. 6306)—Increasing the authorized cost of construction of 4-lane bridge to replace the existing 14th Street Bridge across the Potomac River. Passage. Passed 190 to 131.
28	Y	3	British loan (S. J. Res. 72)—Approving an agreement amending the Anglo-American financial agreement of Dec. 6, 1945, relative to deferment of certain interest payments. Passage. Passed 218 to 167.
29	N	4	Committee expenses (H. Res. 191)—Providing $350,000 (in lieu of $100,000) for purpose of investigating studies by House Committee on Interstate and Foreign Commerce. Passage. Passed 225 to 143.
30	N	3	1958 appropriations for the Department of State, Justice, and Judiciary (H. R. 6871)—Amendment to reduce by $7,039,958 the appropriation for the United States share of the cost of international organizations of which we are a member. Rejected 167 to 205.
31	N	4	1958 appropriations for the Department of Agriculture and the Farm Credit Administration (H. R. 7441)—Amendment to suspend operation of the soil bank program at the end of fiscal year 1957 and to delete provisions for $500,000,000 for the 1958 program. Passed 192 to 187.
32	----------	1	1958 appropriations for the legislative branch (H. R. 7599)—Motion to recommit with instructions to delete $7,500,000 for construction of an additional House Office Building. Rejected 176 to 206.
33	----------	1	1958 appropriations for the legislative branch (H. R. 7599)—Passage. Passed 279 to 93.
34	N	4	Lake Michigan water diversion (H. R. 2)—Authorizing the State of Illinois and the Sanitary District of Chicago to divert additional water from Lake Michigan into the Illinois Waterway. Passage of H. Res. 254, providing for consideration of H. R. 2. Passed 267 to 102.
35	Y	4	Lake Michigan water diversion (H. R. 2)—Motion to recommit until the bilateral discussions between the United States and the Dominion of Canada with respect to the further diversion of water from Lake Michigan have been concluded. Rejected 143 to 225.
36	N	4	Lake Michigan water diversion (H. R. 2)—Passage. Passed 223 to 144.
37	N	2	Judicial retirement (H. R. 985)—Providing that chief judges of circuit and district courts shall cease to serve as such upon reaching the age of 75. Motion to recommit. Rejected 47 to 293.
38	Y	4	1958 appropriations for the Department of Defense (H. R. 7665)—Motion to recommit with instructions to restore $313,000,000 of the committee cut of $2,586,775,000. Rejected 151 to 242.
39	----------	1	1958 appropriations for the Department of Defense (H. R. 7665)—Passage. Passed 394 to 1.
40	Y	2	Rule, civil rights (H. Res. 259)—Providing for the consideration of H. R. 6127, providing means of further securing and protecting the civil rights of persons within the jurisdiction of the United States. Passed 290 to 117.
41	N	4	Civil rights (H. R. 6127)—Providing means of further securing and protecting civil rights of persons within the jurisdiction of the United States. Motion to recommit with instructions to add provision for jury trial in contempt proceedings. Rejected 158 to 251.
42	Y	2	Civil rights (H. R. 6127)—Passage. Passed 286 to 126.
43	Y	3	3d supplemental appropriations for 1957 (H. R. 7221)—Motion to agree to Senate amendment providing $14,000,000 for initiation of Federal flood-insurance program. Rejected 186 to 218.
44	Y	2	Agricultural Trade Development and Assistance Act of 1954 (H. R. 6974)—Extending for 1 year. Passage. Passed 345 to 7.
45	Y	2	Small Business Act (H. R. 7963)—Amending Small Business Act of 1953, making the Small Business Administration a permanent agency. Passed 393 to 2.
46	----------	1	1958 appropriations for the Departments of Labor and Health, Education, and Welfare, and related agencies (H. R. 6287)—Motion to recommit the conference report. Rejected 73 to 321.
47	----------	1	Senate Office Building (S. 1428)—Authorizing furniture and furnishings for the additional office building for the U. S. Senate. Motion to recommit with instructions that the House Public Works Committee insert specific cost figures. Rejected 135 to 232.
48	----------	1	Senate Office Building (S. 1429)—Authorizing the enlargement and remodeling of Senators' suites, and other changes and improvements in the existing Senate Office Building. Motion to recommit with instructions that the House Public Works Committee insert specific cost figures. Rejected 148 to 216.
49	Y	4	Military public works bill (H. R. 8240)—Authorizing certain construction at military installations. Amendment deleting from bill section requiring congressional review of action by Defense Department to eliminate activities competing with small businesses. Rejected 183 to 230.
50	Y	4	Federal advisory committee (H. R. 7390)—Providing for limitation and regulation of the use of advisory committees within the executive branch. Motion to recommit to the Committee on Government Operations with instructions to receive further testimony from the Department of Defense and the Post Office Department. Rejected 182 to 225.

Classification of all House rollcalls, 85th Cong., 1st sess.—Continued

Record vote No.	Eisenhower position	Group	Description
51	N	2	Reorganization Act of 1949, amendment to (H. R. 8364)—Amending so that such act will apply to reorganization plans transmitted to Congress at any time before July 1, 1959. Motion to recommit. Rejected 46 to 338.
52	----------	1	Veterans' benefit (H. R. 72)—Amending the World War Veterans' Act of 1924 to restrict the transfer of estates of incompetent veterans derived from compensation and pensions. Motion to recommit. Passed 191 to 161.
53	N	2	Mutual Security Act of 1957 (S. 2130)—Motion to recommit to delete provisions creating the development loan fund. Rejected 181 to 227.
54	Y	2	Mutual Security Act of 1957 (S. 2130)—Passage. Passed 254 to 154.
55	N	3	Postal pay increase (H. R. 2474)—Providing for a $546 increase in basic salary of employees in the postal field service. Passage. Passed 379 to 38.
56	N	3	School construction (H. R. 1)—Providing for Federal assistance to States for school construction. Motion to strike the enacting clause (and prevent further consideration of the bill). Passed 206 to 203.
57	Y	2	Airways modernization (S. 1856)—Establishing the Airways Modernization Board to provide for the development and modernization of navigation and traffic control facilities. Passage. Passed 375 to 17.
58	----------	1	San Angelo project (H. R. 2147)—Providing for the construction of the San Angelo Federal reclamation project, Texas. Motion to recommit. Rejected 189 to 202.
59	----------	1	San Angelo project (H. R. 2147)—Passage. Passed 201 to 190.
60	Y	2	Niagara power (H. R. 8643)—Authorizing the public construction of certain works of improvement in the Niagara River for power, and for other purposes. Passage. Passed 313 to 75.
61	----------	1	District of Columbia tunnel (H. R. 6763)—Providing for the construction of a 4-lane tunnel under the Potomac River in the vicinity of Constitution Ave. in lieu of a bridge previously authorized. Motion to consider the bill. Passed 297 to 76.
62	----------	1	District of Columbia tunnel or bridge (H. R. 6763)—Motion to strike enacting clause (and prevent further consideration of the bill). Rejected 175 to 194.
63	----------	1	District of Columbia tunnel or bridge (H. R. 6763)—Motion to consider the bill. Passed 275 to 59.
64	----------	1	District of Columbia tunnel or bridge (H. R. 6763)—Amendment changing the bill to provide for a 6-lane bridge in lieu of a tunnel. Passed 226 to 109.
65	Y	2	Panama (H. R. 6709)—Implementing a treaty and agreement with the Republic of Panama. Motion to suspend the rules and pass the bill. Passed 279 to 91.
66	N	3	1958 supplemental appropriations (H. R. 9131)—Motion to recommit with instructions to reduce appropriation of new funds for TVA by $9,784,000. Rejected 158 to 244.
67	----------	1	1958 supplemental appropriations (H. R. 9131)—Passage. Passed 330 to 75.
68	----------	1	Meat-promotion program: Rule (H. Res. 362)—Providing for the consideration of H. R. 7244, amending the Packers and Stockyards Act of 1921, permitting deductions for a self-help meat-promotion program. Passage. Rejected 175 to 216.
69	----------	1	District of Columbia Auditorium Commission (H. R. 4813)—Extending the life of the District of Columbia Auditorium Commission. Adoption of conference report authorizing the acquisition of certain land for a District auditorium-cultural center. Rejected 115 to 284.
70	Y	2	International Atomic Energy Agency (H. R. 8992)—Providing for United States participation in the organs of the International Atomic Energy Agency. Motion to delete provision for congressional control over distribution of nuclear material and deleting authorization for matching of material with other members. Passed 298 to 100.
71	Y	4	Atomic Energy Commission authorization (H. R. 8996)—Amendment deleting $3,000,000 for design and construction estimates of a plutonium reactor. Rejected 197 to 201.
72	Y	4	Atomic Energy Commission authorization (H. R. 8996)—Amendment deleting $55,000,000 for construction by the Commission of a natural uranium and a plutonium recycle reactor. Passed 211 to 188.
73	Y	4	Atomic Energy Commission authorization (H. R. 8996)—Amendment revising cooperative power reactor demonstration program and deleting provision for Government ownership and operation of generating plants. Passed 213 to 185.
74	Y	2	Atomic Energy Commission authorization (H. R. 8996)—Passage. Passed 383 to 14.
75	Y	3	Federal employees pay raise (H. R. 2462)—Providing an 11-percent across-the-board salary increase for classified Federal employees. Motion to recommit. Rejected 70 to 319.
76	N	3	Federal employees pay raise (H. R. 2462)—Passage. Passed 329 to 58.
77	----------	1	Public works appropriation (H. R. 8090)—Making appropriations for civil functions administered by the Department of the Army and certain agencies of the Department of the Interior for fiscal year 1958. (Conference Report.) Motion to agree to Senate amendment earmarking $500,000 for preparing plans for Bruces Eddy project on Clearwater River, Idaho. Rejected 23 to 363.
78	Y	4	Postal rate adjustment (H. R. 5836)—Increasing certain postal rates. Passage. Passed 256 to 129.
79	Y	2	Mutual Security Act of 1957 (S. 2130)—Adoption of conference report increasing amount authorized by House by $250,000,000 and extending development loan fund to 1960. Passed 226 to 163.
80	----------	1	Freight forwarders (S. 1383)—Amending the Interstate Commerce Act to change the requirements for obtaining a freight forwarder permit. Passage. Passed 177 to 176.
81	Y	4	1958 appropriations for mutual security (H. R. 9302)—Motion to recommit with instructions to increase various items by $715,000,000. Rejected 129 to 254.
82	----------	1	1958 appropriations for mutual security (H. R. 9302)—Passage. Passed 252 to 130.
83	N	3	Air-carrier loans (H. R. 7993)—Providing for Government guaranty of private loans to certain air carriers. Motion to suspend the rules and pass the bill. Passed 242 to 94.
84	Y	3	District of Columbia Stadium (H. R. 1937)—Authorizing the construction, maintenance, and operation by the District of Columbia Armory Board of a stadium in the District of Columbia. Adoption of conference report. Rejected 135 to 234.
85	----------	1	West Virginia Dam (S. 1520)—Providing for the disposal of dam on Little Kanawha River in West Virginia (conference report). Motion to recommit to conference with instructions to insist on House provision limiting Federal contribution to $50,000 as recommended by Corps of Engineers instead of $112,000 as provided in report. Rejected 137 to 232.
86	N	3	1958 supplemental appropriations (H. R. 9131)—(Conference report.) Motion to recede and concur in Senate amendment striking out funds for construction of an additional airport in or near Washington, D. C. Rejected 125 to 233.
87	N	4	1958 supplemental appropriations (H. R. 9131)—Motion to agree to Senate amendment providing an additional $475,000 for the Columbia River project. Rejected 141 to 216.
88	Y	4	1958 appropriations for the Atomic Energy Commission (H. R. 9379)—Amendment restoring $30,000,000 for industry cooperative program. Passed 214 to 135.
89	----------	1	H. Con. Res. 176—Authorizing the printing of 500,000 additional copies of an illustrated booklet on the Capitol at cost of $95,000. Passage. Passed 183 to 129.
90	N	4	1958 supplemental appropriations (H. R. 9131)—(Conference report.) Motion to recede from disagreement on Senate amendment providing an additional $475,000 for the Columbia River project. Passed 166 to 121.
91	N	4	1958 supplemental appropriations (H. R. 9131)—Motion to agree to amendment providing for $425,000 for Columbia River project. Passed 165 to 120.
92	N	4	Air-carrier loans (S. 2229)—Providing for Government guaranty of private loans to certain air carriers. Adoption of conference report. Passed 203 to 77.
93	----------	1	Contempt citation, Louis Earl Hartman (H. Res. 407)—Citing Louis Earl Hartman for contempt of the House of Representatives by his refusal to answer questions before the Committee on Un-American Activities. Passage. Passed 276 to 0.
94	----------	1	Contempt citation, Bernard Silber (H. Res. 409)—Citing Bernard Silber for contempt of the House of Representatives by his refusal to answer questions before the Committee on Un-American Activities. Passage. Passed 263 to 0.
95	Y	2	Civil rights, H. Res. 410 (H. R. 6127)—H. Res. 410, providing for House agreement to Senate amendments to H. R. 6127 (civil-rights bill) with a further amendment limiting jury trials in criminal contempt proceedings. Ordering the previous question. Passed 274 to 101.
96	Y	2	Civil rights, H. Res. 410 (H. R. 6127)—Passage. Passed 279 to 97.
97	Y	2	FBI files (H. R. 7915)—Clarifying the Supreme Court decision in the Jencks case which opened FBI files to perusal of defendants under certain circumstances in Federal court cases. Passed 351 to 17.
98	Y	2	Immigration (S. 2792)—Amending the immigration laws so as to facilitate the entry into the United States of certain adopted children and other relatives of United States citizens. Motion to suspend the rules and pass the bill. Passed 295 to 58.
99	Y	2	FBI files (H. R. 7915)—Adoption of the conference report. Adopted 315 to 0.
100	Y	2	1958 appropriations for mutual security (H. R. 9302)—Adoption of the conference report. Adopted 194 to 122.

The Embattled 85th Congress

EXTENSION OF REMARKS
OF
HON. CHARLES B. BROWNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 30, 1957

Mr. BROWNSON. The 1st session of the Democratic-controlled 85th Congress adjourns today, unwept and unmourned.

The House met for 585 hours on 141 days and enacted 166 public bills on which there were 100 rollcall yea-and-nay votes. Everyone went through all the accepted motions but it was a session of inactivity and frustration, especially for a Republican. For this Congress was different. It was the first Congress since 1848 to be elected in a presidential election year by the party in opposition to the one winning the White House. And it was the first to serve with a President barred by constitutional amendment from seeking another term. Referring to the accomplishment of the 1st half of the 85th Congress, Democratic leaders are saying:

It is sufficient to say it was a job well done. (Senator LYNDON JOHNSON, Democrat, of Texas, Senate majority leader, CONGRESSIONAL RECORD, August 30.)

One of the most fruitful I have ever attended. * * * Very impressive. (House Speaker SAM RAYBURN, Democrat of TEXAS, Washington Post and Times Herald, August 30.)

We can leave here with a feeling of having done a great job. (Representative JOHN W. MCCORMACK, CONGRESSIONAL RECORD, August 30.)

The Congress has made a record of solid legislative accomplishment. (Paul Butler, chairman of the Democratic National Committee, New York Times, August 31.)

High praise for sitting on their hands.

The liberal Democrats came to this session convinced that the Republicans' loss of the Congress was a mandate for them to resurrect every public power, public housing, Federal aid to education and social welfare bill which had been voted down in the past, and pass it in 1957. Early in the session 80 northern Democrats signed a so-called manifesto advocating social legislation which would have added at least $10 billion a year to the budget—this year and every year in the future.

President Eisenhower's $71.8 billion budget shocked the conservative Members of Congress, and, more important, it shocked the American public. The people considered the fact that we must continue to arm with conventional weapons, which will soon be obsolete, while we pour billions into the development of missiles and nuclear arms. They still thought the budget was too high and contained fat which could be eliminated. From constituents in every walk of life came letters by the thousands. On tablet paper, perfumed note sheets, business

stationery, and in telegrams, they protested this high rate of spending tax moneys.

In Congress, we fought the battle of the budget from February, when the first appropriation bill came before us, right up to the last day of the session when I voted against final passage of the foreign-aid appropriations. Up to August 2, the best available figures indicate that House Republicans, as a whole, supported economy 60 percent of the time, while House Democrats have an economy support record less than half that good, 29 percent.

BROWNSON'S ECONOMY VOTING SCORE HIGH

According to Walter Trohan's article in the Chicago Sunday Tribune—August 4, 1957—I supported economy on 22 out of 25 votes. This earns for me an economy support score of 81 percent. This score compares with such widely known economy advocates as Congressman NOAH MASON, Republican, of Illinois, who supported economy 22 times out of 24 for an economy score of 81 percent, the same as mine. Senator HARRY FLOOD BYRD, Democrat, of Virginia, widely recognized advocate of cutting Government spending, supported economy 16 times out of 20 in the Senate for a percentage score of 70 percent. The 2 Democratic Congressmen from Indiana are each listed as having voted for economy 4 times and against economy 23 times for an economy score of 15 percent.

As your representative, I voted for every budget cut to pass the House, and for many which did not. Had a majority of Congress agreed with all my economy votes, an additional $3,064,584,958 would have been saved over and above the actual $4,914,355,584 Congress succeeded in cutting from the budget. In addition to reducing the 1958 fiscal budget, we also sliced $134,023,395 from 1957 supplemental appropriations.

An ironic sidelight on the budget battle was the role played by the Democrats, traditionally the party of big spending, who desperately tried to parlay the demand for economy into a partisan issue. When public sentiment became too obvious to ignore they were quick to talk economy although they continued to quietly proud behind the scenes for increases in various appropriations, notably in foreign aid. As the taxpayers became more vocal in their demand for budget cuts, the Democrats became increasingly vocal in proclaiming their frugality—this despite the fact that earlier in the session 80 northern Democrats in the House signed the manifesto calling on the President to vastly expand Federal spending programs. Their lack of sincerity is obvious when you compare the overall economy support record of the House Republicans—60 percent, and the House Democrats, 29 percent.

THE NEED FOR H. R. 8002

In the wake of the budget cuts came conflicting pronouncements of the exact amount by whih the budget actually was reduced. This annual confusion stems from our present clumsy budgeting procedures involving an obligation budget and expenditures estimates. Congressional appropriations are presently geared to the obligation budget, and congressional action on the 1958 budget relates to agency obligation budgets totaling $73.3 billion and not to the $71.8 billion that the Executive estimated for expenditures.

One of the greatest disappointments I experienced this year was the stubborn inaction of the Democrat-controlled House on H. R. 8002, a bill implementing Hoover Commission proposals, and designed to modernize Federal budgeting. The bill would increase congressional control over the annual rate of Federal expenditures by requiring an annual review to be taken by Congress on both existing and proposed programs. It will minimize carryover balances of appropriations given in one year and expended in later years. This annual accrued expenditure method would be applied on a gradual basis to the extent, in such manner, and at times as may be determined by the President.

The legislative history of H. R. 8002 thus far has been stormy. I fought for and voted for the bill in my Government Operations Committee, with the result that it ultimately was placed on the Consent Calendar. There, members of the Democrat-controlled House Appropriations Committee, from less than unselfish motives, successfully blocked it from coming to the floor. Transferred to the general calendar, the bill once again was stalled, this time by being ignored by the Democrat leadership. What the fate of H. R. 8002 will be next year, I hesitate to predict; that there is a crying need for it is a certainty.

FOREIGN AID

Results of the economic portions of the foreign aid program appear so nebulous when considered in proportion to the heavy burden it places on the American taxpayers and the administration of this program is still so loose that I felt compelled to vote against both the original authorization bill and final passage of the appropriation bill. One of my very last legislative acts of the first session was on adjournment day, August 30, when I voted "nay" on the foreign aid conference report appropriating $2,768,760,000. Personal investigations in line with my committee assignments have disillusioned me with the manner in which our tax dollars are being spent abroad, and with the vague justifications brought to Congress to substantiate the need for these funds.

FEDERAL SCHOOL AID

By a shockingly narrow margin of only 5 votes—208 to 203—we managed to defeat the Federal aid to school construction bill. I twice took the floor to speak at length against this inherently dangerous measure, and while relieved that it was defeated, I wish I could be sure that this year's victory was not only temporary. Already two new school aid bills have been introduced in Congress, one in the Senate, the other in the House. Each day's mail brings printed material from organized, professional proponents of Federal school aid. Dues have been doubled by the National Education Association, chief advocate of the program, to make possible a $7 million budget for the coming year. More than $677,000 has been set aside for NEA Federal relations lobbying, to be conducted both in the Capitol and in grassroots areas. I am extremely anxious for the future of State-supported educational systems.

The fact that former NEA Legislative Committeeman Lawrence G. Derthick is still United States Commissioner of Education is not cheering, especially in view of his statement in a recent Newspaper Enterprise syndicated story. Commissioner Derthick told reporters that "the fight for Federal aid to school construction will continue in spite of the defeat" of the "proposal recently suffered in Congress."

My 11th District constituents, who have done a commendable job in providing the finest of educational facilities for their own youngsters, made me proud by supporting wholeheartedly my fight against Federal school aid. In the letters they wrote me, their opposition to this program was in a ratio of 20 to 1.

POSTAL AND CLASSIFIED PAY

Both House and Senate approved pay raises for postal and Federal classified workers, but the Democrat-controlled Senate Post Office and Civil Service Committee delayed reporting the pay bills until so late in the session that passage came right on the heels of adjournment. This move made possible the Presidential pocket veto and prevented Congress from having an opportunity to override that veto if it so chose. The veto was almost inevitable because of the Senate's failure to pass the postal rate increase bill to provide funds for the operation of the Post Office Department, putting the President in the position of having little alternative but to veto the pay bill.

AGRICULTURE

Congress passed legislation calling for compulsory inspection of poultry and poultry products, and extended to June 30, 1958, the Agricultural Trade Development and Assistance Act. It failed to act on a humane slaughter bill, although such legislation has been in effect for many years in European countries, and it also defeated a program to establish a minimum acreage allotment for corn and to provide acreage reserve programs for diverted acres and feed grains.

GOVERNMENTAL REORGANIZATION

At a time when much lipservice was being given to economy, one of the greatest failures was a complete lack of Democratic leadership in passing Hoover Commission recommended bills. More than 100 bills implementing these recommendations were introduced this year; only 1 was passed. H. R. 8364, which extends the Reorganization Act, represents the sum total of Hoover Commission-inspired legislation to be enacted. Among the many other bills introduced on which no action has been taken are several of my own, including H. R. 5808 to severely curtail Federal competition with private enterprise.

An Airways Modernization Board was established to assure safe and efficient navigation systems for all civilian and military planes. Legislation also was passed requiring the Atomic Energy Commission to obtain specific authorization of Congress for civilian power proj-

ect appropriations. No action was taken on statehood for either Hawaii or Alaska.

INTERNATIONAL AFFAIRS

I was one of a lonely 61 who voted against authorizing the President to undertake economic and military cooperation with nations of the Middle East when that House Joint Resolution 117 was passed through the support of 355 House Members on January 30. This Mideast doctrine cost the United States an estimated $174 million during its first 4 months, March through July. I opposed the measure because in essence it puts the cart before the horse. It starts out with $200 million then searches for foreign projects to use the funds. That this method does not result in economy or efficiency, was fully documented in my committee's report, United States Aid Operations in Iran issued just a few days before voting on the doctrine in the House.

A much more sensible method is to let countries develop their own projects and bring them to us, together with their justifications so that we can screen them and sponsor only the worthwhile activities, rather than begging them to find some way of using the funds they have available.

The current tense Syrian situation threatens to involve use of United States troops as well as United States funds. I have not regretted my vote.

Congress—my vote 1 of 167 dissenting in the House—agreed to approve amendment of the Anglo-American Financial Agreement to permit deferment of payments on our loan to the United Kingdom.

The United States became a participant in the International Atomic Energy Agency through an act of Congress, and operating authority of the Import-Export Bank was extended for 5 years. Unfortunately, no executive or legislative action was taken on the matter of the status of forces agreement, or on a bill requiring the Armed Forces not to surrender personnel for criminal trial except in special circumstances, in cases where it is determined that the Armed Forces have primary jurisdiction.

An amendment to the Immigration and Nationality Act was passed which eases restrictions mainly on a temporary basis to deal with hardship cases. It permits the admission of alien orphans under nonquota visas who are under 14 years of age, and who are adopted by United States citizens, this program to run under congressional scrutiny for 2 years. It authorizes the Attorney General to adjust the status of about 400 skilled specialists now in this country temporarily but whose services have been deemed necessary, and it authorizes him to admit, after consultation with the Surgeon General, the spouses, parents, and minor children of United States citizens or law residents. It also makes available to the Department of State certain unused nonquota immigrant visas which remain unissued to those for whom intended.

While I frown on liberalization of the act to a point where the floodgates would be let down, this minor adjustment, introduced by Congressman FRANCIS WALTER in the House, and author of the act, appeared to me to be good commonsense. Heretofore, time consuming private bills introduced by individual House and Senate Members have cleared for those who will be covered by the new amendment.

NATIONAL ECONOMY

Lending authority of the Small Business Administration was increased from $375 million to $530 million, and that agency was extended to July 31, 1958. Congress authorized the Secretary of the Treasury to pay up to 3.26 percent on savings bods. Although the House agreed that the cabaret tax should be reduced from 20 to 10 percent, the Senate did not see fit to act on the measure, nor did it take action on a House-approved bill making numerous technical changes in excise-tax provisions of the Internal Revenue Code. Neither body took action on a House-reported bill making changes in income, estate, and gift-tax provisions of the code.

No legislative action was taken, or appears immediately forthcoming, on the Nation's gravest problem, inflation.

NATIONAL DEFENSE—INTERNAL SECURITY

Congress moved with commendable swiftness to protect Federal classified files and sources. Of the 17 who voted against this legislation to correct the Supreme Court's Jencks decision, not one was a Republican.

H. R. 8850, authorizing deferments in certain cases to raise the standards of the selective service, passed the House but was not reported in the Senate. A Senate-passed bill, bringing all Federal employees under the loyalty-security program, received no House action.

NATURAL RESOURCES

The Democrat majority was sufficient to permit passage of a bill calling for a $382.6 million program for the Atomic Energy Commission, including $21 million for reactors to produce electric power. It also increased from $105 million to $140 million the borrowing authority of the St. Lawrence Seaway Corporation, while deferring its interest payments. At the time I proposed private financing of the St. Lawrence Seaway, I predicted their expense estimates were inaccurate and they would be back for more money before it was completed. It now appears doubtful that operating tolls will ever be sufficient to make a significant return of the taxpayers' investment in this waterway which serves only a small part of the country and benefits a few big businesses.

Authorization of TVA expansion through issuance of up to $750 million in revenue bonds was postponed until next year, at which time I will take the floor to oppose it. Only a stubborn and hard-fought battle by Republicans in the House Public Works Committee prevented the Senate-approved Hells Canyon bill from coming to the House. The Senate passed a bill authorizing construction, operation, and maintenance of a $172-million Fryingpan-Arkansas reclamation project in Colorado, but action in the House was held over until next session.

SOCIAL SECURITY, HEALTH, AND WELFARE

Congress approved a $1.9-billion housing program, which increases FNMA borrowing authority to purchase mortgages, lowers downpayments on FHA-insured homes, and provides $350 million for urban redevelopment and slum clearance for 1 year.

It is interesting to note that the Brownson amendment to the Housing Act of 1955 reduced downpayments on FHA loans to virtually the same level as this new bill. Federal Housing Administration officials never used their discretionary authority under the Brownson amendment.

It favorably reported, but took no action, on annuity increases for retired or disabled civil-service workers, nor did it act on a bill which requires the Secretary of Labor to make available to the public financial and other reports filed by labor unions.

VETERANS AND SERVICEMEN

Rates of compensation for service-connected disabilities and for dependency allowance were increased, and the direct home loan and loan guaranty programs for World War II veterans were extended to July 25, 1959. Widows of Spanish-American War veterans once again were passed by; the House approved a pension increase, the Senate apparently plans to take no action at all. The Senate took no action.

CIVIL RIGHTS

When it adjourned on August 30 after the longest session since 1951, the 85th Congress had achieved still another distinction. After months of hearings, debate, political maneuvering and compromise, it passed in its final week, the first civil-rights bill since the Reconstruction days after the Civil War. This bill seeks to protect the individual rights of all our citizens guaranteed by the Constitution, the Bill of Rights and the 13th, 14th, and 15th amendments in those cases where the individual States have shown they are unable or unwilling to do so. Its primary protection is extended to the right of the individual to vote. This Republican inspired measure is the first such legislation enacted in 88 years and is designed to provide the muscle necessary to prevent the 14th and 15th amendments from becoming mere scraps of paper.

Only once, in the Republican 83d Congress, has President Eisenhower been given a cooperative Congress of his own political party. Through that cooperation, $11 billion was slashed from the Truman budget and Federal taxes were cut $7.4 billion a year. In the ensuing years, over $50 billion has been saved the taxpayers as a result of the tax reductions passed by that Republican Congress, and the budget has remained in balance, too.

As your representative I have fought against extravagance, waste, duplication, and big government in committee, on the floor of the House and in the votes I cast for you. Our common objective of economy in government and tax reduction would be nearer were the Republicans in control of Congress with a substantial

majority to back them up and with the powerful committee chairmanships in Republican hands. It is a tough fight to buck that segment of the opposition whose only political philosophy is to spend more money to buy more votes to elect more liberal Democrats. You do not effect an honest reduction of taxes that way, either.

Voting record of CHARLES B. BROWNSON on major legislation of 1st sess., 85th Congress

House rollcall	Description and result	Date	BROWNSON vote	Economy position	Eisenhower position
5	H. J. Res. 117—Authorized President to undertake economic and military cooperation with nations in the general area of the Middle East, expenditures not to exceed $200,000,000 from unexpended foreign-aid funds and authorized use of United States Armed Forces if deemed necessary by the President. Passed 355 to 61.	Jan. 30	Nay		Yea.
19	H. Res. 190—Requested President for certain information pertaining to the 1958 budget. Adopted 220 to 178	Mar. 12	Yea	Yea	
23	H. R. 4901—To establish a minimum acreage allotment for corn and to provide acreage reserve programs for diverted acres and feed grains. Defeated 217 to 188.	Mar. 13	Yea		Yea.
	H. R. 6287—Labor and Health-Education-Welfare appropriation. Various amendments to reduce appropriations by—				
37	$30,000—Adopted 286 to 126	Apr. 4	Yea	Yea	
38	$204,000—Adopted 241 to 171	Apr. 4	Yea	Yea	
39	$46,000—Adopted 246 to 169	Apr. 4	Yea	Yea	
40	$136,000—Rejected 275 to 137	Apr. 4	Yea	Yea	
41	$442,000—Adopted 214 to 205	Apr. 4	Yea	Yea	
42	$12,186,000—Adopted 220 to 200	Apr. 4	Yea	Yea	
43	$1,500,000—Adopted 253 to 167	Apr. 4	Yea	Yea	
44	$263,800—Adopted 342 to 77	Apr. 4	Yea	Yea	
45	$346,000—Adopted 217 to 201	Apr. 4	Yea	Yea	
47	$288,000—Adopted 214 to 205	Apr. 4	Yea	Yea	
48	$1,327,000—Rejected 285 to 130	Apr. 4	Yea	Yea	
49	$1,482,000—Rejected 207 to 206	Apr. 4	Yea	Yea	
50	$50,000,000—Rejected 231 to 185	Apr. 4	Yea	Yea	
59	S. J. Res. 72—Approval of an amendment of the Anglo-American financial agreement relative to deferment of certain payments. Passed 218 to 167.	Apr. 10	Nay	Nay	Yea.
64	H. R. 6871—State, Justice, Judiciary appropriation amendment to reduce by $7,039,958 contributions to international organizations. Rejected 205 to 167.	Apr. 17	Yea	Yea	
74	H. R. 7441—Department of Agriculture appropriation. Amendment to suspend operation of soil-bank program at end of fiscal 1957 and to delete provision of $500,000,000 for 1958 program. Adopted 192- to 187.	May 15	Yea	Yea	
77	H. R. 7590—Legislative branch appropriation. Motion to recommit with instructions that appropriation of $7,500,000 for property, construction, and equipment of 3d House Office Bldg. be stricken. Rejected 206 to 176.	May 22	Yea	Yea	
78	On final passage of H. R. 7590—Passed 279 to 93	May 22	Nay	Nay	
91	H. R. 7665—Department of Defense appropriation. Motion to restore $313,000,000 of $2,500,000,000 cut, for Army research and development, naval airpower, Air Force aircraft, and related procurement. Rejected 242 to 151.	May 29	Yea	Nay	Yea.
112	H. R. 6127—Civil rights bill—Motion to recommit to include trial by jury amendment. Rejected 251 to 158	June 18	Nay		Nay.
113	H. R. 6127—Civil rights bill—Final passage. Passed 286 to 126	June 18	Yea		Yea.
115	H. R. 7221—Supplemental appropriation. Motion to recede and concur with Senate amendment 15 to provide $14,000,000 for initiation of Federal flood insurance program. Rejected 218 to 186	June 18	Nay	Nay	
119	H. R. 6974—To extend for 1 year the Agricultural Trade Development and Assistance Act of 1954. Passed 345 to 7.	June 21	Yea		Yea.
122	H. R. 7963—Small Business Act of 1932, making it a permanent agency, increasing authority for loans to small business, and reducing interest rates on loans. Passed 393 to 2.	June 25	Yea		Yea.
124	H. R. 6287—Motion to recommit Health, Education, Welfare conference report to committee. Defeated 321 to 73.	June 26	Nay	Yea	
127	S. 1428—Senate, furnishings and furniture for new Senate Office Bldg. Motion to recommit with instructions to report bill back specific figures on cost of projects involved. Rejected 231 to 135.	June 27	Yea	Yea	
128	S. 1429—Improvements in present Senate Office Bldg. Motion to recommit with instructions to report bill back with specific figures covering costs. Rejected 216 to 148.	June 27	Yea	Yea	
148	S. 2130—Foreign-aid authorization bill. Motion to recommit. Rejected 227 to 181	July 19	Yea	Yea	Yea.
149	S. 2130—Foreign-aid authorization. Final passage. Passed 254 to 154	July 19	Nay	Nay	Yea.
151	H. R. 2474—Postal pay raise, increasing basic salary of postal workers. Passed 379 to 38	July 23	Yea		Nay.
154	H. R. 1—Federal aid to school construction. Motion to strike out the enacting clause. Agreed to 208 to 203	July 25	Yea	Yea	Nay.
175	H. R. 9131—Supplemental appropriation. Recommital motion to reduce TVA funds by $9.7 million. Rejected 244 to 158.	Aug. 7	Yea	Yea	
176	H. R. 9131—Supplemental appropriation. Final passage. Passed 330 to 75	Aug. 7	Nay	Nay	
213	H. R. 6127—Civil-rights compromise bill. On ordering previous question. Agreed to 274 to 101	Aug. 27	Yea		Yea.
214	H. R. 6127—Civil rights. On final passage. Passed 279 to 97	Aug. 27	Yea		Yea.
215	H. R. 7915—To protect FBI and other Federal records. Passed 351 to 17	Aug. 27	Yea		Yea.
217	S. 2792—Amending the Immigration and Nationality Act to permit admission of certain all Passed 293 to 58.	Aug. 28	Yea		Yea.
220	H. R. 9302—Foreign-aid appropriation bill. Passed 194 to 122	Aug. 30	Nay	Nay	Yea.

Benefits Under the Sugar Act

EXTENSION OF REMARKS
OF

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, August 30, 1957

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Hon. True D. Morse, Under Secretary of Agriculture, and President, Commodity Credit Corporation, before Denver Agricultural and Livestock Club, Denver, Colo., September 20, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BENEFITS UNDER THE SUGAR ACT

(Address by True D. Morse)

During much of the 26 years that I spent in managing farms, I worked with farmers and ranchers growing sugar beets here in the West. Some of the farms and ranches were in this Denver area—on north through the productive Greeley section, into Wyoming. One sugar beet farm was near Scotts Bluff, Nebr.—and I was working with other farmers near Pueblo, Colo., and on east to Kansas.

I want therefore to speak of sugar beets that are so vital to the economy of many areas of the West—and of the Sugar Act that is not only important to farmers but to all 171 million consumers in the United States.

The Sugar Act is considered sound by Congress. Each time it is renewed by practically a unanimous vote—Senators and Congressmen representing consumers voting solidly along with those representing farm and ranch areas.

The title of the Sugar Act sets forth four specified purposes:

(1) To regulate interstate and foreign commerce;

(2) To protect the welfare of consumers of sugar;

(3) To protect the welfare of those engaged in the domestic sugar-producing industry; and

(4) To promote export trade of the United States.

The legislation gives no one of these objectives precedence over any of the others.

The Department of Agriculture, in administering the act, is required to apply the legislation to both foreign and domestic commerce and to administer it in a manner that will protect the welfare of consumers as well as the welfare of those engaged in the domestic sugar-producing industry.

National policy: The United States Senate Committee on Finance under the chairmanship of Senator HARRY F. BYRD, recommending extension of the Sugar Act, said:

"For many years it has been the policy of the United States Government for defense and strategic reasons to preserve within the United States the ability to produce a portion of our sugar requirements. This has been done because sugar is an essential and vital food product needed by American consumers, the supply of which on a worldwide scale has been marked by periods of alternating scarcity and surplus.

"A large portion of the world's sugar production is grown in tropical countries with essentially one-crop economies, where cheap labor is abundantly available. An additional large portion is distributed among the majority of the countries of the world which, like the United States, provide protection to their sugar industries. In these circumstances, it is unlikely that a significant amount of sugar would be grown in the continental United States if American producers had to compete on the open world market

with sugar produced with cheap tropical labor."

The price insurance of sugar beet contracts that farmers get in their agreements with processors made a lasting impression on me, as we were able to use sugar beets to pull farm families through the terrible depression days of the thirties. It is a fine example of mutually beneficial contracts between farmers who want or need sure income at an insured price and sugar beet companies who want to be assured of the volume of beets they need to operate their factories and to supply consumers.

In more recent years of greater prosperity, we have also seen the same insistent demand for sugar beet acreage, as young farmers and new farmers—or those with debts—have wanted dependable income such as comes from a contracted crop. This demand has been very noticeable as veterans and others took land under new irrigation projects and needed sure income to meet fixed water costs, taxes, and other obligations.

With the renewal of the Sugar Act of 1956, provision was made so the sugar production of our farmers—both cane and beet growers—could expand as consumption goes up. Now we are able to allot some acreage to veterans and others who want the price insurance of sugar-beet contracts.

In the establishment of proportionate shares for farms, the Secretary of Agriculture is required under the Sugar Act, insofar as practicable, to protect the inteests of new producers and small producers and the interests of producers who are cash tenants, share tenants, adherent planters, or share-croppers.

Under the Sugar Act program, the Secretary is given a great deal of discretion in the imposition of restrictive regulations. While the act itself imposes quotas on all producing areas on the quantity of sugar which may be distributed by them each year, allotments of these quotas to processors, and the imposition of acreage restrictions on farmers, depend upon the Secretary's appraisal of the need for such regulations.

Actually prior to 1955 restrictive acreages were undertaken in the beet area only in 1939 and 1941. During this period the reduction in the number of farms and the increases in the average acreage per farm throughout the beet-sugar industry were reflections of the increasing mechanization of sugar-beet production.

Mechanization, now virtually complete for the harvest operation, together with the tremendous strides recently made in increased yields per acre, accounts for the outstanding record of the domestic sugar-beet industry in producing sugar with so few man days of labor.

The expensive, specialized machinery required can be utilized most efficiently on farms where there is an adequate acreage of sugar beets. Under the restrictive proportionate share program, the acreage per farm was cut rather drastically in California, the Red River Valley, and the Pacific Northwest in 1955, as it had been earlier under the program of 1941.

We are now in the third successive year in which the acreage of beets has been restricted on individual farms under a proportionate share program. However, under the Sugar Act as renewed in 1956, acreages are being expanded. It means more freedom for farmers to produce—a major objective that should be a key part of every farm program.

A dependable supply of sugar at relatively stable prices is among the reasons why all who use sugar benefits by the Sugar Act. It benefits every family—every kid who feasts on an ice cream cone or a candy bar—the older folks who put sugar in their coffee or on their breakfast food. Yes, sugar goes into our daily bread and makes possible delicious cakes and pastries—and is an important food to provide energy.

Sugar is one of our most easily assimilated energy foods—and one of the cheapest. The housewife buys about one-third of our sugar, industry buys the rest for a great variety of uses, from bakery goods to pharmaceuticals.

The Sugar Act gives consumers the protection of assured supplies at stable prices. This is particularly important during periods of world tension which creates shortages and sends prices soaring on the so-called world market, periods such as those following the Korean crisis and the explosive Suez incident of last year. These periods dramatize the importance of the sugar program to American consumers, but just as important to American consumers, are the continuous week-to-week and month-to-month benefits accruing to them in less dramtic periods.

Evidence of the high degree of stability which the Sugar Act has brought about in the domestic market is indicated by the fact that during the postwar period the range between high and low monthly prices each year has been nearly twice as great in the world market as in the domestic market. During 1956 and the first 7 months of 1957 the range has been nearly 3 times as great in the world market as in the domestic market. Stability of prices is of major benefit to industrial users and every housewife as well as sugar producers.

The maintenance of healthy sugar producing industries in widely separated areas increases the probability of adequate supplies in peace and in war.

Senator WALLACE F. BENNETT, before the United States Senate on February 7, 1957, said:

"In reaction to recent international events, the price of raw sugar in the so-called world free market in a brief period of 60 days * * * increased 100 percent above the level of prices prevailing in this market for the last 3 years. * * *

"In contrast, United States raw-sugar prices, at the highest point reached during this 60-day period, were only 4 percent above prices at the beginning of this 2-month period, and are today even lower than they were at the start of this period. * * *

"The important thing to note is that, despite the sudden increase in demand in our market above normal expectations, plenty of sugar was available in this country at all times. * * *

"Taking the 1947–49 price as a base—which is the base period used for general price comparisons, and which is now used in the Sugar Act—1956 prices were only 4 percent above those in the base period."

We do not produce all the sugar used in the United States. Under the act we obtain from foreign countries—especially Cuba—about 45 percent of the sugar we need. This is a major reason for concern that there be a sound and time-tested sugar program. It was with some alarm that we saw, within the past 12 months, the surplus sugar of Cuba and other foreign countries disappear.

United States farmers now get more beet acreage under the amended Sugar Act. For the first time since 1947 domestic sugar producers have been permitted by law to participate in supplying the rising domestic sugar demand—to grow with the growth of their own country.

The national proportionate share acreage for farmers this year is 12 percent greater than a year ago—950,000 acres as compared with 850,000 acres last year. These extra acres were thus planted to a crop for which there is now an expanding market. They did not need to be put in the soil bank to keep them from adding to surpluses. The crop may set a new alltime high record production of well over 2 million tons.

When the Secretary of Agriculture finds it necessary to make additional sugar supplies available, 55 percent of these added supplies come from domestically produced sugar supplies, not subject to foreign influence. And in the case of the supplies drawn from the mainland sugar-beet and sugarcane areas, the increased supply becomes available for consumption the very minute the Secretary decides it is needed.

The sugar program is well adapted to a deficit crop for which there are fixed marketing channels for the raw agricultural product and a very uniform pattern of uses for the finished commodity.

The present administration recommended in 1955 that the law be modified to provide that domestic areas again share in the growth of the United States sugar market. While only a short period of time has elapsed since the law was changed, events already have demonstrated that these 1956 amendments to the Sugar Act are sound and in the interest not only of domestic sugar producers but consumers as well.

We are fortunate in having an able administrator in Mr. Lawrence Myers, who has served in that capacity for the past 9 years. Because of his ability, he was elected to serve a term as Chairman of the International Sugar Council.

As a final word on sugar, I take this opportunity, as I speak here in the West, to congratulate the beet-sugar industry upon the manner in which it has met the production and marketing demands placed on it as a result of the unusual and unexpected circumstances which have existed since the fall of 1956.

The membership of the Denver Agricultural and Livestock Club and those you so effectively serve from this major livestock and agricultural center of the Mountains and Plains States have broad interests which I wish to discuss briefly.

Cattle prices are much higher and the 5-year outlook is good. This deserves emphasis in this great cattle country. Feeder cattle have been moving at $3 to $4 per hundredweight above a year earlier and little seasonal decline is expected this fall. Cattle numbers are expected to decline further this year—and in the immediate years ahead. This should mean a further strengthening of the cattle market.

The United States Department of Agriculture economists expect favorable prices for meat animals until the summer of 1958. After that more hogs may be coming to market.

There is growing confidence in lamb and wool prices for the future. Sheep numbers are about stable. Government stocks of wool should be liquidated by the end of this year.

The price outlook for turkeys is improving.

There is steady progress and improvement in agriculture, although conditions are not generally satisfactory.

United States realized net farm income last year was 4 percent above 1955—the first peacetime year in which such net farm income increased since 1947. On a per-farm basis the increase was 7 percent.

For the first half of 1957, realized net farm income was at a rate of approximately $12.1 billion—2½ percent higher than in the first half of 1956. Farm income is increasing for the second consecutive year.

Exports of farm products, after disastrous declines of 30 percent prior to 1953, are now at record high levels.

Wheat carryover was cut last year by 128 million bushels—and surpluses will be reduced further in this marketing year.

Cotton exports during the past marketing year were pushed up to the very high level of 7.5 million bales—and the surplus is being reduced.

Total government-owned surpluses are being reduced. Commodity Credit Corporation investments in price support were about $7.6 billion on May 31, 1957, a net reduction of about $900 million since May 31, 1956, and

a reduction of about $1.3 billion below the peak holdings of February 1956.

An all-time high in total agricultural assets was again set January 1, 1957—over $176 billion. Assets of farmers are going up faster than debts. Only about 1 farm of each 3 has a mortgage. Last year assets of farmers increased $8.6 billion—debts increased $600 million.

Land values continue to go up each year. A new alltime high in farm values per acre was again set in March 1957—up 7 percent during the previous year.

Farm ownership is at an alltime high. There are fewer tenants as compared to owners than ever before.

Never before has there been so much soil and water conservation.

Yields per acre for crops and production per unit of livestock continues to be pushed up.

Our goal is expanded production of the crops that farmers want to grow. Market expansion is being emphasized.

This year long-staple cotton acreage was almost doubled after growers got Congress to change the law to allow price supports to be reduced from 90 to 75 percent of parity. The surplus was sold and now they can grow more of this high value crop.

The Sugar Act was amended, as I have explained—now farmers are able to grow more of this cash crop.

Over 94 percent of farms have electricity.

Farm are better equipped and have better homes than in former years. There are growing numbers of tractors and larger amounts of modern equipment.

Family farms continue to dominate. Large scale farms are about 4 percent of all commercial farms—about the same as 30 years ago.

I have deliberately listed primarily evidences of strength and progress in the agricultural economy. There are, of course, problems. Among the most difficult is the persistent advance in costs.

The primary surplus problem is in the six "basic crops" which continue to be shackled by unworkable laws.

Strength in American agriculture is being developed in an era of peace.

For the Nation as a whole the total of businesses and services pushed above the $400 billion mark during the latter part of 1955. It went on up to $424 billion in 1956 and is moving on up to even higher levels this year. This prosperity gives stronger markets for farm products.

This is a great era of peacetime progress.

Small Business and the Small Business Administration

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mr. HILL. Mr. Speaker, there is abroad in the land an assertion that the welfare of independent business in this country is a political issue. The accusation has been made and no doubt will be continued to be made that this administration is not doing everything that may possibly be done to foster our free competitive enterprise system. This type of argument is to me without any foundation based on fact.

There are approximately 4½ million business enterprises in the United States. Each of these businesses, no matter how small or how large, is an integral part of the trade and commerce of our country.

The smallest business enterprise is as important within its sphere of activity as is the largest business enterprise. The underlying fear of many is that our largest business enterprises will through the power economically inherent in such enterprises eventually control all trade and commerce in our country.

This is not a fancy or something which we can say "won't happen here," but it is a possibility with which we must now and always reckon.

It was in recognition of these facts of business life that the Sherman antitrust law was enacted. It was in recognition of these facts that the Federal Trade Commission Act, which established the Federal Trade Commission, the Clayton Act, the Robinson-Patman Act, and other regulatory acts of Congress were placed in the body of our antitrust-law structure.

It is not a question of large or small, but the question is, Shall our national policy be that of constantly strengthening our free enterprise system in order that every person who desires to engage in business in these United States has an equal opportunity. Since 1890 the Federal Government, regardless of the party in power, has answered the foregoing question in the affirmative. We must and we shall continue to use every resource at our command to strengthen and maintain the capitalistic system of free enterprise. The Congress of the United States as a coordinate branch of our Government has always played an important part by taking the initiative when danger to our economic well-being was threatened.

The Eisenhower administration by aggressive action has built up a substantial and impressive record of antitrust enforcement. Through the President's Cabinet Committee on Small Business the Small Business Administration and other agencies of our Government, this administration has demonstrated by act and deed its interest and concern in the small and independent enterprises of our Nation. The administration, after full consideration of the Small Business Administration's contribution, recommended that the Small Business Administration be made a permanent agency of our Government. The record is impressive and has been made with a total lack of partisanship.

THE CONGRESS AND SMALL BUSINESS

The Congress has recognized that the basic problem is concerned with the health and welfare of the small business concerns of this country; and were it otherwise, we would have no antitrust laws and the Congress would not have established laws and agencies concerned with the welfare of small business. I think it is worth repeating, as I have stated in former speeches, that the Small Business Administration is the third and most wholesome attempt of the Congress to carry out the ultimate for which we strive. The time, the study, and the labors of the Congress have not quite achieved, however, the desired goal of establishing a permanent agency dedicated to the enhancement of opportunity for small business. This we hope will be achieved during the 2d session of the 85th Congress. Consequently, there is no political issue involved; it is simply a question of the Congress fulfilling its obligation to small and independent businesses and collaterally to our free competitive enterprise system.

A PERMANENT AGENCY FOR SMALL BUSINESS

During the closing days of this session of Congress, the Members of the House of Representatives overwhelmingly expressed their desire to assist the small business concerns of the Nation by voting 392 to 2 to make the Small Business Administration a permanent agency. This bill will not be acted upon by the Senate before the end of this session, but I am reliably informed that it will be given early consideration when the Congress reconvenes in January. I am confident that the Senate will vote just as overwhelmingly to provide assistance so vital to small business.

I have personally urged such action since the inception of the Small Business Administration in 1953, both on the floor of the House and when testifying before congressional committees. The majority of my colleagues on the Select Committee on Small Business have joined me in this plea for a permanent small business agency. In our own minds and in the minds of the small-business men across the country there exists no doubt that such an agency is essential to the well-being of our economy.

The reasons for the establishment of the Small Business Administration and for its continuation on a permanent basis are well known to all Members of Congress. More than ever in this era of rapid technological change, of constantly increasing demand for consumer goods and of vast purchases by the Federal Government itself there have been tremendous pressures exerted on the competitive structure of our economy. For 20 years forces have developed which threaten the existence of the small-business man who, as I have said, is the basis of our competitive economy.

Mr. Speaker, I have said that these forces exist and are extremely active, but I have not said that the battle to preserve our economy has been lost. Our business population continues to increase, and profits are being made. Many thousands of small-business men retain the incentive to produce and distribute for civilian and defense markets. They are still willing to take risks, and when given equal opportunity, they are strong and successful competitors.

THE FEDERAL GOVERNMENT AND SMALL BUSINESS

It is extremely important, however, that the Federal Government do everything possible to alleviate the position of small business since the Federal Government itself has been partially responsible for exerting pressure on the competitive position of small business. By responsibility I mean that two wars have resulted in heavy tax burdens, in accelerated depreciation of assets connected with production for defense, in increasing dependence upon a thorough knowledge of technological developments and

in Federal Government procurement policies and procedures, in rapidly changing civilian markets, in heavy demands upon the credit sources of our Nation and in a host of other factors. I freely admit, of course, that such responsibility has been in many cases unavoidable. But I also believe that such developments have been detrimental to small business and, particularly, that the Federal Government can and should do something about it.

These areas of difficulty for small business have, as I said, been prevalent for many years and will presumably continue to affect their well-being. I wish to comment briefly at this time on the developments which have taken place in two areas of extreme importance to small business; namely, tax relief and assistance provided through the various programs of the Small Business Administration.

AN EQUITABLE TAX STRUCTURE FOR SMALL BUSINESS

The members of the House Small Business Committee have long advocated that the most important step to be taken by Congress to provide relief for small business so that they may have an equitable opportunity to compete is to reduce their tax burden. To this end the minority members of the Small Business Committee introduced in this session of Congress an omnibus small business tax bill. To date there have been over 20 tax bills introduced, identical to H. R. 5631, which I introduced.

It is our strong feeling that tax adjustments will do much to solve the financing problem of small firms, that the number of mergers will be reduced, that the number of business failures will decline and that small firms will have greater incentive and greater resources with which to compete against the larger members of the business community.

The minority members of the Small Business Committee have also introduduced the administration proposal to provide tax relief to small firms in four particular areas. The bills follow the President's suggestions which are necessarily predicated upon the present budget situation.

I earnestly hope that the Ways and Means Committee of the House will give most serious consideration to the proposals contained in all small business tax bills submitted during the 1st session of the 85th Congress. It is my understanding that the Ways and Means Committee will commence its tax hearings in the near future.

SUBCOMMITTEE NO. 2 OF THE HOUSE SMALL BUSINESS COMMITTEE

Mr. Speaker, during this session of Congress, Subcommittee No. 2 of the House Small Business Committee, with the Honorable ABRAHAM J. MULTER, of New York, as chairman, investigated in great detail the operations of the Small Business Administration. The Honorable SIDNEY R. YATES, of Illinois, the Honorable TOM STEED, of Oklahoma, the Honorable R. WALTER RIEHLMAN, of New York, and the Honorable HORACE SEELY-BROWN, JR., of Connecticut, are the other members of this subcommittee. The most thorough examination made by this subcommittee revealed some areas in which improvement could be made in program administration. It showed other areas in which additional legislation was desirable. In its overall operations, however, it was found that a good job was being done and that positive and essential assistance was being rendered to the small firms of our economy. I wish to review briefly the operations of the Small Business Administration.

THE SMALL BUSINESS ADMINISTRATION RECORD

The Small Business Administration was established on July 30, 1953, and, after a brief period of organization and establishing policy, began its financial-assistance program on September 30, 1953.

During the subsequent 4 years, as of July 31, 1957, the agency had approved some 7,398 small-business loans, totaling $341,009,000.

This sum represents credit that this agency of the Federal Government has made available to qualified small firms of all types and in all sections of our country. In every case these firms were unable to obtain private credit. They came to the Government for assistance only as a last resort, and many of these firms would have had very hard going, indeed, had they not been able to get prompt assistance. As my colleagues know, it has always been the desire of Congress, and is so expressed in the Small Business Act, that a borrower first attempt to secure credit from private sources before going to the Small Business Administration.

During the fiscal year just ended, the Small Business Administration approved 3,536 business loans, totaling $159,094,000, nearly double the number of loans approved the previous fiscal year.

It is more than commendable that two-thirds of the Small Business Administration's loan approvals are made in participation with banks. By adhering closely to the policy of cooperating with the banks, the agency helps the individual businessman establish a line of private credit in his home city.

REGIONAL SMALL BUSINESS ADMINISTRATION OFFICES OF PRIME IMPORTANCE

Of importance, also, is the fact that most of the loan applications to the Small Business Administration are now handled entirely by the agency's regional offices, under the guidance and supervision of the Washington officials. For the most part, only the larger loan applications are approved in Washington. Through this policy of delegating responsibility to the regional offices, the agency is able to act on applications for loans with a minimum of paperwork. Our committee has consistently urged such delegation of authority and that every means be utilized to expedite processing of loan applications.

DISASTER LOAN PROGRAM

The Small Business Administration also has the responsibility for making disaster loans to help homeowners and businesses rehabilitate their property when a disaster strikes. While not confined strictly to small business, this program has been of immeasurable assistance to virtually every area in the country.

Here, again, the agency has made an excellent record. On a cumulative basis, through June of this year, the agency had approved 6,149 disaster loans for $66 million. I know we are all familiar with the personal and property losses resulting from hurricanes on the east coast 2 years ago and only recently with the hurricane in Puerto Rico and floods in Kentucky, Virginia, West Virginia, Louisiana, and Texas. All those disasters resulted in heavy losses which the Small Business Administration was able to alleviate through its disaster-loan program.

The Small Business Administration also makes disaster loans to aid firms which suffer economic damage as a result of prolonged drought. So far it has approved 143 drought disaster loans totaling $3 million.

GOVERNMENT CONTRACTS FOR SMALL BUSINESS

Another important activity of the Small Business Administration is that of helping small firms get a fair share of Government contracts.

During the fiscal year ended on June 30, 1957, the Small Business Administration made impressive progress in its programs of having suitable Government purchases set aside for exclusive award to small-business firms. Through cooperative action by the Small Business Administration and the Government purchasing agencies, some 12,000 procurements totaling $744 million were restricted to small firms. Since the beginning of the agency, procurements estimated at more than $1,800,000,000 have been set aside for small-business firms. The amount set aside for small business in fiscal year 1958 is expected to be appreciably higher than it was this past year. Congress has expressed many times its insistence that small business receive a fair share of Government contracts. I feel that the Small Business Administration set-aside program is a most important tool in accomplishing this objective.

The Small Business Administration also provides small firms with procurement counseling. In its counseling service, the Small Business Administration renders assistance to individual small-business owners and managers in determining what products or services their firms can supply to the Government and which agencies and purchasing offices are their prospective customers.

Explanation to the businessman is made concerning how and where they can obtain Government specifications for the particular products or services, and how to have their firms listed on the appropriate bidders lists. They also provide a wide range of other services—advising small firms how they can become registered as planned wartime materiel suppliers, helping them resolve difficulties with Government procurement officers, assisting them in having their products listed on qualified products lists, helping them obtain financing on Government contracts, and informing them of Government purchases for which additional suppliers are needed.

WORK OF SMALL BUSINESS ADMINISTRATION FIELD OFFICES

Field offices of the Small Business Administration handled more than 30,000 cases of procurement-assistance counseling and other case assistance to small firms during fiscal year 1957, as compared to about 21,000 cases during fiscal 1956. In addition, about 10,000 small firms were assisted to bid on specific procurements, compared to about 5,500 during the previous fiscal year.

To help small-business firms obtain subcontracts, Small Business Administration field offices through June 1957 had contacted about 5,000 prime contractors to develop subcontract opportunities and had made over 7,000 referrals. This compares to about 3,100 contacts to develop subcontract opportunities and approximately 3,100 referrals in the entire fiscal year 1956.

When a small-business concern requests assistance in obtaining Government business, Small Business Administration regional offices refer procurement opportunities to the firm until it has had time to obtain listing on the appropriate bidders' lists of Government purchasing installations. More than 51,000 such referrals have been made to assist small-business firms.

SMALL BUSINESS ADMINISTRATION BUSINESS OPPORTUNITY MEETINGS

The Small Business Administration has also sponsored a series of business-opportunity meetings for small firms in many cities throughout the country. These meetings, held in cooperation with other Government agencies, chambers of commerce, and trade associations, provide a means whereby the manufacturer or supplier can learn at firsthand what articles the Government is purchasing that he might supply. During 1956, 21 such meetings were held, and the prospects are that an even larger number of meetings will be held this year.

Estimates indicate that approximately 3,000 small-business owners and managers annually attend these business-opportunity meetings to learn how to do business with the Government.

SMALL BUSINESS ADMINISTRATION CERTIFICATES OF COMPETENCY

From the start of operations in August 1953 through June 30, 1957, the Small Business Administration had issued 317 certificates of competency, covering procurements valued at $38 million. These certificates are issued to aid small firms whose low bid on a Government contract has been rejected on the grounds that the firm lacks the necessary financial and productive capacity. Of course, a certificate is issued by the Small Business Administration only when careful study by the Agency indicates that the firm actually is capable of performing the contract. Once such a certificate is issued, procurement officers are directed under the law to accept it as conclusive, as far as financial and technical requirements of the contract are concerned.

EXAMINATION OF GOVERNMENT PROCUREMENT POLICIES

A Task Force for Review of Government Policies and Procedures, established in line with the recommendation of the President's Cabinet Committee on Small Business, is receiving the full cooperation of the Small Business Administration.

This agency, along with the Bureau of the Budget and General Accounting Office, is making available to the task force specific examples of inequities, inconsistencies, and complexities in Government procurement procedures.

SMALL BUSINESS ADMINISTRATION SPECIAL COURSES IN MANAGEMENT

The Small Business Administration, in cooperation with colleges and universities throughout the country, arranges special courses in administrative management for proprietors of small firms.

Through June of this year more than 8,300 businessmen and women had attended management training courses cosponsored by the Small Business Administration. Since the program began, 264 educational courses have been conducted in cooperation with 100 educational institutions. This last fiscal year the agency cosponsored 109 more courses than in 1956.

THE SMALL BUSINESS ADMINISTRATION PRODUCTS ASSISTANCE PROGRAM

The Small Business Administration also has a products assistance program designed to acquaint small companies with new products and inventions which may be of interest to them in diversifying into additional or alternate products, to assist inventors in finding buyers or producers for their inventions, and to furnish information to small producers about current or newly developed manufacturing methods and processes.

POLICY REVIEW OF SMALL BUSINESS ADMINISTRATION ACTIVITIES

The Small Business Administration programs and policies are constantly under review by the agency's two advisory groups, the National Council of Consultants, and the National Board of Field Advisers. This is a 2-way street, however, for members of the National Council and the National Board of Field Advisers provide the Small Business Administration with their thinking on the problems affecting small business throughout the entire country. The National Council of Consultants will convene in Washington on September 26, 1957, for its sixth meeting, and the Council members have been invited to attend the President's Conference on Technical and Distribution Research for the Benefit of Small Business which begins on September 23 and continues through September 25.

The President's Conference is being held to assist small manufacturers, wholesalers and retailers in the use of modern methods and techniques for developing and improving their products and increasing sales. The conference has been planned and will be conducted primarily by leaders from business, research and education, with the cooperation of the Small Business Administration and the Department of Commerce.

CONCLUSION

In conclusion, I repeat, Mr. Speaker, the House of Representatives voted on June 25, 1957 to make the Small Business Administration a permanent and independent agency. It is imperative that the problems of small firms continue to be attacked through assistance in meeting the need for credit and in supplying information and assistance in areas of Government procurement and production and technical matters. Additionally, the Small Business Administration must continue to serve as a spokesman for small business within the Federal Government itself. The intent of Congress with respect to small business can never be fully carried out unless and until the Small Business Administration achieves the status of permanency.

Meeting the Educational Challenge of the Exceptional Child—A Proposed Bill and a Program To Train Needed Teachers

SPEECH

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 28, 1957

Mrs. SULLIVAN. Mr. Speaker, since this 1st session of the 85th Congress is so near adjournment that no new legislation introduced now could possibly be considered in these final hours, I should perhaps apologize to the membership for asking for this special allotment of time today in order to discuss a bill which has not yet even been introduced.

On the other hand, this proposed measure deals with a matter of such really desperate concern to so many millions of American families and to so many charitable and educational organizations that I feel I am wafranted in bringing it to the attention of the House now as a basis for discussion and analysis and study over the coming months of the congressional recess.

For one thing, I know that a large number of Members share my interest in this urgent problem of meeting the educational challenge of the so-called exceptional child, and I invite their review of the approach which I have attempted to develop. I have been working on this proposal for many months and still have 1 or 2 details to iron out but I believe I can do that in time to introduce the bill itself before we adjourn this week. In the meantime, I would like now to outline its general features and provisions.

Subsequently, during the recess period, until the 2d session convenes in January, I am hopeful that this proposal will receive the widest possible discussion and analysis among all of the many groups directly interested or concerned. Then, if it is determined to be as workable as I believe it can be, I hope we can obtain prompt action on the bill early next year, in time to put it into operation for the last half of this present fiscal year.

During the recess, I would be more than pleased to receive any comments or criticisms on the bill from interested Members of the House and Senate, and from any other individuals or groups concerned with the need for providing more

adequate educational opportunities for exceptional children.

COVERS ALL AREAS OF EXCEPTIONALITY

While there is nothing revolutionary or unprecedented in the approach my proposed bill would take, I am informed that the bill will be, when introduced, the first and only bill before Congress to establish in one single, broad, unified Federal grant program a plan to help train urgently needed teachers in every major category of exceptional children.

Most of the congressional activity in this respect up to now has been directed at the problems of educating the mentally retarded child. Thanks to the pioneering work in this field by the House Appropriations Subcommittee for the Department of Labor and the Department of Health, Education, and Welfare, the subcommittee headed by Congressman JOHN E. FOGARTY, of Rhode Island—one of our great humanitarians in the Congress—we now have under way through the Office of Education an extensive research program on teaching techniques for helping mentally retarded children.

In addition, both last year and this year the Senate has passed bills to establish a scholarship and fellowship program for training teachers in this same field of teaching the retarded. Furthermore, Mr. FOGARTY'S subcommittee this year has called for some new thinking by the Office of Education on the best methods of providing better educational opportunities for children with speech and hearing defects—another sizeable group of exceptional children; in fact, I think it is the largest single category of such children.

The bill which I plan to introduce in the next few days, on the other hand, will cover not only these groups but all other major categories of what the educators call exceptionality. It will provide a program of Federal scholarships and fellowships to individuals, and grants to colleges and universities to stimulate the training of some of the many thousands of specially equipped professional people needed in all of these fields, as teachers in the elementary and secondary schools, as supervisors of such teachers, and, at the college level, as teachers of advanced education courses and as researchers in the areas of exceptional children.

THE PROBLEM FACED BY THE EXCEPTIONAL CHILD IN SCHOOL

Mr. Speaker, while all of us are endowed with individual qualities and characteristics which distinguish us from each other, most of us are blessed with a kind of normal averageness, if that is the word, of physical appearance and mental capacity which enables us from childhood on to submerge comfortably in the group—in the crowd—if we so desire, and travel life's road at a comparatively easy pace. Most of the institutions with which we come in contact, the tools we must use, the clothes we wear, the homes in which we live, the specifications for most jobs, and the schools in which we learn, particularly the schools, are geared or tailored pretty much to the norm. I said we are blessed with this averageness because certainly as children we shrink at the idea of being visibly or demonstrably different.

But while most children seem to fit a comfortable pattern, others, a very select few, are touched by God with such great gifts of mind and perception as to stand out for their brilliance; and still others, millions of others, are chosen for reasons known only to God for the special testing and trial of another form of differentness, that is, in having to shoulder physical, mental, or emotional handicaps or disabilities.

To romanticize this situation, it is easy to think that the gifted child has everything in his favor with the world as his oyster, and the handicapped child inevitably has some inner fire and drive to enable him to overcome his physical limitations and achieve the greatness which has come to so many in similar circumstances, great poets, musicians, teachers, physicians, and so on, who were handicapped and who nevertheless achieved great things in spite of, if not because of, those physical handicaps.

But let us not forget that children do not suck knowledge out of their thumbs. They must be taught and often it is a painstakingly difficult—incredibly difficult—and skilled task to teach some unfortunate children anything, to teach others the minimum of those things they must learn and know in order to live useful lives, and to teach still others all they can learn profitably.

WASTAGE OF HUMAN RESOURCES

In this respect, the greatly gifted child and the handicapped child share some common and often serious problems in the educational process and thus are placed together by educators under the heading of exceptional. For the procedures set up to teach the so-called normal or average child do not begin to reach the educational needs of the different child—the exceptional one. As a consequence, the exceptional child—gifted or handicapped—is robbed of some of his educational birthright.

Some millions of children of school age are not in any school at all because of the existence of this problem. Some of these receive some help from the school system, but the problem is enormous, and the needs generally are not being met.

In addition, many others attend school but find it often a frustrating experience, a place of confusion and torment, because they are just not geared for the classroom routine. They need classroom work specially planned for their abilities or handicaps. A capable youngster with a serious speech or hearing or visual defect can be made to feel dumb; an emotionally disturbed youngster can be a distracting influence on an entire class; a gifted youngster can sit and vegetate in pure boredom in a class which he tends to find a prison for his imagination or feel out of it in a class of older children who are nearer his mental capacity.

This is the problem faced by the exceptional child, and by his parents, and by all of us. Because the specialized equipment or the special techniques—or, most important, the specially trained teachers—are not available, the exceptional child suffers from unrealized educational opportunities, and his family is often caught in an agonizing situation. I think all of us know of such families and the problems they face. And lastly, we as a nation suffer in terms of a tragic wastage of human resources, of skills and abilities we cannot afford to waste.

I am not going to put this in terms of cold war or West versus East or the fact that the Soviet Union is outstripping us in the education of scientists and engineers and technicians. True, a gifted child whose talents are wasted because he is not stimulated to learn to his full capacity might otherwise become a great inventor or scientist whose discoveries could bolster our defenses, but that is not the point I wish to make. I should like to present this problem not in terms of national defense but in terms of what is right and fair to American children and to our society, which could be enriched by the contributions of all of these exceptional children if given the opportunity to learn and contribute to their full capabilities.

FOUR TO SIX MILLION SCHOOL-AGE CHILDREN

Who are these children? And how many are there?

They are, as I said, the mentally superior, on the one hand, and the mentally retarded, on the other. In addition, they include the crippled and deformed, including the cerebral palsied; the deaf and the hard-of-hearing; the blind and the partially seeing; the speech-defective; the undervitalized; those with special health problems, including the cardiopathic, epileptic, and tuberculous; the emotionally malajusted, and the delinquent.

There is no exact count available on the number of children in each of these groups, but the estimates considered most reliable, based on spot studies by localities and national organizations, place the total somewhere between 4 and 6 million children in the school ages between 5 and 17.

In 1954, Romaine P. Mackie and Lloyd M. Dunn of the United States Office of Education reported—"with some reluctance," they said, because of the lack of exact information—that informed estimates showed the following incidence of exceptional children of school age for the year 1952:

Blind and partially seeing	68,000
Crippled	510,000
Special health problems	510,000
Deaf and hard of hearing	510,000
Speech handicapped	680,000
Socially maladjusted	680,000
Mentally retarded	680,000
Gifted	680,000

Mr. Speaker, I think there might well be some surprise at the size of those in the gifted category, those with I. Q.'s of above 125, for according to this tabulation, the intellectually superior equal in round numbers the number of mentally retarded children of school age.

THE AMERICAN PROMISE OF EQUALITY OF OPPORTUNITY

As I said, most of our attention in the Congress has been focused on the admittedly serious educational problems of the mentally retarded. They need help.

They deserve help. And we are providing research, at least, in this field, with the good prospect of enacting legislation to help train more teachers in the specialized skills of teaching mentally retarded children. The Senate has twice passed such a bill.

But this overall problem is so big we cannot restrict any solution just to this one group of exceptional children. And certainly our resources are adequate to enable us to provide help in all of these categories I mentioned.

In 1954, the Office of Education held a conference on qualification and preparation of teachers of exceptional children, and in the course of the conference a proposed Creed for Exceptional Children was presented by Leonord Mayo director of the Association for the Aid of Crippled Children, and was accepted by the conference and by the Office of Education, which has since published it. I am going to include the full text of that Creed for Exceptional Children at the conclusion of my remarks, as exhibit A, but right now I would like to quote a few passages from it.

This document states:

We believe in the American promise of equality of opportunity, regardless of nationality, cultural background, race, or religion.

We believe that this promise extends to every child within the borders of our country no matter what his gifts, his capacity, or his handicaps.

We believe that the Nation as a whole, every State and county, every city and hamlet, and every citizen has an obligation to help in bringing to fruition in this generation the ideal of a full and useful life for every exceptional child in accordance with his capacity: the child who is handicapped by defects of speech, of sight, or of hearing, the child whose life may be adversely influenced by a crippling disease or condition, the child whose adjustment to society is made difficult by emotional or mental disorders, and the child who is endowed with special gifts of mind and spirit.

TRAINED MIND AND WARM HEART

The final paragraph of this document states:

Above all, we believe in the exceptional child himself; in his capacity for development so frequently retarded by the limits of present knowledge; in his right to a full life too often denied him through lack of imagination and ingenuity on the part of his elders; in his passion for freedom and independence that can be his only when those who guide and teach him have learned the lessons of humility, and in which there resides an effective confluence of the trained mind and the warm heart.

Mr. Speaker, I have quoted only portions of the document, the Creed for Exceptional Children, and I hope those who read these remarks in the CONGRESSIONAL RECORD will read the full text of this inspiring declaration. I prize a framed copy of it in my office, and I will readily acknowledge that I have borrowed very heavily from it, deliberately, for the language of the preamble of the bill which I am introducing.

I think those few passages I quoted sum up a philosophy with which we must agree wholeheartedly if we truly mean to see to it that each child in this great country shares equally in the opportunity to learn. We know that each cannot learn at the same speed or to the same degree. But for those who can absorb knowledge and skills, we must make sure the opportunity exists for the child to benefit to the full extent possible.

We do that now for adults, and for children reaching maturity, in connection with vocational training and vocational rehabilitation. We provide the means by which men and women and young men and young women, with physical handicaps can be helped and taught to qualify for skilled employment. Wonders are being performed under this program.

But why must we wait until the handicapped child is almost grown and ready for employment to begin thinking of his need in this respect? If we can perform wonders now in the rehabilitation process—and we can—then think how much more we could accomplish with that same individual if we began his specialized education as a youngster and geared it to his capabilities just as we later gear the vocational rehabilitation program to the physical capabilities of the individual?

SPECIALIZED TEACHING TECHNIQUES

Special educational techniques for the exceptional child would eliminate a tremendous amount of emotional stress for many of these children in the growing-up stage and thus help make better citizens of them and better communities for all of us.

Special education does not always and invariably involve special classes, but it does involve specialized teaching. In this connection, I think one of the best statements of the problem which I have seen was made in the annual report of the Ames, Iowa, public schools for 1954–55, in which Walter L. Hetzel stated:

It must always be remembered that the education of exceptional children has basic concepts and goals in common with the education of all children. The same principles of child development prevail. A deaf child is a child with a hearing handicap. As a child, he has all the needs, desires, and physical energy of children in general. Basically, the only way in which he differs from an average child is his inability to hear; and because of this hearing handicap, he is unable to speak.

This difference makes it necessary to plan his education with special consideration for his disabilities. The mentally retarded child, the child with visual impairment, the crippled child, and every other exceptional child has fundamental motives and drives common to children in general; but along with those common characteristics, there is in each case a specific handicap or exceptional condition that requires an adjustment or special service in his educational program.

That program should be designed with full recognition of (a) his likeness to normal children, and (b) his special needs. This, in brief, constitutes the modern approach to the education of exceptional children.

EDUCATORS AWARE OF AND DISTURBED BY PROBLEM

Mr. Speaker, in discussing this problem today and in presenting my bill for referral to committee in the next few days, I do not want to give the impression that this is some new and uncharted field, or that I have discovered the existence of a previously unrecognized problem. Every family which has an exceptional child knows of the existence of this problem. So does every teacher who struggles with the task of trying to accommodate such a child in a group of 35 or 40 or more other youngsters, when there is insufficient space and not enough teaching hours in the day to cope with such tremendous classes. Our school administrators know of the problem, and so does the Office of Education, which has published much on it.

Many schools and many school systems are trying determinedly to meet the challenge which this problem presents. I was amazed at the number of Catholic schools, for example, set up specifically to meet the needs of exceptional children. I was also deeply impressed by the tremendous amount of literature on this problem. I am going to include, I might say, for printing in the RECORD, an excellent digest of this material as prepared for me in the Library of Congress.

TEACHER SHORTAGE IS BASIC FACTOR

One theme runs through all of this material, and is voiced again and again by Federal officials, State and local school administrators, and all of the experts in this field. It is this:

The problem is serious not because there is a lack of techniques or knowledge for helping these children, but because of a lack of trained teachers specially qualified to use these techniques and skills.

If it were possible to underline any of my remarks or place them in italics in the RECORD for emphasis, that is the one sentence in this whole report which I would underline. For it is the key to the problem, and thus I have made it the basic factor in my bill.

According to the research material prepared for me by the Library of Congress, there are today perhaps 25,000 specially trained schoolteachers equipped or certified to provide the specialized teaching required for various types of exceptional children. Some of the States have gone into the leadership on this in setting up certification standards for teaching exceptional children and many have established on a mandatory basis classes for certain physically handicapped and mentally retarded children.

Furthermore, at least 133 colleges and universities are now presenting sequences of courses leading to degrees for teachers or supervisors or researchers in various areas of exceptionality, and the increase in interest in this work on the part of the colleges and universities in recent years has been extremely gratifying.

Nevertheless, the number of teachers specially trained in these fields is so small compared with the magnitude of the need that any program to help in the education of exceptional children must start—and must concentrate on—assuring the training of many more teachers, and men and women to teach such teachers.

I am informed that a conservative guess on the number of elementary and secondary schoolteachers needed in these fields would be 100,000—4 times the 25,000 teachers now reported to have these specialized skills. And even that number, I am told, would not assure a

desirable or practical ratio of teachers to students needing this specialized help.

PURPOSE OF PROPOSED BILL

One estimate which has been submitted to me—and the reasoning behind it can be found in the research material provided by the Library of Congress analyzing the ratio of teachers in various categories of exceptionality to the number of children in each group—shows a need of not 100,000 such specialized teachers right now, but rather 223,500. Of course, when we only have 25,000 now, it is perhaps idle to think in terms of obtaining 10 times that many. I would be happy, indeed, in the coming decade, if we could just double the number of those presently available. But while the bill I have prepared is ambitious for this program, it cannot even begin to do that job, or anything remotely approaching it.

The purpose of my bill is not to have the Federal Government proceed to do the job, but just lead the way, to provide a limited number of scholarships and fellowships to teachers and prospective teachers to encourage them to go into this field where they are so desperately needed; to provide some assistance to the colleges and universities pioneering in this work to enlarge facilities or obtain specialized equipment; and, above all, to stimulate the States and the localities not only to recognize their obligations—most of them do now—but rather to see the way to setting up the specialized classes or programs which are so necessary, knowing that under this bill more and more qualified teachers will be coming out of the advanced training courses prepared to take over such programs and build their effectiveness.

The Sullivan bill would work in this fashion:

AWARDS TO INDIVIDUALS

Beginning in this present fiscal year, and extending over 7 years, the Office of Education could award a total of $18,500,000 to teachers and prospective teachers for specialized training, primarily at the graduate level, in the field of education of exceptional children. The appropriations authorized for this purpose would be limited to $500,000 for the current fiscal year ending next June 30, increasing each fiscal year thereafter by $1 million until a maximum of $3,500,000 a year was reached in the fiscal year ending June 30, 1961. This amount would continue each year, then, until the end of the fiscal year 1964. These grants would carry such stipends as the Commissioner of Education would determine, but the basic idea is that, by providing for living expenses as well as tuition or other expenses, they particularly enable men and women already engaged in the teaching profession to feel that they can afford to go back to school for this specialized advanced training.

UNDERGRADUATES COULD BE INCLUDED

The money would be allocated on a strict ratio among the States, based on the school populations of the respective States. If there were not enough successful applicants from any State to use up the State's full allocation in any 1 year, the remaining amount would revert to the Treasury. It could not be reallocated among other States.

Although the program is intended primarily to attract teachers with degrees for advanced training at the graduate level, there is a special provision in the bill to permit the Commissioner, when he deems that advisable, to make awards also for study at the undergraduate level. Thus, if there should be a limited number of graduate teachers in a particular State who were interested in going into this field, there would still be opportunity for the Commissioner to make awards to teachers who have not yet earned degrees or to residents of the State who have never taught professionally but who want to enter this field of teaching the exceptional child. But the primary emphasis of the bill, as I said, is on work at the graduate level.

The awards of scholarships and fellowships would be made directly to the individual recipient, not to the colleges or universities offering specialized courses. Since more institutions of higher learning are entering this field year by year, the recipient would thus have a free choice of institutions, providing, of course, that the recipient attended an accredited institution which offered appropriate courses in this field.

AWARDS TO INSTITUTIONS

An additional total amount of $2,500,000 would be authorized for appropriation during the 7-year program for grants to colleges and universities, primarily for installation of specialized equipment or facilities for training teachers in the fields of exceptional children. This particular item is not allocated on a State-by-State basis, nor is there a limitation on how much of the $2,500,000 could be appropriated in any 1 fiscal year. The basic idea in connection with this phase of the bill is to give the Commissioner of Education an opportunity to help schools actively engaged in teacher-training work to expand facilities, to put in necessary laboratories, and so on.

The Commissioner would be free to use some of it in order to help an institution of higher education expand its faculty in order to establish courses in teacher training in the exceptionality categories. But I repeat, the emphasis intended on the use of this money is for things, rather than personnel. The amount of money involved is really so small that it could be used up quickly and to little overall effect if much of it were to go to schools to hire personnel, but I would not want to tie the Commissioner's hands too tightly if it should be determined by those best in a position to know the facts, that substantial portions of the awards to institutions should be made for that purpose.

Conceivably the best use to which this $2,500,000 might be put could even be for the purpose of setting up summer workshops or institutes at a number of centrally located colleges and universities. I just throw that out as a possibility, knowing that the summer institute idea has been used with very great success in the National Science Foundation program for high school teachers of science and mathematics.

ADVISORY COMMITTEES

Rather than try to spell out in every detail how these funds would have to be used to achieve the greatest effectiveness, I have provided in the bill for the creation of an advisory committee to assist the Commissioner in determining the areas and priorities of need in the award of grants to individuals and institutions, and in setting the standards for making the awards.

The advisory committee would be composed of people conversant with the overall educational needs of exceptional children, which is broad enough in phraseology, I hope, so that it could include outstanding lay people and other professionals not just professional educators. To assure full participation by the professional educators now engaged in this work, I suggest in the bill the establishment of advisory panels of specialists in special education for each of the various categories of exceptional children who could advise the Commissioner on particular problems and needs in their respective fields.

COOPERATION WITH THE STATES

There is one other provision of the proposed bill which I believe warrants mention at this time, a provision calling for close and continuing and affirmative cooperation with the various State educational agencies to keep them fully informed of all developments under this program.

In this connection, the Commissioner of Education is instructed to notify the appropriate State officials of the names and home addresses of each resident of their State who is studying under a scholarship or fellowship grant under this program, and the field of study each is pursuing, so that the States can then bring up whatever ammunition they can to attract these teachers to positions back in their home States.

Of course, no teacher receiving a grant would or could be required to promise to teach in a particular State as a condition to receiving the award; so they will be free agents in that respect. But the States should be encouraged to try to get these people to come back to the home State so that the schools there can benefit, and the children can benefit, from the skills which these teachers will have acquired with Federal help.

The theory behind this section on cooperation with the States is that if the State agencies are keyed into the program, and are kept fully informed of all developments under it, and are consulted on the needs for specialized teachers in their States, they in turn will develop a greater awareness of those needs and the potentials of educating their exceptional children more effectively. They will thus also be encouraged, I believe, to develop more statewide programs and stimulate the local communities to set up special classes in these areas of specialized need.

That, in substance, Mr. Speaker, is the bill which I am getting ready for introduction in the next few days. Those Members who have been interested in this field of legislation will recognize in my bill some similarities as well as many differences in comparison with those

bills which have been introduced heretofore, and which deal only with the stimulation of teacher training for the mentally retarded.

COMPARISON WITH BILLS FOR MENTALLY RETARDED

The leading bill on that subject, S. 395 by Senator HILL and others, which just passed the Senate for the second time a few days ago, would authorize a program of grants to colleges and universities to enable them to set up training courses in this field, and also to enable the colleges to award fellowships, with the institutions themselves selecting the recipients. A second part of that bill would authorize grants to State educational agencies to enable them to award fellowships and traineeships for training personnel in working with mentally retarded children.

As I said earlier, the needs of the mentally retarded children are urgent, but so are those of the children in other areas of exceptionality. That is why I have attempted to cover all of them in one bill. And having the grants to individuals made directly from the Federal Government to the recipients rather than through intermediary agencies will make it possible for these fellowships to be allocated on a strict State formula basis, with due consideration for the needs in each area of exceptionality on a national basis—since this is a national problem. If they were to be awarded through the schools, for instance, it is inevitable, I believe, for the emphasis to shift toward the specialties of each school involved. Furthermore, I would rather see the recipients of these awards have freedom of choice in selecting their school, rather than have to go to a particular college or university in order to qualify for an award under this program.

In this respect, my bill follows the example of the GI bill and also the pattern of the fellowships awarded each year by the National Science Foundation for advanced study in the sciences. The National Science Foundation, however, is directed in its authorization act only to seek where possible—it is not hard and fast—to allocate its fellowships among residents of the various States on an equitable basis, whereas my bill requires a strict allocation of the fellowships among the States on a formula basis.

BILL FOR RETARDED STIMULATED THINKING ON PROBLEM

Mr. Speaker, I have made several comments on the bill for teacher training and assistance in the field of retarded children in comparing it with the bill I have been preparing, and in pointing out that I do not think it covers the full area of urgent need. But I certainly do not want to give the impression of being critical of that bill. I readily admit that it started my thinking on this whole problem.

After having received some correspondence on this problem of the mentally retarded child from people in the St. Louis area. I became quite interested in the bill proposing the program for mentally retarded work and seriously considered introducing in the House a companion measure to the one introduced in the Senate by Senator HILL.

In pursuit of that thought, I found myself learning more and more about the scope of the problem involving all of these exceptional children, including the very gifted or mentally superior child, and eventually came more and more to the conclusion that all of these areas of exceptionality required our attention and our help.

For instance, a communication, I received on this from a mother in St. Louis, who forwarded some material from the St. Louis Association for Retarded Children, Inc., placed this problem first in terms of the mentally retarded. I include her letter of last October and my reply, as follows:

OCTOBER 9, 1956.

Mrs. JOHN B. SULLIVAN,
Congresswoman, Third District, Missouri,
New House Office Building,
Washington, D. C.

MY DEAR MRS. SULLIVAN: Enclosed is a statement made by Mr. Ackerman before the Missouri legislative committee on June 7, 1956. It lists reasons why classes for trainable mentally retarded children are badly needed and gives specific amendments to the present law, a copy of which you will also find enclosed.

I am availing myself of the kind invitation in your newsletter to express my views on legislation with which I am directly concerned. My child is retarded because of a severe emotional disturbance and our public-school system has no place for him. For his sake and for the sake of other retarded children and those who love them, I am asking you to do what you can toward securing educational legislation that will help all children.

Though mine is a personal and humanitarian reason, you will find that Mr. Ackerman has also mentioned some practical reasons.

Thank you for the newsletters. You show such genuine and sincere concern for the welfare of all people that it is indeed a pleasure to read them and a privilege to be able to state my problem personally.

Sincerely yours,

———— ————.

OCTOBER 12, 1956.

DEAR ————: Thank you for sending me the statement by Frank Ackerman on behalf of the various Missouri organizations interested in a State educational program for retarded children. I am extremely interested in this problem. Of course the amendment Mr. Ackerman favored is one involving State law rather than Federal law, but at the same time there is a very necessary role by the Federal Government it seems to me in this whole problem.

I think what I will do is refer this matter to the United States Commissioner of Education for his views on the kind of legislation that we can pass in Washington which would best help Missouri and other States to solve their problems in providing the best educational program possible for retarded children.

I appreciate your writing to me. I will do everything I can to follow up on it.

With best wishes, I am,
Sincerely yours,

LEONOR K. (Mrs. JOHN B.) SULLIVAN,
Member of Congress, Third District, Missouri.

REQUEST TO OFFICE OF EDUCATION FOR INFORMATION

I then, Mr. Speaker, addressed the following letter to the Acting United States Commissioner of Education, Dr. Wayne Reed:

OCTOBER 12, 1956.

Dr. WAYNE REED,
Acting Commissioner, Office of Education, Department of Health, Education, and Welfare, Washington, D. C.

DEAR MR. REED: Could you please tell me in some detail what the Federal Government, through the Office of Education, or through the vocational rehabilitation program or through any other program or agency, is doing to help the States in the matter of educating mentally retarded children. There has been some discussion of this problem in the Missouri Legislature and in that connection it has been noted that Federal grants to schools and fellowship stipends to trainees to help finance teacher-training programs have been assured. I would like to know just exactly what is being done.

Along the same lines, I would appreciate very much your views on what the Federal Government could do and what it should do in meeting what is certainly a serious need affecting a great many families in a most heartbreaking way. Have you recommended any legislation? Could you give me your thinking on what would be the most practical type of legislation to help meet this problem?

With best wishes, I am,
Sincerely yours,

LEONOR K. (Mrs. JOHN B.) SULLIVAN,
Member of Congress, Third District, Missouri.

His reply, on October 24, spelled out in some detail the activities of the Office of Education in the field of the mentally retarded and other exceptional children, and discussed the mentally retarded bill as an administration measure. The letter follows:

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
OFFICE OF EDUCATION,
Washington, D. C., October 24, 1956.

Hon. LEONOR K. SULLIVAN,
House of Representatives.

DEAR MRS. SULLIVAN: This will acknowledge receipt of your letter of October 12, requesting information as to what the Federal Government, through the Office of Education or through the vocational rehabilitation program or other programs or agencies, is doing to help the States in the matter of educating mentally retarded children.

For many years, the Office of Education has given attention to the educational needs of mentally retarded children. The Office maintains a Section on Exceptional Children and Youth which serves the mentally retarded as well as other exceptional children. The Section collaborates with other units of the Office and outside agencies in preparing studies and reports, gives consultative service and information particularly to State departments of education, colleges, and universities preparing teachers of exceptional children, national organizations, other Government agencies, citizens' groups, and individuals. It conducts certain special studies on such needs as the education of mentally retarded children, instruction to children in hospitals, or the special school housing needs of handicapped children. Currently a new special study is being undertaken on the needs of severely retarded (trainable) children. Examples of publications reporting such studies are enclosed.

You point particularly to the need for teacher-training programs. Within the last 3 or 4 years, the Office has been giving leadership to a nationwide study on the qualification and preparation of teachers of exceptional children. This study has been guided by both a national committee and an Office of Education policy committee and includes the opinions of about 2,000 educators in various parts of the Nation. Copies of four of the reports from this study are en-

closed. The reports from this study include also Teachers of Children Who Are Mentally Retarded, now in press.

During the current year, another activity has been added to the Office of Education which is specifically for the mentally retarded. As you know, the regular appropriation to the Office made by the 84th Congress for the current year provided $675,000 for research on educational problems of the mentally retarded. This program, which is conducted under the provisions of Public Law 531, 83d Congress, is just now beginning. The United States Public Health Service also is conducting research in this field.

At the request of this Department, the bill S. 3620 "to encourage expansion of teaching and resarch in the education of mentally retarded children through grants to institutions of higher learning and to State educational agencies" was introduced in the 2d session of the 84th Congress and passed by the Senate on June 11, 1956. Congress adjourned, however, before action on the measure was completed by the House. Companion bills, H. R. 10620, H. R. 11253, H. R. 10452, and H. R. 11674, had been introduced in the House and were pending before the Committee on Education and Labor. Accordingly, no Federal funds are now available for traineeship purposes in this field.

The Federal-State vocational rehabilitation program extends rehabilitation services to mentally retarded persons of employable age. During fiscal 1955, a total of 531 mentally retarded persons were established in employment through this progrem. In addition, the Office of Vocational Rehabilitation is supporting several research and demonstration projects in the vocational rehabilitation of the mentally retarded.

Your interest in this important field of education is appreciated and if we can be of further service to you in this or other matters, please let us know.

Sincerely yours,

WAYNE O. REED,
Acting Commissioner of Education.

Last January, shortly after returning to Washington, I took up this problem with the new Commissioner of Education, Dr. Lawrence G. Derthick, in the following letter:

JANUARY 28, 1957.

DR. LAWRENCE G. DERTHICK,
United States Commissioner of Education, Department of Health, Education, and Welfare, Office of Education, Washington, D. C.

DEAR MR. DERTHICK: I would like very much to be brought up to date on the subject of research on educational problems of the mentally retarded as a followup to the letter from the Office of Education of last October 24, in reply to my letter of October 12.

According to the CONGRESSIONAL RECORD, Senator HILL has introduced S. 395, which I assume is the same as S. 3620 of the 84th Congress. Is this substantially the same legislation the President said in his budget he would recommend in a later message to Congress? Or is something further or different planned? If so, can you tell me, generally, what is intended?

The letter of October 24 stated that out of the 1957 fiscal year appropriation of the Office of Education, $675,000 had been allocated for research on educational problems of the mentally retarded. This was more than half the appropriation for research projects, I note. The new budget, for the 1958 fiscal year, shows a substantial increase in the overall amount for the Office of Education for research projects; $2,300,000 as against $1,020,190 for the current year. Do you intend allocating a proportionate amount of this higher figure for mentally retarded studies?

I would appreciate any further information you can provide at this time on the study now underway, plus any information you may have on what the Public Health Service is doing in this field. How is that budgeted—under NIH?

Please excuse so many demands upon you in one letter but, as I am sure you understand, I feel I should have this information if I intend to try to help on getting funds for this work.

Sincerely yours,

LEONOR K. (MRS. JOHN B.) SULLIVAN,
Member of Congress,
Third District, Missouri.

MISSOURI DOING OUTSTANDING WORK

At the same time, and in view of the outstanding work which was being done in this field by the Department of Education of Missouri, I wrote as follows to H. Pat Wardlaw, assistant commissioner:

JANUARY 28, 1957.

MR. H. PAT WARDLAW,
Assistant Commissioner, Department of Education, State of Missouri, Division of Public Schools, Jefferson City, Mo.

DEAR MR. WARDLAW: Some time ago, a St. Louis mother of a mentally retarded child wrote to me and sent me a copy of the material the St. Louis Association for Retarded Children had presented before the Missouri legislative committee last June, dealing with the need for classes for trainable mentally retarded children. She said she just wanted to keep me informed on this in case there was any way I could help.

I subsequently inquired of the commissioner of education on just what the Federal Government was doing or was planning in this field, and what kind of legislation would be helpful. I particularly noted in the St. Louis association's statement that the appeal to the State legislative committee was based, to some extent, on the assurance of Federal grants to schools and fellowship stipends to trainees to help finance teacher training. As you probably know, however, the assured Federal funds were not actually authorized in the 84th Congress, although the bill did pass the Senate to authorize such appropriations.

My writing to you came about in this way: Among the material sent to me by the office of education to show the kind of research work now under way into the problems of teaching the mentally retarded (I think something like $675,000 was appropriated for that for the current fiscal year—1956–57) was a very impressive publication put out by the Missouri Department of Education. I noted that you had a part in that and wrote a preface for it—the publication, Education of Adolescents Who Are of Retarded Mental Development, prepared by a committee headed by Richard S. Dabney. In view of your direct interest in and knowledge of this serious social and educational problem, I would like your advice on the merits of the legislation passed by the Senate last year (S. 3620 of the 84th Congress) and whether you think it would be a good idea for me to introduce it in the House.

In his budget for the 1958 fiscal year, the President said he intended recommending new legislation dealing with the problems of educating the mentally retarded but I suspect it is pretty much this same bill of last year. I have asked the Office of Education about that but so far have not had any reply on that point.

I would like your guidance on what you think would be the best approach insofar as Federal legislation is concerned—whether the kind of bill which passed the Senate which provided for these grants to the schools and colleges for training of teachers—or what. I would also like to be brought up to date on what the State is doing about special classes for these children.

Incidentally, in leafing through the budget, I note that the President this year is asking the full $29,267,081 for vocational education, plus $4 million for practical nurse training, plus $228,000 for fishery trades, or a total of $33,750,881 (if the Budget Bureau's addition is correct—I haven't added those up myself). Knowing how concerned you were in previous years about the reluctance of the White House to ask for the full $29 million amount (which Congress provided, anyway), I thought you'd like to have this information (if you don't already have it).

I hope you don't mind my turning to you for the kind of information outlined above. As I said, I thought of you in this connection after seeing the very excellent booklet your Department put out on teaching the mentally retarded. You have every right to be proud of that booklet.

With my kindest regards, I am,

Sincerely yours,

LEONOR K. (MRS. JOHN B.) SULLIVAN,
Member of Congress,
Third District, Missouri.

In his reply, which I include below, Mr. Wardlaw gave me the best insight I had obtained up to that time into the real scope of the problem. As his reply indicates, I apparently failed to include in the letter I had sent him a copy of the bill I was asking him to analyze for me and he was not completely familiar with all of the details of S. 395 or its predecessor. I might explain that I subsequently sent him a copy and he agreed its provisions for training teachers for work with mentally retarded children would be very helpful in Missouri and elsewhere.

DIRE NEED FOR TEACHERS IN ALL SPECIAL AREAS

But in his reply of February 1, he really started me thinking on this overall problem by two statements which I want to emphasize now.

Pointing out how the National Science Foundation fellowships provide not only tuition but an additional stipend which serves as a financial inducement in getting teachers to take advanced training in science and mathematics instruction, Mr. Wardlaw said:

It is generally believed that the best teachers in the area of special education are good, experienced elementary teachers with additional training in the areas necessary for the teaching of handicapped children. Such people, however, are already trained as regular elementary teachers and are regularly certified as such. They will not, therefore, generally go on to school to obtain additional training as special education teachers without some sort of scholarship or financial inducement.

He then added this paragraph which I believe in looking back on it probably sparked the bill which I am introducing:

The special education program for orthopedics, mentally retarded and deficient, speech defectives, deaf and hard of hearing has undergone some slight changes in Missouri during the past 2 years because of State legislation, but the program is very effective and is expanding rapidly. Much interest is being shown at the present time, and bills have been introduced in the Missouri General Assembly which will no doubt cause the program to be improved and increased very rapidly. There is a dire need for teachers in all of these special areas in Missouri at the present time.

His letter follows in full:

DEPARTMENT OF EDUCATION,
STATE OF MISSOURI,
Jefferson City, February 1, 1957.

The Honorable LEONOR K. SULLIVAN,
United States Representative,
House Office Building,
Washington, D. C.

DEAR MRS SULLIVAN: We greatly appreciate your remarks about the bulletin of the Missouri Department of Education in the special education area. We have certainly received many favorable comments on it from people both inside and outside our State. Two additional publications in the special education area are in the process of development, and I am sure that the three of them will help very much in the development of our special education program. There is so much interest in special education throughout the country at the present time that I am sure we cannot neglect its promotion.

The University of Missouri at Columbia has a fine program for the training of teachers in special education areas, and many of the other colleges and universities also do fine work in that area. Our problem in Missouri is not in the area of setting up training programs but in getting teachers and prospective teachers to enroll in such programs. There are perhaps other States whose colleges and universities have not yet developed programs and might, therefore, have more information than do we regarding the need of such legislation as was proposed in S. 3620 of the 84th Congress. It is very probable that the United States Office of Education in Washington would have information regarding need in this area, and it is also possible that such information in this area might be obtained from Dr. Edgar Fuller, executive secretary, National Council of Chief State School Officers, Washington, D. C. He can well speak the general concensus of the 48 State departments of education regarding any proposed legislation.

Apparently the efforts of various organizations and foundations to further the training of science and mathematics teachers are producing results, because such efforts usually are of the nature of the provision of scholarships and financial inducement. It is generally believed that the best teachers in the area of special education are good, experienced elementary teachers with additional training in the areas necessary for the teaching of handicapped children. Such people, however, are already trained as regular elementary teachers and are regularly certified as such. They will not, therefore, generally go on to school to obtain additional training as special education teachers without some sort of scholarship or financial inducement.

The special education program for orthopedics, mentally retarded and deficient, speech defectives, deaf and hard of hearing, has undergone some slight changes in Missouri during the past 2 years because of State legislation, but the program is very effective and is expanding rapidly. Much interest is being shown at the present time, and bills have been introduced in the Missouri General Assembly which will no doubt cause the program to be improved and increased very rapidly. There is a dire need for teachers in all of these special areas in Missouri at the present time.

I appreciate your very fine letter and also the information about the budget requests in vocational education. We are certainly able to make fine use of funds under the full appropriation of the George-Barden Act and hope that the same appropriation can be continued for the coming year. We have also employed a fine supervisor for our practical nurse training program, and the program is well underway. Because of all of these things we are rather optimistic in Missouri, and I want personally to thank you for all of the fine things you have done to help. You have certainly been responsive to my previous letters, and I appreciate it. I wish I could give better suggestions than I have regarding S. 3620 or any similar bill. If I understand that bill correctly, it would provide help to schools and colleges for the training of teachers, and I am not too well versed on such needs. I do know we need more well-trained teachers in all areas. If the bill concerned appropriations or grants which would be distributed through this department, I assure you that we would have the necessary information and very definite opinions about it. It is difficult, though, for us to advise regarding grants that go directly to colleges and universities, because we do not have responsibility regarding them and really do not have the necessary information.

Kindest personal regards and best wishes to you. Please write whenever you feel that we may be able to provide information that will be helpful to you.

Respectfully yours,

H. PAT WARDLAW,
Assistant Commissioner, Division of Instruction, Director, Vocational Education.

By that time, Mr. Speaker, I was able to make the following status report to the mother who had written me earlier describing the problems of training or educating mentally retarded children:

FEBRUARY 6, 1957.

DEAR ———: Sometime last fall you wrote to me to express your interest in improved educational opportunities for trainable mentally retarded children and sent me a copy of the material presented before the Missouri legislative committee by the St. Louis Association for Retarded Children, Inc.

Since then, although I have written to you only once before to acknowledge the material you sent me and to express my interest, I have been in touch with a number of agencies to find out more about the possible role that the Federal Government could play in this important area of education. I am now waiting for some follow-up material from the United States Commissioner of Education.

In the meantime, I thought you would be interested in these facts:

The United States Office of Education is currently spending $675,000 on research on educational problems of the mentally retarded under a new law which we passed in the 83d Congress. I have inquired of the Commissioner whether an increase is being sought for next year. If so, I will certainly support it.

A bill to encourage the expansion of teaching and research in the education of mentally retarded children through grants to State institutions and agencies was passed by the Senate last year but was not acted on in time for approval by the House. A new bill has been introduced this year in the Senate. I am looking into it and may introduce a companion measure in the House although that will depend on advice I receive from certain experts in this field.

The Missouri State Department of Education has been doing some outstanding work, according to the United States Office of Education, in the preparation of material for teachers to help them teach the mentally retarded. I have written to Mr. H. Pat Wardlaw, assistant commissioner of the Missouri Department of Education, for suggestions on possible Federal aid in this field. His view is that the greatest help could be through the scholarship approach. Mr. Frank Ackerman, in the statement which you sent me last year, indicated such an approach would be extremely helpful.

I am writing you now not to attempt to persuade you that any of these battles have been won but just to keep up to date on what I have been doing in response to the letter you sent me last October. I am impressed by the need in this field and I am glad you took the time to interest me in it as you did.

Sincerely yours,

LEONOR K. (MRS. JOHN B.) SULLIVAN,
Member of Congress,
Third District of Missouri.

WHAT OFFICE OF EDUCATION IS DOING FOR RETARDED

In March, I received the following reply from Dr. Derthick:

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
OFFICE OF EDUCATION,
Washington, D. C. March 1, 1957.

Hon. LEONOR K. SULLIVAN,
United States House of Representatives.

DEAR MRS. SULLIVAN: I am pleased to respond to your letter of January 28, 1957.

You inquired whether S. 395 is the same as S. 3620. The bill, S. 395, is identical with S. 3620, 84th Congress, which was introduced at the request of this Department to carry out its recommendations in this field.

The appropriation for the Office of Education in fiscal year 1957 carried $1,020,000 for cooperative research. Of this amount, $675,000 has been reserved for cooperative research on educational problems of the mentally retarded; and $345,000 was set aside for support of cooperative research in other educational fields. The appropriation of these funds was authorized under Public Law 531, 83d Congress.

As of February 15, 1957, the Office of Education has negotiated 30 contracts for research on education of the mentally retarded and 25 contracts for research in other fields. We are currently negotiating contracts for additional studies which have received favorable review by our Research Advisory Committee; of these, 18 are in the field of the mentally retarded, and 10 are in other fields. These contracts will utilize either the full amount, or very nearly the full amount, of the congressional appropriation for fiscal year 1957.

With regard to fiscal year 1958, the total amount requested in the President's budget for the cooperative research program is $2,300,000. Most of this money will be required for the continuation of contracts entered into in the fiscal year 1957. The continuation of these projects is, of course, dependent upon the appropriation of the necessary funds by Congress. If Congress grants the $2,300,000 requested, we estimate that approximately $1,200,000 will be required for the continuation of research on the mentally retarded, and approximately $500,000 for the continuation of research on other projects. This will leave about $600,000 for new projects to be started in fiscal year 1958. Since we cannot forecast exactly what kinds of proposals for research we will receive in 1958, it is difficult to estimate what proportion of the $600,000 will be devoted to research on education of the mentally retarded. According to Public Law 531, all proposals are first screened by a group of educational research specialists. The recommendations of this group will weigh heavily in deciding which proposals for research are accepted and supported by the Office of Education. There is no doubt that we will continue to receive research proposals in the field of the mentally retarded; and that research in this area will continue to receive favorable recommendation by the Research Advisory Committee and support by the Office of Education.

The Department has a fourfold attack now in progress on the general problem of the mentally retarded. Participating in this attack are the Office of Education, the National Institutes of Health, the Children's Bureau, and the Office of Vocational Rehabilitation. We are sending copies of your letter to the other agencies for their response.

I trust that I have answered your requests and will be pleased to answer any further

questions. Your interest in our program is deeply appreciated.

Sincerely yours,

L. G. DERTHICK,
Commissioner of Education.

NEEDS IN FIELD OF SPEECH AND HEARING DEFECTS

Shortly thereafter, Mr. Speaker, I received letters from several educators in the St. Louis area urging my support of an amendment to provide an appropriation of $1 million for speech and hearing rehabilitation work. As the correspondence which follows would indicate, I was quite puzzled at first in trying to learn if this was for vocational rehabilitation, for the Office of Education, or what. As I recall, a number of Members were interested in pursuing this matter but we had difficulty for a while in running it down. The following sample of this correspondence with the Reverend R. A. Johnston, director of our outstanding department of speech at St. Louis University, shows how this developed:

ST. LOUIS UNIVERSITY,
March 16, 1957.

Hon. LEONOR K. SULLIVAN,
Member of Congress, Third Congressional District of Missouri, 1313 New House Office Building, Washington, D. C.

DEAR MRS. SULLIVAN: I understand that Congress is at this time considering an amendment to the bill appropriating funds for educational advancement. It is my understanding that this amendment involves Federal grants totaling $1 million to be allocated to educational institutions offering post baccalaureate graduate teaching programs at the master's degree level, in the science of hearing and speech for rehabilitation workers and teachers. It would provide for salaries of faculty members, fellowships for graduate students and accessory costs.

The field of speech and hearing rehabilitation has become a highly specialized science with a great need for teachers trained at the graduate level. I should like to call to your attention that the department of speech at St. Louis University has initiated such a program in teacher training at the graduate level. Our chief problem arises from the fact that students in this area who take professional positions in the public-school system after being graduated with college degrees, find it very difficult to leave their practices and take up further graduate study without some sort of financial aid. Training programs such as ours at St. Louis University will never be able to meet the needs of the community unless qualified graduate students are given the financial aid they need to pursue advanced study.

Might I urge you not only to lend your support to this amendment, but also to bring to the attention of Congress the importance of having a national organization, such as the Speech and Hearing Association of America, designated to participate in planning the standards and methods of disbursement of this much needed educational fund.

Sincerely,

R. A. JOHNSTON, S. J.,
Director, Department of Speech.

MARCH 19, 1957.

Rev. R. A. JOHNSTON, S. J.,
Director, Department of Speech, St. Louis University, St. Louis, Mo.

DEAR FATHER JOHNSTON: We have contacted just about every agency of the Government which would have anything whatsoever to do with the matter you brought to my attention and I am afraid that what it comes down to is this:

Your organization, the Speech and Hearing Association, has apparently alerted all of its members to write to Members of Congress on this matter but has neglected to contact us directly to explain exactly in what appropriations item this fund is to be placed or how it might be done. Even the Appropriations Committee staff reported it was in the dark of this thing.

Would you make sure that the association itself sends me a letter explaining just how it is propsing that this fund be setup—that is under the specific appropriations item?

With kindest regards, I am,

Respectfully yours,

LEONOR K. (Mrs. JOHN B.) SULLIVAN,
Member of Congress,
Third District, Missouri.

Rev. R. A. JOHNSTON, S. J.,
Director, Department of Speech, St. Louis University, 3650 Lindell Boulevard, St. Louis, Mo.

DEAR FATHER JOHNSTON: The House Appropriations Committee has just reported out the appropriation bill for the Department of Health, Education, and Welfare, and has also made public the hearings which it conducted behind closed doors. I have found in the transcript of their hearings enough information to enable me better to understand the request that you sent to me in your letter.

As I piece it together from the hearings, apparently a Dr. Bill Wilkinson, of Nashville, Tenn., spoke privately with Congressman FOGARTY, of Rhode Island, chairman of the Appropriations Subcommittee, about the desirability of a training program for teachers. However, since there never has been any legislation to authorize Federal grants for scholarship or teacher training, no appropriation could be provided for that purpose.

We have the same problem in connection with mentally retarded children. There is a research program in effect through the Office of Education but the big need now seems to be to train teachers and that would require separate legislation.

Chairman FOGARTY asked the Office of Education to make a study of what could be done in this field with, say $1 million, and the answer was that they could probably provide 2 scholarships of $4,200 each, per year, for 2 years to 15 universities for doctoral advance graduate study to prepare teachers to work with teachers—in other words, for college and university staff people; an average of 2 doctoral training grants of $4,200 each for 1 year to each State and Territory for promising teachers; plus a flat amount of $15,000 each to 20 universities for improving facilities for practice teaching, observation, and personnel.

Now this was nothing more than a rough idea of what they could do. The Appropriations Committee had the following to say about it in its report which has just been submitted to us:

"It has been conservatively estimated that, exclusive of the deaf, there are 1½ million school-age children with speech and hearing disorders. The schools have an unusual opportunity to help these children. Many with defects, especially if discovered early in childhood, could be made completely normal; others have conditions which cannot be corrected but could be improved. Children with speech disorders comprise our largest single group of handicapped children. According to leading authorities, 2 to 5 percent of our school-age population have speech defects sufficiently severe to interfere with their educational, social and emotional adjustment. An additional number have sufficient hearing impairment to require special educational provisions. They number from one-half to 1 percent of the school-age population. While something is being done by the Nation's schools to meet the special needs of these children, it is estimated that not more than 1 out of 4 speech-handicapped pupils is receiving remedial speech instruction. There are no reliable estimates of the number of neglected hard-of-hearing children, but it is known that services for these children are even less adequate. In view of the seriousness of this situation the committee requests the Office of Education to be prepared to present a program, next year, aimed at solving this problem of giving adequate educational opportunities to children with speech and hearing defects. While the most obvious program would seem to be teacher training the committee will leave to the professional judgment of the officials of the Office of Education, the determination of what will best meet this situation."

So you can see that what they are saying is for you people in the field and for the Office of Education to come forward with a good solid proposal. Perhaps the bill I have been considering introducing regarding retarded children could be made to cover also this area for grants to teachers of children with speech and hearing disorders. I will look into that possibility and let you know.

I am sorry that I sounded so puzzled by your previous letter but the appropriation process is so very complex that unless we know what the item is or where it is to appear, it is almost impossible to do anything about it until the appropriations bill has been reported out.

With kindest regards, I am,

Respectfully yours,

LEONOR K. (Mrs. JOHN B.) SULLIVAN,
Member of Congress,
Third District, Missouri.

APPROPRIATIONS SUBCOMMITTEE EXAMINES PROBLEM

As this correspondence shows, the Fogarty subcommittee had gone into this matter in closed hearing and it was only after the transcript of the hearings was made public that we could learn what had been discussed. I was tremendously impressed by the discussion on this whole matter of exceptional children which occurred in the hearings.

I am going to include those few pages out of the transcript because they show in very interesting fashion the work of the Office of Education in this field of exceptional children. I particularly want to point up, first, however, what Commissioner Derthick said at one point in those hearings:

I have been a local school superintendent and, knowing that if we could have competent instruction for these little fellows, 5 and 6 and 7 and 8 and 9 years of age, we could correct their speech problem so they wouldn't suffer social and economic handicaps as adults; every time I see a grown person with a speech difficulty it is just a tragedy to think that could have been prevented.

About 10 years ago when we started the program, we couldn't get a trained teacher. It was just practically impossible. Now and through the years, we couldn't attract them very well from outside, but what we have done is to send them away to colleges where the training is given. It is given a great many places now, but there again it is pretty hard to ask teachers on their relatively low salaries, and not paid during the summer, to go ahead and take this training after maybe they have master's degrees. So what we have tried to do is to get local civic clubs and junior chambers of commerce to raise money to send them away; but that

isn't the way it ought to be done, and you can't get enough of that to meet the demand.

I would say a program of fellowships and scholarships in this field would be an awfully good thing.

TERRIFIC SHORTAGE OF TRAINED TEACHERS

Later in the hearing, when asked about the idea of a $1 million program for fellowships in the speech and hearing area of exceptionality, Dr. Derthick said:

If a practical program of scholarships could be devised, it would speed up relieving this urgent need.

These people are in terrific short supply—and not only in this phase of education with exceptional children, special education, but in the field of the educable mentally retarded and the trainable mentally retarded and the other phases—those who work with children with cerebral palsy and general crippling conditions and so forth. There is a terrific shortage of trained teachers in all of these fields. We finally had to resort—and it was inadequate—to the method of trying to raise a little scholarship money and encouraging teachers to spend their own money to begin to get this training.

Now the colleges and universities have responded to the challenge, and they have expanded their programs of training tremendously, but the difficulty is getting teachers to staff the positions.

Mr. Speaker, the text of the appropriations hearing transcript on this discussion of the exceptional children problem, and also a subsequent report filed with the subcommittee by Dr. Derthick showing how $1 million could be used, or might be used, to help meet the educational needs of children with speech and hearing defects now follow:

EXCERPTS FROM HOUSE APPROPRIATIONS SUBCOMMITTEE HEARINGS

DIFFERENCE BETWEEN EXCEPTIONAL AND MENTALLY RETARDED CHILDREN

Mr. FOGARTY. What is the difference between exceptional children and mentally retarded children?

Dr. CONRAD. The exceptional children include the crippled, the blind, the hard of hearing, the cerebral palsied——

Mr. DERTHICK. As well as the gifted.

Dr. CONRAD. As well as the gifted.

So, it includes the whole gamut of exceptionality.

Mr. FOGARTY. But many people refer to a mentally retarded child as an exceptional child?

Dr. CONRAD. He is.

Mr. DERTHICK. He is.

He is one category in that big classification.

Mr. FOGARTY. That certainly is a field where much more work can be done than is being done.

Mr. DERTHICK. Yes.

Mr. FOGARTY. I have found this stimulation by the Federal Government is reaching in the different States and localities; also many more private groups have been formed in the last year or two, and there is a general increase in concentration on this particular problem.

Mr. DERTHICK. It is remarkable. It is remarkable, the amount of interest that is being generated in the local communities over this country.

BENEFIT TO CEREBRAL-PALSIED CHILDREN FROM MENTAL RETARDATION RESEARCH

Mr. FOGARTY. Cerebral palsy is very close to that question of mental retardation, isn't it?

The line of demarcation there is very thin; isn't that so?

Mr. DERTHICK. Of course, the cerebral-palsied child may oftentimes be a very bright child.

Mr. FOGARTY. But many with cerebral palsy have some degree of retardation?

Mr. DERTHICK. Yes; that is true.

Dr. CONRAD. In other words, it is matter of multiple defects.

Mr. FOGARTY. And work that might be accomplished through this program on research for the mentally retarded could be effective as far as those with cerebral palsy is concerned?

Dr. CONRAD. We are certainly open to good research studies in the line of cerebral palsy, and so on; but they have to come forward or we have to stimulate them.

Mr. DERTHICK. As Mr. Fogarty well says, some of the products of the research here might be applicable to these other fields.

Dr. CONRAD. Oh, yes.

Mr. MCKONE. I think we might say, also, we are tied in very closely with the National Institutes of Health on this program.

We have Dr. Van Slyke, of the National Institutes of Health, on our advisory committee.

COMMITTEE INTEREST IN RESEARCH ON MENTAL RETARDATION

Mr. FOGARTY. You know, this committee stimulated interest in this field of research on mental retardation a couple of years ago in asking you to do something about it in the field of education. Also 2 years ago we gave the Public Health Service $750,000 to start a medical research program in this field; last year we gave the Children's Bureau a couple of million dollars in the field. So, we hope this program won't get lost by being mixed in with other programs. We hope we will get some results shortly, and I think we will.

I think this advisory committee you have is a good one and, now that we are really started in that field, I think you are headed in the right direction.

It might be a little more money than some people want to spend; but, as far as I am concerned, I think we can spend a lot more than we are spending.

Dr. REED. One of the problems that concerned us a great deal in the early stages of the research program was a matter of how we could get projects that would cover many of the problems that we are facing in the field of mental retardation; and it has been surprising now, as we see in the projects that have already been approved in this area, that if the research materializes the way it seems to be going now, we will have some good answers to many of the problems in the whole area of mental retardation.

OTHER RESEARCH PROJECTS IN EDUCATIONAL FIELD

Mr. DERTHICK. I wonder if you would be interested in any thumbnail sketches of some other research projects?

Mr. FOGARTY. Yes. Go ahead.

Mr. DERTHICK. There are a number of these that interest me from my local experience.

This whole field of education for exceptional children has been one that has fascinated me because these children have been neglected so long and because we had none of it in the system in which I served.

There is a project going on in Indiana to study why the 10 percent of the top 25 percent of high-school graduates didn't go to college, because that is a fact in Indiana—that 10 percent of this top 25 dropped out between high school and college. Of course this study is going to probe into and open up areas of interest and investigation in the relationship of the universities to the field—what could these universities do to attract these young people that they are not doing; the whole question of guidance programs in high schools; the financial factors involved, and why these bright youngsters in such large numbers do not go to college; what about the home situations; how do those influences come to bear on this situation, and so on.

That is only one of the many contracts that have been signed, and I think when the results of this study come out it is going to mean that universities are going to change their whole relationships with the field.

It is going to mean that high schools are going to adapt curricula. They are going to change guidance programs. It is going to influence relationships with the homes. It will probably promote the visiting-teacher program.

It is really exciting to contemplate what is going to happen by way of change when these answers to questions that we haven't had the answers for come forward.

Up in Syracuse, they are doing a job on the educational factors in juvenile delinquency; there again, they will be exploring: What are the conditions in the home? What are the conditions at the school? What does the school need to do or can it do that it is not doing to reduce these factors and to control them?

I, myself, have seen this partnership between the school worker that we call the visiting teacher who goes into the home and sees what influences are playing upon the child, enlist other community agencies, reorganizes the forces playing on that child and brings about transformations.

Sometimes, it's very small things in a child's life that frustrates it and turns it in the wrong direction at the wrong time.

So, I see in this research program, small though it is, one of the most promising developments in American education, cutting across many phases of American life and educational activities. Certainly I think we should be indebted to the initiative this committee is taking also in encouraging this program.

TEACHING CHILDREN WHO HAVE DEFECTIVE HEARING OR SPEECH

Mr. FOGARTY. What about this problem of training or teaching hard-of-hearing children and those who have speech defects?

Mr. DERTHICK. I think we might make use of Dr. Mackie, who is a specialist in this whole field of special education, in telling us about that.

NOTE.—In the following, the transcript of Dr. Mackie's verbal testimony was rewritten to read as printed.

Dr. MACKIE. I appreciate the opportunity of saying something about this.

We have made a study in the Office of Education on the qualifications and preparation needed by teachers of various types of exceptional children. This broad study included the collection of information and opinions about the competences and professional preparation required to teach hard-of-hearing children and children with speech disorders. The purpose of the study was to try to identify and describe the distinctive competences that are needed by personnel who are to work with these children as well as with other types of handicapped children.

Mr. FOGARTY. Now, right there, as far as the teaching of the deaf are concerned, or doing research with the deaf, as distinguished from those who are hard of hearing, Gallaudet College is interested in doing some research——

Dr. MACKIE. That is right.

Mr. FOGARTY. On just the deaf.

Dr. MACKIE. Yes.

Mr. FOGARTY. They would have nothing to do with the hard of hearing.

Would there be any overlapping in your work?

Dr. MACKIE. There are 22 colleges in this country training teachers to work with the deaf, and Gallaudet is one of them, and it would be one good laboratory for study.

Mr. FOGARTY. But Gallaudet is the only college that teaches the deaf?

Dr. MACKIE. That teaches only for deaf college students; that is right.

Mr. FOGARTY. It is the only one in the world, isn't it?

Dr. MACKIE. It is the only one specifically for them, although there are many deaf students at hearing colleges throughout the Nation, and deaf students in these hearing colleges are sometimes partly supported by State funds.

STEPS TO OBTAIN COMPETENT HEARING AND SPEECH PROFESSIONALS

Mr. FOGARTY. You go ahead now and tell me what you are doing in the field of education of and training teachers for those who are hard of hearing and those with speech defects.

QUESTIONNAIRE SURVEY ON COMPETENCE NEEDED BY TEACHERS

Dr. MACKIE. In the study we just conducted, which was a cooperative study—and not quite completed—the Office worked with about 2,000 people in the Nation securing opinions about the competences needed by teachers and the types of experiences that contribute to their preparation. We used two methods to do this:

We used a questionnaire and we used committees of experts.

We are issuing statements, reporting the findings of people, and in doing this we worked with colleges and universities, the State departments of education and local school systems.

RESULTS OF SURVEY

Mr. FOGARTY. What about the results?

Dr. MACKIE. Well, I didn't come prepared particularly today on the deaf and hard of hearing, but I think I could summarize by saying the teachers——

Mr. FOGARTY. This isn't the deaf and hard of hearing now. It is those who are handicapped with deficits in speech and hearing. I am trying to confine it to that area.

Dr. MACKIE. All right.

Mr. FOGARTY. I am interested right now in the speech and hearing defects.

Dr. MACKIE. Well, they do come up with some results like this: That there are distinctive competences. There is a body of knowledge that these teachers need to have. They need to understand the physical aspects of the voice mechanism or of the hearing mechanism——

Mr. FOGARTY. These special teachers?

Dr. MACKIE. Yes, these special teachers—and they need to be able to understand and to interpret the doctor's report.

Some of the hard-of-hearing children are quite severely hard of hearing, and they may need to do a good deal of speech correction. Even though they are able to speak, they may not speak correctly. For example the teacher needs to read and to help them regain voice control. She may also need to teach lipreading.

STEPS TO CORRECT TEACHER SHORTAGE

Mr. FOGARTY. Now that we know what is needed in these teachers, what have we done to see to it that we have some trained teachers in that field?

Mr. DERTHICK. May I, Mr. Chairman, turn the question just a little?

Mr. FOGARTY. I will tell you point I am trying to make. I have in mind correspondence which I have received: "Assuming the population of Rhode Island to be 1 million," although it is only eight hundred and some thousand, "and, without knowing the school population, one could assume that a minimum of 50 hearing and speech professional workers are needed in the State, 5 persons are now registered from Rhode Island in the directory of the American Speech and Hearing Society and only 1 is certified.

"This picture varies little in other States as personnel is not available."

Now, what are we doing in that field to see to it that that situation is corrected?

Dr. MACKIE. Speech-handicapped children comprise the largest area of handicapped children, and although something is being done to prepare teachers there is a great shortage—I think there were 115 colleges and universities preparing teachers for speech correction in 1954. There are not as many preparing teachers in the hard of hearing.

This is more generally considered a dual function and although in actual practice the colleges are placing more emphasis on preparing teachers in speech than in hearing. Most of them are being prepared as speech correctionists.

Coming from the Office of Education studies are some general recommendations for preparation of teachers. Colleges should have people who have experience in the field; laboratory facilities—places where student teachers can go and work with children who have speech and hearing defects.

POSSIBLE PROGRAM FOR CHILDREN WITH SPEECH AND HEARING DEFECTS

Mr. FOGARTY. What would you do if you were given a million dollars in this field for fellowships and salaries of faculty members, with funds for research, in connection with teaching programs for——

Mr. DERTHICK. Mr. Chairman, would you pardon me for just a minute?

It is hard for me to keep still on that, because I have been frustrated by the problem.

I have been a local school superintendent and knowing that if we could have competent instruction for these little fellows, 5 and 6 and 7 and 8 and 9 years of age, we could correct their speech problem so they wouldn't suffer social and economic handicaps as adults; every time I see a grown person with a speech difficulty it is just a tragedy to think that could have been prevented.

About 10 years ago, when we started the program, we couldn't get a trained teacher. It was just practically impossible. Now and through the years, we couldn't attract them very well from outside, but what we have done is to send them away to colleges where the training is given. It is given a great many places now, but there again it is pretty hard to ask teachers on their relatively low salaries, and not paid during the summer, to go ahead and take this training after maybe they have master's degrees.

So what we have tried to do is to get local civic clubs and junior chambers of commerce to raise money to send them away; but that isn't the way it ought to be done, and you can't get enough of that to meet the demand.

I would say a program of fellowships and scholarships in this field would be an awfully good thing.

Dr. MACKIE. Yes, thank you, Dr. Derthick.

Mr. FOGARTY. What would you think——

Dr. MACKIE. Probably every State——

Mr. FOGARTY. Excuse me just 1 minute.

Dr. MACKIE. Excuse me.

GRANTS FOR SCHOLARSHIPS AND TRAINING

Mr. FOGARTY. What would you think of a proposal of Federal grants-in-aid to institutions for about a million dollars for a post-baccalaureate teaching program at the master's degree level in the science of hearing and speech and for training of teachers and professional workers?

How would that sound to you?

Mr. DERTHICK. You mean for the institutions to use this grant in scholarships?

Mr. FOGARTY. These would be Federal grants to the institution.

Mr. DERTHICK. Of course. I haven't thought through the method of doing it, but I do know, to meet the short supply, if a practical program of scholarships could be devised, it would speed up relieving this urgent need.

Mr. FOGARTY. Have you heard of Dr. Bill Wilkinson, of Nashville, Tenn.?

Mr. DERTHICK. Yes, sir.

Mr. FOGARTY. He has been very active in this field, I know.

Mr. DERTHICK. Yes.

Dr. REED. Mr. Chairman.

Mr. FOGARTY. Is that all you want to say about it?

Mr. DERTHICK. No.

Dr. MACKIE. Could I say something on this?

SPECIFIC REQUIREMENTS AND COMPETENCE NEEDED BY TEACHERS

I think there are some specific competences needed by teachers that may be different from those needed in working with adults.

This opinion was reported by the teachers and educators who made contributions to the nationwide study. Speech teachers need to have some competences and certain experiences to work with groups of children in schools'.

There may be some common elements with rehabilitation, but there are some different—very different—requirements for teachers.

Mr. FOGARTY. Could that be possible—assuming a State like Rhode Island had a million population, that a minimum of 50 hearing-speech professional workers are needed; and they only have 5?

Is it that bad, nationwide?

Dr. MACKIE. Yes.

Mr. DERTHICK. Well, it doesn't sound too far out of line to me, because these people are in terrific short supply—and not only in this phase of education with exceptional children, special education, but in the field of the educable mentally retarded and the trainable mentally retarded, and the other phases—those who work with children with cerebral palsy, and general crippling conditions, and so forth.

There is a terrific shortage of trained teachers in all these fields. We finally had to resort—and it was inadequate—to the method of trying to raise a little scholarship money and encouraging teachers to spend their own money to begin to get this training.

Now the colleges and universities have responded to the challenge, and they have expanded their programs of training tremendously, but the difficulty is getting teachers to staff the positions.

PERCENT OF SCHOOL-AGE CHILDREN WITH SPEECH AND HEARING DEFECTS

Dr. MACKIE. About 5 percent of the school-age population—3 to 5 percent—have speech and hearing problems.

Mr. FOGARTY. What is the school population?

Dr. MACKIE. About 34 million. And the speech group is the largest group of all exceptional children—the children with speech handicaps—and the next largest would be those with mental retardation.

Dr. CONRAD. Yes.

Dr. MACKIE. So, every State ought to have some facilities for preparing teachers in at least these two fields.

OPTIMUM NUMBER OF STUDENTS FOR ONE TEACHER

Dr. CONRAD. How many students can one teacher take care of?

Dr. MACKIE. If the children have completely speech problems, 75 to a hundred children. Seventy-five is considered a reasonable load; but if you have children who are hard of hearing, especially, the severely hard of hearing may need to be grouped in classes where you would have maybe 1 teacher to 15 children; something like that.

Mr. FOGARTY. So, we have over a million children——

Dr. MACKIE. Yes.

Mr. FOGARTY. Going to school who need some sort of attention in that field——

Dr. MACKIE. That is right.

Mr. FOGARTY. Of hearing and speech defects?

Mr. MACKIE. That is right.

Mr. FOGARTY. When you deal with the ones who are hard of hearing, you put your finger on one of our most acute problems, because many of the hard-of-hearing children have not been identified.

Mr. DERTHICK. Of course, methods of detection are being improved all the time, but in most of the schools I would say they might go on without being detected; and maybe they have got good minds, but they are not achieving in school and neither the parents nor the teachers have found out what is wrong.

Dr. MACKIE. Could I say what this research program in mental retardation has done? It has brought new life to the whole educational program. We have had many requests for funds for study, and in other fields of the handicapped, people ask: "Can we get money to study the hard-of-hearing child? Can we get money to study the blind? Can funds be obtained only if the topic is about the blind, mentally retarded, and so on?"

Increasingly we are getting more requests of this nature.

COVERAGE UNDERTAKEN IN STUDIES ON MENTAL RETARDATION

The studies we now have under cooperative research cover problems of mentally retarded children of a wide age range. They cover urban and rural problems; they cover the residential, the day school, and so on; they are pretty widely distributed in the States. At first, we didn't think we were going to get enough requests on the basic problem of learning. How do these children learn? If we can get a better understanding of what they learn and how do they learn and under what circumstances, then we can begin to plan our programs; we can improve our programs.

We have a good many studies now on basic learning.

FACILITIES FOR CEREBRAL PALSIED CHILDREN

Mr. FOGARTY. It is a pretty sad thing when a child, 8, 9, 10 years of age is refused education because he happens to have cerebral palsy or some form of mental retardation, which happens in many, many areas. The teacher just doesn't have the time to spend with 1 or 2 such children in that classroom of 25 or 30 or 40 and, as a result——

Dr. MACKIE. Or she may not have the competence to deal with the problem.

Mr. FOGARTY. No.

Dr. MACKIE. The problem of cerebral palsy is quite complicated.

Mr. DERTHICK. I have had citizens and taxpayers tell me that program costs too much. I have said, "If you had a child with that handicap, would it cost too much?"

Mr. FOGARTY. That is right. It wouldn't cost too much if they had a child in that condition.

Dr. MACKIE. There are two ways of looking at it: One is the humanitarian, which you just pointed out; and the other is from the cold economic standpoint. We just can't afford it.

Mr. FOGARTY. That is a cold approach.

Dr. MACKIE. That is a cold approach, but maybe it isn't quite so cold, either. If we don't take care of them, we leave it to the family.

Mr. FOGARTY. That is a good approach to that person who says it costs too much money.

METHOD PROPOSED FOR HANDLING GRANTS IN FIELD OF SPEECH AND HEARING DEFECTS

Dr. REED. Mr. Chairman, to come back to your original question, if we were going to make grants in the area, if we tried to do something about having more teachers in the area that you just mentioned, we would probably have to approach it from the trainee and fellowship grants to train at the doctor's level for professors at colleges and universities and the researchers and the supervisors in local systems and State departments first. Then, after you get the highly prepared individuals, later on you could come into the preparation of teachers; but if we had a scholarship program to train teachers, there simply would not be the professional people at the colleges and universities. So, it seems to me you would have to approach it first in getting the higher level people first, and then probably have some grants to help the institutions establish training areas.

You see, some of the colleges and universities train just one area, and very few of our colleges train in all areas. In other words, that is the approach we are using in this proposed bill for fellowship and trainee grants in the field of mental retardation.

Dr. MACKIE. If I might go one step further, you asked a question which I didn't answer. You asked how we would go about it if money were available.

I think the first thing would be to take this group of colleges and universities which we studied rather thoroughly to find out about their resources and select those that have sequences of preparation, that is, those that are giving enough instruction so they give a fairly well-balanced program, and then explore to see if they have enough community resources to give the student-teacher the kinds of practice teaching and observation that ought to be given, and then try to get programs through the colleges and universities in those States. Then I suppose the next step would be to work with colleges and universities that have the resources and wish to open new programs.

One of the things that teachers all over the Nation have indicated is that they want instructors who have had experience in teaching in the areas in which they instruct students. They also want places where they can see children. This means that communities which do not have any classes or opportunities to observe in clinics, do not have very good resources for training special teachers.

Mr. FOGARTY. All right.

Mr. MACKIE. I think we should say the nationwide response to the cooperative research funds for mental retardation shows the appreciation of eagerness of people to get the answers to many of the questions.

Mr. FOGARTY. When it is possible to see what can be done with some of these children, I don't know why more work wasn't attempted in this field long, long ago, because you can get results.

Mr. DERTHICK. You can.

Dr. MACKIE. Definitely.

Mr. FOGARTY. In the past, they were given up.

Mr. DERTHICK. Yes.

REPORT TO HOUSE APPROPRIATIONS SUBCOMMITTEE

POSSIBLE EDUCATIONAL PROGRAMS FOR CHILDREN WITH SPEECH AND HEARING DEFECTS

(The following was submitted at the request of the committee. Discussion of this subject appears in connection with hearings on the salaries and expenses of the Office of Education which begin on p. 301.)

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
March 8, 1957.

Hon. JOHN FOGARTY,
House of Representatives.

DEAR MR. FOGARTY: In accordance with your request, our staff has prepared the enclosed draft plan for educational programs for children and youth with speech defects and impaired hearing. The plan was pointed specifically to your question of what could be done with approximately $1 million to meet educational problems in this field.

It should be pointed out that the enclosed plan has not been cleared through the usual budgetary channels and is not a proposal to increase the Office of Education budget.

If there is any further information which you desire, please do not hesitate to let me know.

Sincerely yours,

L. G. DERTHICK,
Commissioner of Education.

THE NEED FOR PERSONNEL TO CONDUCT EDUCATIONAL PROGRAMS FOR CHILDREN AND YOUTH WITH SPEECH DEFECTS AND IMPAIRED HEARING

It could be conservatively estimated that, exclusive of the deaf, there are 1½ million school-age children with speech and hearing disorders. The schools have an unusual opportunity to help these children. Many with defects, especially if discovered early in childhood, could be made completely normal; others have conditions which cannot be corrected but could be improved. Most hard of hearing children, even though cure for them is not possible, can be helped through speech training and lipreading to obtain an education and a means of communication with their fellows.

Children with speech disorders comprise our largest single group of handicapped children. According to leading authorities, 3 to 5 percent[1] of school-age population have speech defects sufficiently severe to interfere with their educational, social, and emotional adjustment. An additional number (although not deaf) have sufficient hearing impairment to require special educational provisions. They number from one-half to 1 percent[2] of the school-age population.

While something is being done by the Nation's schools to meet the special needs of these children, it is estimated that not more than 1 out of 4 speech-handicapped pupils is receiving remedial speech instruction; the number of neglected hard-of-hearing children is difficult to estimate, but it is known that services for these children are even less extensive or adequate.

Both the speech and hearing-impaired children represent a group for whom the schools could render a most valuable service. The most serious obstacle to progress is the lack of qualified teachers. Many more with distinctive competence and specialized preparation will be required. These educators are needed not only to work directly with children, but also to staff the teacher-education institutions and to give supervisory leadership to State and local school systems.

According to recent statistics,[3] about 3,000 teachers of speech-defective and hard-of-hearing children were reported to be working in the Nation's public schools.[4] It is well known that many of these teachers are carrying such large enrollments of speech-defective children that their work is ineffective. It is probable that 15,000 to 18,000 teachers would be needed to meet the demands of the schools.

The colleges and universities in this country have recoginzed this problem, and are making an effort to meet the need for speech correctionists and teachers of the hard of hearing, but many of these teacher-preparation institutions are understaffed and lacking in the facilities essential for the technical program of training educators for this work.

Through a recent study[5] of the Office of Education, 115 colleges reported some oppor-

---

[2] Figures supplied by the American Hearing Society.

[3] Mabel C. Rice and Arthur S. Hill. Biennial Survey of Education in the United States, 1952–54, ch. V; Statistics of Special Education for Exceptional Children, 1952–53, Washington, U. S. Government Printing Office, 1954.

[4] Only approximately 1 out of 20 of this number were working with the hard of hearing.

[5] Romaine P. Mackie and Lloyd M. Dunn. Colleges and University Programs for the Preparation of Teachers of Exceptional Children. Office of Education Bulletin, 1954, No. 13.

tunities for the preparation of speech correctionists,[6] but the same colleges reported only 112 full-time staff members in speech correction and only 61 in speech and hearing. Relatively few of these colleges and universities—perhaps 15 to 25—appear to have the facilities to conduct doctoral programs. Many of the others seem to be inadequately staffed and otherwise ill equipped even for the training of undergraduate students in this area. These colleges participating in the Office study granted, in 1953 (according to their reports), only 30 doctor's degrees in speech correction, and 3 in speech and hearing. Further, they reported only about 250 master's degrees in these areas. A poll was made in the study just referred to on the types of special teachers which were in greatest demand. Replies showed that the largest number of requests was for teachers of the mentally retarded, and the second largest for teachers of speech and hearing.

Increasingly, it is also being recognized that these teachers should be prepared to work with both speech defectives and hard-of-hearing children. Evidence of this is found in the State certification requirements.[7] In 1953, 30 States had State certification standards for teachers of the speech handicapped and 27 for teachers of the hard of hearing. Of this number, 10 had joint certification standards for speech-handicapped and hard of hearing.

In order to solve this problem, fellowships and scholarships should be made available specificaly for the preparation of such personnel. While this ultimate purpose would be to increase the number of well-qualified teachers to work directly with children and youth, the first step should be the provision of fellowships at the doctoral level and financially adequate to attract promising teachers and supervisors. Emphasis in the next 2 or 3 years should be on this part of the program. Some of these individuals would then become professors in colleges and universities—thus increasing the teacher-education capacities of the existing programs. Others could head programs in other colleges. Still others would assume positions of leadership and supervision in State and local school systems and give their attention directly to the expansion and improvement of educational programs for children in the Nation's schools.

If approximately $1 million were available, funds might best be used in the following way:

1. Training grants to qualified colleges and universities for grants for doctoral advanced graduate study to prepare teachers to work with children who have speech and hearing disorders. The purpose would be to prepare individuals to give leadership to programs of teacher-preparation in colleges and universities, to serve as college and university staff members, and to serve as supervisors in State and local school systems. (2 scholarships of $4,200 each per year for 2 years to 15 universities)	$252,000
2. An average of 2 doctoral training grants in the education of speech and hearing disorders to each State and Territorial department of education to be awarded to promising teachers or supervisors in the respective State or local school systems. (2 scholarships of $4,200 each for 1 year to 53 States or Territories)	$445,200
3. A flat amount to colleges and universities to aid in improving the facilities for practice teaching, observation, and for personnel in the 20 universities. (15,000 each)	300,000
4. For administration of the program in the Office of Education	50,000
Total	1,047,200

[6] About half of this number also listed opportunities for the preparation of teachers for hard-of-hearing children.

REQUEST FOR DRAFT OF BILL COVERING ALL EXCEPTIONALITIES

Mr. Speaker, following the extended, almost knockdown battle in the House over every item in the appropriation bill for the Department of Labor and the Department of Health, Education, and Welfare, during which we came within a single vote of having the item slashed to ribbons for research through the Office of Education on the problems of educating the mentally retarded, I wrote again to Commissioner Derthick asking his office to draft for me a bill to carry out the overall kind of program I had by then become convinced was needed. That letter follows, along with Dr. Derthick's reply explaining that while the Office of Education would be glad to give me all the information I might need, they could not draft the bill I had requested:

APRIL 11, 1957.

DR. LAWRENCE G. DERTHICK,
United States Commissioner of Education, Department of Health, Education, and Welfare, Office of Education, Washington, D. C.

DEAR DR. DERTHICK: Those of us in the House who opposed the indiscriminate slashing of the budget for the Department of Health, Education, and Welfare are still shaking a bit over the narrow escape of the Office of Education on your cooperative research fund and I am glad enough votes were switched on the rollcall to save the appropriation but it was too close for comfort, as I am sure you will agree.

Thanks to the extensive correspondence which I have had with the Office of Education since last October, I was conversant with the needs for this money, particularly in the field of research in the training of retarded children, and I like to think that my efforts had some effect in switching votes to get the appropriation through the House. Now I want to make a bargain with you.

As you know, I have been inquiring about the kind of legislation which would be effective in establishing Federal scholarships or fellowships to encourage the training of teachers in this field of working with retarded children. Since taking up that matter with your office, I have learned of a similar need for encouraging graduate work among teachers going into the fields of teaching children with speech and hearing defects.

I know from the Appropriation Committee hearings that you submitted an outline of how a $1-million-a-year-grant program could be operated in this field if you had legislative authority and if it were considered desirable. I am also familiar with your reservations about it and the fact that no such program has been recommended by your agency or the Bureau of the Budget, so I know that your hands are tied somewhat in that respect.

But the more I think about this whole subject, the more I am convinced that what we need is not a piecemeal special program for training grants for teachers of retarded children under one law and other piecemeal program under a different law for grants for teachers of children of hearing and speech defects, and then perhaps a third law dealing with grants for teachers of gifted children or other children in the so-called exceptional category. Why not 1 bill, 1 law, which sets up a program for Federal scholarships to encourage teachers to take graduate training, or perhaps specialized undergraduate training, covering all of these fields, applying to both the handicapped and the gifted children, applying to all of them very unusual teaching situations?

I repeat that I know your hands are tied in voicing opinions on this matter or in recommending legislation except through regular departmental and governmental channels. On the other hand, I know that your office has the knowledge and the know-how when it comes to drafting legislation in this field, and so I am turning to you to ask you if you can have prepared for me in your agency, not as an official Office of Education bill or recommendation, but just as a favor to a Member of Congress specifically requesting it, a bill which would carry out the purposes I have outlined and which would apply to teachers of retarded children, teachers of children with speech and hearing defects, teachers of any other so-called exceptional children, covering this entire field.

I would want the kind of bill that you people feel would cover the areas of greatest need in this respect. I would want the authorization it contained to provide for sufficient funds to carry out a really meaningful program based on the best judgment of the experts in your agency.

Can this be done? How long would it take? Would you have to get any special clearance from the Secretary or from the Bureau of the Budget to provide this service to me?

Please let me know if there would be any difficulty in this respect, because I can always go the Legislative Reference Service of the Library of Congress, or to the office of the Legislative Counsel in the House for services of this nature, but if I did so, I would have to specify exactly what the legislation I wanted drafted should contain and I am not sure that I know, that is why I turn to you and your agency where you have the expert knowledge in this field.

With kind regards, I am,
Sincerely yours,
LEONOR K. (Mrs. JOHN B.) SULLIVAN,
Member of Congress,
Third District, Missouri.

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
April 24, 1957.

Hon. LEONOR K. SULLIVAN,
House of Representatives.

DEAR MRS. SULLIVAN: This is in reply to your good letter of April 11 in which you requested our help in the preparation of a bill to provide for assistance to encourage the training of teachers of exceptional children.

Permit me first to express our sincere appreciation for your stanch support of the Department's budget, which included the necessary funds for the Office of Education. The interest and concern that you and other Members have shown regarding our programs is most gratifying.

We are pleased to have the opportunity, upon request, to supply information and render technical services to Members of the Congress on matters coming within the competence of the Office. We are not equipped, however, to do technical drafting of legis-

lation, nor, as a matter of policy, do we recommend to individual Members of Congress specific proposals for inclusion in draft bills.

However, I feel certain that we can be of assistance to you in developing specifications for a bill. We can furnish you pertinent facts, so far as they are available to us, concerning the quantitative need for teachers in this field, existing training programs, problems in obtaining suitably trained teachers of exceptional children, and information regarding the administration of grant programs. We may also be able to suggest alternative approaches to the problems involved.

Such information would enable you to determine what specifications your bill should contain. The House legislative counsel could then do the technical drafting from your specifications. If this arrangement is satisfactory to you, please let me know and we shall make arrangements to develop information for your purposes.

I want to thank you again for your helpful interest in the Office of Education and in the cause of education generally. Also, with the thought that you may find it useful, we are enclosing a recent report on the provisions of State laws relating to education of exceptional children.

Sincerely yours,

L. G. DERTHICK,
United States Commissioner of Education.

LEGISLATIVE REFERENCE SERVICE UNDERTAKES RESEARCH TASK

Subsequently, therefore, I addressed the following letter to Dr. Ernest S. Griffith, director of the Legislative Reference Service of the Library of Congress:

May 8, 1957.

Dr. ERNEST S. GRIFFITH,
Director, Legislative Reference Service,
The Library of Congress,
Washington, D. C.

DEAR DR. GRIFFITH: I have become very interested in the problem of providing improved educational opportunities for various types of children, broadly referred to as in the exceptional category. My interest was aroused originally by parents of mentally retarded children in my district who referred to the difficulties of having such children trained or educated to their full capacities.

The Office of Education has a program underway now of research into the problems of teaching the mentally retarded child—and this is very useful and important—but as I understand it, one of the greatest needs is for specially trained teachers in this field. In the last Congress, the Senate passed a bill, S. 3620, to authorize the granting of fellowships and traineeships to assist the colleges in developing teachers in this specialized field, but the bill did not come up in the House.

A similar bill, S. 395, has been introduced by Senator HILL in this Congress. I had been thinking of introducing its companion in the House until certain other things were called to my attention. I have been told that the problem is equally serious in training teachers who can in turn train children with speech and hearing defects. I have also been informed that we have a similar problem in training teachers who can specialize in the education of exceptionally able children. In other words, there is a shortage of adequately trained teachers for teaching a great many different groups of so-called exceptional children, and it is not restricted just to the mentally retarded group.

For that reason, I recently wrote to the Office of Education asking if they could prepare for me a bill which would carry out their best judgment as to the kind of legislation which would be most effective in meeting this overall problem. I enclose a copy of my letter and also of Dr. Derthick's reply which arrived during the Easter recess.

You will note from Dr. Derthick's reply that he offers to be of assistance to me in providing pertinent facts and so on, but says the Office of Education cannot actually draft a bill or even recommend specific proposals for it.

I think, under the circumstances, therefore, my best approach would be to ask you to put one of your fine people to work getting from the Office of Education the kind of facts Dr. Derthick's letter says they are prepared to give. I would be more than willing to depend upon the informed judgment of the Legislative Reference Service, then, in determining for me what the bill I have in mind should actually include.

There is a job here which has to be done if we are to meet a serious social problem and a serious educational problem. We have rather elaborate programs under way now for Federal scholarship aid in the scientific fields. I think it is equally important to make sure that we have the trained teachers we need to get the most out of the educational capabilities of the handicapped children and of the exceptionally gifted children.

I would appreciate it very much if the Legislative Reference Service could undertake this assignment.

With kind regards, I am,

Sincerely yours,

LEONOR K. (MRS. JOHN B.) SULLIVAN,
Member of Congress,
Third District, Missouri.

That probably constitutes enough background correspondence, Mr. Speaker, to show the origin and development of portions of this bill. I have always felt that in introducing a measure, especially one which seeks to chart a somewhat new approach, a Member can perform a valuable service to those interested in the subject matter of the bill by showing how the idea happened to come into being. Perhaps I have overdone it here. I hope not.

But I have traced the sources responsible for planting the idea in my mind of having one overall program for all of these areas of exceptionality, rather than a series of separate, piece-meal programs.

What I have not mentioned is the truly outstanding help in determining the details of the legislation given me by the Legislative Reference Service in response to my letter to Dr. Griffith.

LIBRARY EXPERTS EXTREMELY HELPFUL

Mr. Charles Quattlebaum, specialist in education for the Legislative Reference Service, who has provided committees of Congress time after time with outstanding analyses of educational issues, directed the research on this for me, interviewed the experts in the Office of Education, and described for me the areas of need and the various approaches which would be attempted. Many things in the bill represent ideas which he suggested. The actual drafting of the bill, of course, was not done in the Library of Congress. A draft was prepared by the House Legislative Counsel based on Mr. Quattlebaum's research, and subsequently I have been working out refinements to fit the final decisions which I have made on the bill's provisions. In any effort of this nature there are many alternatives, and the Member must make these final choices and decisions—others can advise us but we must decide exactly what we want our bills to provide.

But I deeply appreciate the work of Mr. Quattlebaum and of Mr. Herman A. Sieber, research assistant in Education and Government in the Legislative Reference Service Senior Specialists Division, who assisted Mr. Quattlebaum in this project and prepared, under Mr. Quattlebaum's direction, a comprehensive digest of information on the issue which gave me the facts I needed to make my decisions.

That digest, and also a compilation made for me by Mr. Sieber listing the colleges and universities in each State offering courses in special attention in the field of exceptional children provide very valuable background material, Mr. Speaker, and I am including those two documents for printing at the end of my remarks, as separate exhibits B and C, following the Creed for Exceptional Children.

In expressing appreciation for the assistance I have received on this proposal from many sources, I must certainly include Mr. Charles B. Holstein, who organized the project for me and assisted me on it at every stage of the way.

COLLEGES BECOMING INCREASINGLY CONCERNED

In the research material which will appear at the conclusion of my statement, I would like to call attention particularly to the listing of colleges because it shows that in most of our States there are at the present time outstanding institutions offering courses of teacher-training in one or more areas of exceptionality. A bill such as this will stimulate these colleges to expand this work, and will encourage other institutions to get into it. The fact that each State would have an allotment of fellowships or scholarships would be a spur to institutions in those States not now offering programs in this field to get into it quickly.

The colleges and universities seem to be most interested at this time in courses in speech correction, followed by those in the area of hearing defects, and, of course, this is understandable since these groups together represent probably the largest numerical concentration among exceptional children.

But it is interesting to note that a couple of universities have initiated courses to train teachers equipped to teach gifted children; a few more have entered the partially seeing, the blind, the special health problem, the crippled and the socially maladjusted areas, and a substantial number offer specialized courses in the fields of teaching the deaf and mentally retarded.

A report for 1954 showed 4,600 students were majoring in these specialized areas, a total of 5,700 took single courses in specialized areas, and 1,549 received degrees in one or another of these areas of exceptionality.

So it is evident that much is being accomplished by the schools in training teachers and prospective teachers. But the problem is so great and the needs so acute that we must take effective action through a Federal program—not to do the job for the States and localities; it is primarily their problem and their

task—but rather to stimulate their efforts, to provide guidance and assistance, and especially to help now to train the specialists who in turn can train more teachers, supervisors and researchers in these areas.

Make it worthwhile for the skilled teacher to go on in this work—to take advanced training—and you will have really dedicated people on the college faculties and in the elementary and secondary school classrooms.

Perhaps then we can again read the Creed for Exceptional Children in the next 7, 8, or 9 years and know that we did not hide from the problem—that we saw the need and we rose to its challenge.

We believe—

Says this creed in one paragraph—

that the teachers of exceptional children must possess the personality, develop the understanding, and acquire the knowledge and skill through special preparation that will enable them to inspire and motivate, as well as teach, the art of making a living and a life.

Mr. Speaker, for a fraction of the money we spend in this Federal Government on less urgent, less vital and less lasting causes than the happiness of millions of handicapped American children, we could go a long way toward providing just that kind of dedicated teacher.

Through the bill which I have prepared, the Exceptional Children Educational Assistance Act, we can pave the way for the education of thousands of such teachers.

Mr. Speaker, if we spent on the average over the next 7 years only three one-hundredths of 1 percent of what we spend on alcoholic beverages alone each year, we could help assure the specialized teachers needed to enable these 6 million or so schoolchildren to get the kind of education they need and deserve. $3 million a year represents only about one thirty-three one thousandths of our annual spending for alcoholic beverages.

It only represents about 36 hours—one and a half day's—operation of the soil bank, that is all, or about 30 minutes' worth of expenditures for defense.

The entire $21 million this program would cost over the 7 years is hardly enough to buy a few bombers—perhaps 2 B–52's and a B–58, without spare parts.

Certainly we cannot neglect our defense needs, and I do not suggest it. But I deeply feel that this $21 million, at an average cost of $3 million a year for 7 years, would be the best bargain in the entire Federal budget.

EXHIBIT A—CREED FOR EXCEPTIONAL CHILDREN ACCEPTED BY THE UNITED STATES OFFICE OF EDUCATION CONFERENCE ON QUALIFICATION AND PREPARATION OF TEACHERS OF EXCEPTIONAL CHILDREN

(Presented by Leonard Mayo, director, Association for the Aid of Crippled Children, on October 29, 1954)

We believe in the American promise of equality of opportunity, regardless of nationality, cultural background, race, or religion.

We believe that this promise extends to every child within the borders of our country no matter what his gifts, his capacity, or his handicaps.

We believe that the Nation as a whole, every State and county, every city and hamlet, and every citizen has an obligation to help in bringing to fruition in this generation the ideal of a full and useful life for every exceptional child in accordance with his capacity; the child who is handicapped by defects of speech, of sight, or of hearing, the child whose life may be adversely influenced by a crippling disease or condition, the child whose adjustment to society is made difficult by emotional or mental disorders, and the child who is endowed with special gifts of mind and spirit.

We believe that to this end the home of the exceptional child, the schools, the churches, and the health and social agencies in his community must work together effectively in his behalf.

We believe that for most exceptional children their parents and teachers are the master architects essential to the planning and building of their future.

We believe, therefore, that every appropriate resource of the community must be mobilized, if need be, to aid in maintaining his family life at an adequate social and economic level, and in furnishing guidance and encouragement to his parents.

We believe that the teachers of exceptional children must possess the personality, develop the understanding, and acquire the knowledge and skill through special preparation that will enable them to inspire and motivate, as well as teach, the art of making a living and a life.

We believe that the cooperative efforts of parents and teachers must be encouraged, sustained, and supplemented by teacher education institutions with curricula and programs based on the knowledge and skills needed in the education of exceptional children by State departments that will develop challenging standards of program operation and work with teachers in establishing sound certification procedures; by local school systems that will recruit and employ teachers who are qualified by personality and special preparation; by health and welfare agencies that will provide diagnosis and evaluation, medical and psychiatric care, and social services.

We believe that research designed to increase present knowledge of personality and the learning process and studies aimed at the improvement of programs of special education are essential to further progress.

We believe in the sensitive interpretation of the exceptional child and his needs by taechers and others in order that an attitude favorable to his acceptance and development may be engendered and sustained in the community.

Above all, we believe in the exceptional child himself; in his capacity for development so frequently retarded by the limits of present knowledge; in his right to a full life too often denied him through lack of imagination and ingenuity on the part of his elders; in his passion for freedom and independence that can be his only when those who guide and teach him have learned the lessons of humility, and in whom there resides an effective confluence of the trained mind and the warm heart.

PART I. ASPECTS OF THE PROBLEM

A. The children concerned. The term, "exceptional children," applies to those boys and girls whose physical, social, intellectual, and emotional characteristics represent an exceptionality.[1] Estimates of the number of exceptional, or atypical, children, for whom special education programs are usually considered necessary, range from 4 to 6 million.

B. Identification of exceptional children. In almost all fields of exceptional children, there are, on the average, two secondary handicaps per child. Other markworthy factors complicating the gathering of accurate data as to the total number of exceptional children are: (1) the degree of accuracy of diagnosis and measurement of the exceptionalities concerned, (2) reluctance of some parents to identify homebound children, and (3) local differences in classification standards.[2] No complete census has ever been made of the number of exceptional children in the United States.

The United States Office of Education has undertaken a conservative estimate of the number of exceptional children of school age. Mackie and Dunn who prepared the Office of Education estimate, have written:

"The best that can be done is to use the percentage of incidence based on spot studies made by national organizations and local communities. The figures are presented with some reluctance, since there is need for research to determine better estimates. * * * In the estimates which follow, it is assumed that the exceptionalschild is included once—under the major handicapping condition, although it is known that many of these children have secondary disabilities."[3]

TABLE 1.—*Incidence of exceptionality and estimated number of school-age exceptional children, 1952*

Area of exceptionality [1]	Estimated number of school-age children (in round numbers)	Percentage of incidence
Blind and partially seeing	65,000	0.20
Crippled	510,000	1.50
Special health problems	510,000	1.50
Deaf and hard of hearing	510,000	1.50
Speech-handicapped	680,000	2.00
Socially maladjusted	680,000	2.00
Mentally retarded	680,000	2.00
Gifted	680,000	2.00
Total	4,318,000	12.70

[1] There is disagreement as to how the areas of exceptionality should be defined. All told, 13 areas of primary exceptionality have been noted: (1) Intellectually incapable, neither trainable nor educable, I. Q. below 25; (2) mentally deficient but trainable, I. Q. between 25 and 50, (3) educable mentally retarded, I. Q. between 50 and 75; (4) crippled and deformed, including the cerebral palsied; (5) deaf; (6) hard of hearing; (7) blind; (8) partially seeing; (9) speech-defective; (10) undervitalized, those with special health problems, including the cardiopathic, epileptic, and tuberculous; (11) emotionally maladjusted; (12) delinquent; and (13) intellectually superior, highly gifted, I. Q. usually above 125.

Mackie and Dunn made the following comment on the significance of their incidence table:

"This * * * is not the complete story. To include only children in the age group 5 through 17 would not give an adequate picture of those in need of assistance from the schools." [4]

A report on State provisions for special education, prepared by the Laws and Legislation Branch of the United States Office of Education in 1956 indicated that:

"Most States, recognizing the need for early identification and admission of handicapped children, specify an early age or leave the minimum open; a few States extend the maximum beyond the legal school age." [5] Legally specified age limits for the physically and mentally handicapped range from age 3, in 8 States, to age 35, in 4 States.[6]

C. The specialness of exceptional children. The Creed for Exceptional Children, accepted by the United States Office of Education Conference on Qualification and Preparation of Teachers of Exceptional Children, points to the specialness of exceptional children:

"We believe in the American promise of equality of opportunity, regardless of nationality, cultural background, race, or religion.

"We believe that this promise extends to every child within the borders of our country no matter what his gifts, his capacity, or his handicaps.

"We believe that the Nation as a whole, every State and county, every city and hamlet, and every citizen has an obligation to help in bringing to fruition in this generation the ideal of a full and useful life for every exceptional child in accordance with his capacity; the child who is handicapped by defects of speech, of sight, or of hearing, the child whose life may be adversely influenced by a crippling disease or condition, the child whose adjustment to society is made difficult by emotional or mental disorders, and the child who is endowed with special gifts of mind and spirit.

"We believe that for most exceptional children their parents and teachers are the master architects essential to the planning and building of their future.

"We believe that the teachers of exceptional children must possess the personality, develop the understanding, and acquire the knowledge and skill through special preparation that will enable them to inspire and motivate, as well as teach, the art of making a living and a life.

"Above all, we believe in the exceptional child himself; in his capacity for development so frequently retarded by the limits of present knowledge; in his right to a full life too often denied him through lack of imagination and ingenuity on the part of his elders; in his passion for freedom and independence that can be his only when those who guide and teach him have learned the lessons of humility, and in whom there resides an effective confluence of the trained mind and the warm heart.[7]

"'Remember,' wrote Graham and Barrow in the Nation's Schools, 'the exceptional child in your community is asking only for his birthwright—an equal opportunity to obtain a full education which will help him acquire the social pattern necessary to live well with his fellow man.'[8]

"Describing them as 'the forgotten ones,' Jenks reminded: 'These exceptional children are, first and foremost, children—more like the average child than unlike him.'[9]

In the Annual Report of the Ames (Iowa) Public Schools, 1954–55, Schoolman Hetzel elaborated:

"It must always be remembered that the education of exceptional children has basic concepts and goals in common with the education of all children. The same principles of child development prevail. A deaf child is a child with a hearing handicap. As a child he has all the needs, desires, and physical energy of children in general. Basically, the only way in which he differs from an average child is his inability to hear; and, because of this hearing handicap, he is unable to speak. This difference makes it necessary to plan his education with special consideration for his disabilities. The mentally retarded child, the child with visual impairment, the crippled child, and every other exceptional child has fundamental motives and drives common to children in general; but along with those common characteristics there is in each case a specific handicap or exceptional condition that requires an adjustment or special service in his educational program. That program should be designed with full recognition of (a) his likeness to normal children and (b) his special needs. This, in brief, constitutes the modern approach to the education of exceptional children." [10]

The White House Conference on Child Health and Protection, called by President Herbert Hoover, in 1931 declared that few investments of taxpayers' money had yielded as large a return as that invested in vocational rehabilitation. The conference asked:

"If such results can be obtained by the special training of disabled adults, who have in large measure lost the plasticity and adaptability of youth, how much more can be accomplished through the special treatment and training of handicapped children? [11]

D. Special education, what it is and how it got started: The term "special education" refers to all those adjustive instructional services which are especially planned for exceptional children of preschool, elementary, and secondary, schol age. It does not include remedial instruction in subject matter for those children of approximately normal behavior and ability who, for some reason, fall short of expected achievement.

The approach of special education is defined by Jenks as follows:

"Since these children cannot accommodate themselves to the curriculum, we must adjust the curriculum to them. The school is built for the children and not vice versa. We must consider the whole child, his abilities as well as his disabilities." [12]

Modern special education is usually considered to have started in the Halle, Germany, experiment in 1859, and the Boston day class for the deaf 10 years later. The following chart, compiled from several sources, presents a brief summary of the historical beginnings of special education.[13]

TABLE 2.—*Chronology of "special education" programs, 1700–1957*

Program	Date	Place
Selection of gifted children for special education.	(1)	Ottoman Empire (Saleiman).
1st classes for blind	1784	Paris, France.
1st residential school for handicapped in United States (for deaf).	1817	Hartford, Conn.
1st school for mentally retarded.	1859	Halle, Germany.
1st day class for deaf	1869	Boston, Mass.
1st class for speech defectives.	1887	Potsdam, Germany.
1st school for mentally retarded in United States.	1897	Springfield, Mass.
1st day classes for blind, crippled.	1900	Chicago, Ill.
1st school for gifted in United States.	1901	Worcester, Mass.
1st open-air program for undervitalized.	1908	Germany.
1st school for hard-of-hearing.	1904	New York.
1st special classes for crippled children.	1907	Massachusetts.
1st public school class for speech-defective.	1908	New York.
1st open-air class for undervitalized.	1908	Providence, R. I.
1st class for partially seeing.	1908	England.
1st American classes for partially seeing.	1909	Cleveland, Ohio.

[1] 16th century.

E. The State programs. Some type of special education has been authorized, with or without financial assistance, in all 48 States. The following table indicates the number of States with legal provisions for special education in the various fields of exceptionality, as of December 1955: [14]

TABLE 3.—*Number of States with legal provisions for special education, by fields of exceptionality, as of December 1955*

Field of exceptionality	Type of provision		Number of States
	Mandatory [1]	Permissive [2]	
Physically handicapped	17	31	48
Educable mentally retarded	15	31	46
Trainable mentally deficient	6	13	19
Maladjusted and delinquent	3	12	15
Gifted [3]		1	1

[1] Mandatory legislation requires establishment of services under certain conditions.
[2] Permissive legislation states that local districts may provide services for exceptional children.
[3] Pennsylvania.

Because of the differing needs of the children in the various areas of exceptionality, special education of today follows five organizational patterns: (1) Special schools and classes for longtime placement, (2) special classes for shortterm placement, (3) home or hospital instruction, (4) special supplementary instructional services, and (5) residential school programs.[15]

These organizational patterns reflect 3 types of programs: (1) Cooperative, in which the child carries on part of his program in a regular classroom but receives help and/or equipment and instruction, (2) segregated, in which special classrooms are used, and (3) integrated, in which a visiting teacher serves the child in his regular classroom.[16]

According to Jenks:

"The vast majority of our exceptional children can be integrated into the regular class; another large segment will need special services, but only a small group will need special classes. All will need certified trained teachers."

F. The number of special teachers available. It is usually estimated that there are 25,000 special teachers. The most recent United States Office of Education statistics show:

"Fourteen thousand three hundred and sixteen special-education teachers in city school systems. Approximately 3,000 teachers working in residential schools, and at least 2,500 giving hospital and home instruction. Still others not reported are in nursery schools * * * in private schools * * * (and) in small local school systems in rural areas. If allowance is made for the teachers not reported, the total number 25,000 is easily justifiable." [17]

The following table, showing the number of exceptional children and their teachers in special schools and classes only, is based on data reported by the United States Office of Education in its Biennial Survey of Education in the United States, 1952–54: [18]

TABLE 4.—*Number of pupils, elementary and secondary, and teachers, full time and part time in special schools and classes, 1952–53*

Area of exceptionality	Pupils		Teachers [1]		Approximate number pupils per teacher
	Elementary	Secondary	Full time	Part time	
Mentally retarded (educable)	80,363	28,540	6,411	300	[2] 16
Mentally retarded (severe)	4,515	147	320	36	[2] 16
Special health problems	10,166	1,289	788	80	13
Crippled	15,924	1,889	1,378	120	12
Deaf	3,446	489	451	28	8
Speech defective	254,179	52,568	2,011	245	136
Blind	658	181	89	6	9
Gifted	3,683	19,233	722	204	23
Partially seeing	6,544	1,470	621	26	13
Hard of hearing	9,680	2,252	400	80	24

[1] A teacher serving more than 1 type of exceptional child is reported only with the type to which she devotes the major portion of time.
[2] Represents the average number of pupils per teacher for both educable and severely mentally retarded pupils.

G. The Supply-Demand Ratio. A good indicator of the teacher need for each area of exceptionality is the supply-demand ratio.

The following table presents the rank order of the frequency of special teachers needed and available in the various areas of exceptionality. These rankings are based on a response to a questionnaire sent to 329 school administrators and professors of special education by the United States Office of Education.[19]

Mackie and Dunn commented:

"A comparison of the requests for teachers and their availability is both interesting and significant. There are few requests, for example, for teachers of the partially seeing and for teachers of the blind, but even so, it is rather difficult to find qualified persons in the areas when they are needed." [20]

H. The number of special teachers needed. The literature in special education usually expresses the teacher-need as 4 times the available number; that is, 100,000.

Mackie and Dunn wrote that probably the teacher-need figure of 100,000 should be reexamined. They gave one example to illustrate this:

"On a basis of an average class enrollment of 18, it seems reasonable to estimate that approximately 40,000 teachers are needed in the area of mentally retarded alone. This leaves only 60,000 for all other types of exceptionality and for personnel who would occupy administrative and college teaching positions." [21]

TABLE 5.—*Demand-supply frequency of special teachers*

Area of exceptionality	Rank order (frequency of requests)	Rank order (difficulty in securing teachers)
Mentally retarded	[1] 1	4
Speech handicapped	2	[3] 10
Deaf	3	[4] 1
Hard of hearing	4	5
Crippled	5	8
Socially maladjusted	6	3
Blind	7	2
Partially seeing	8	6
Special health problem	9	9
Gifted	[4] 10	7

[1] Highest demand.
[2] Highest availability (supply).
[3] Lowest availability (supply).
[4] Lowest demand.

Generally, the pupil-teacher ratios for exceptional children are, as might be expected, lower than the one existing in the regular classroom. Dividing the number of pupils per teacher into the estimated number of school-age children (table 1) will support the conclusion that certainly no less than 100,000 special teachers will be needed to provide adequate instructional services for the four to six million exceptional children.

I. The practical pupil-teacher ratio. Representations of a summary pupil-teacher ratio for exceptional children have little if any value. Furthermore, it is not possible to establish an ideal and practical pupil-teacher ratio which would not have to be continually revised as more severely handicapped children are accepted for special education. During the period 1947–52, the average number of pupils per teacher of crippled childen declined from 14.3 to 11.9 and, for children with special health problems, from 24.4 to 13.2. Rice and Hill commented that:

"It seems quite evident that the smaller classes which are characteristic of service in these two areas of special education are the result of emphasis upon the acceptance of children who are more severely handicapped." [22]

Approximate pupil-teacher ratios for the various areas of exceptionality are useful, however (as has already been pointed out), to the extent that they can be applied against the estimated incidence of children in the various areas of exceptionality in order roughly to determine the present need for teachers.

The following table gives relevant data:

TABLE 6.—*Practical pupil-teacher ratio and number of teachers needed, by field*

Area of exceptionality	Estimated number of school-age children [1]	Practical pupil-teacher ratio [2]	Number of teachers needed (rounded)
Blind and partially seeing	66,000	11	6,000
Crippled	510,000	12	42,500
Special health problems	510,000	13	39,000
Deaf and hard of hearing	510,000	23	22,000
Speech handicapped	680,000	136	5,000
Socially maladjusted	680,000	25	27,000
Mentally retarded	680,000	16	42,500
Gifted	680,000	23	29,500
Total	4,316,000		223,500

[1] Table 1.
[2] Table 4.

[18] Rice, Mabel C., and Arthur S. Hill. Statistics of Special Education for Exceptional Children, 1952–53. Op. cit., pp. 15–16; table 1, p. 19.

[19] Mackie, Romaine P. and Lloyd M. Dunn. College and University Programs for the Preparation of Teachers of Exceptional Children. Washington, Government Printing Office, 1954, pp. 6–7. (U. S. Office of Education Bull. 1954, No. 13).

[20] Mackie, Romaine P. and Lloyd M. Dunn. College and University Programs for the Preparation of Teachers of Exceptional Children. Op. cit., p. 7.

[21] Mackie, Romaine P. and Lloyd M. Dunn. College and University Programs for the Preparation of Teachers of Exceptional Children. Op. cit., p. 5.

[22] Rice, Mabel C. and Arthur S. Hill. Statistics of Special Education for Exceptional Children, 1952–53. Op. cit., p. 16.

Table 6 has its obvious shortcomings, but it does show that many special teachers are needed. Furthermore, it indicates that the teacher-need figure of 100,000, in Mackie and Dunn's words, "should be reexamined."

J. The effect of the shortage. The obvious effect of the teacher shortage is that education-needy exceptional children are not sharing in the American educational experience.

A publication by the United States Office of Education has indicated that "not more than a quarter of the Nation's handicapped and gifted children are receiving the special help which they need. In almost every case, the lack of qualified teaching personnel is the basic reason for this unfortunate situation. In many communities where public support is excellent and financing assured, school systems are unable to establish programs because they cannot find a teacher with the special competencies essential to effective work with the particular type of exceptional child for whom the service is to be established." [32]

Baker made the same point:

"The training of teachers for exceptional children has been one of the major problems in the development of an adequate program. Often a school system has been forced to abandon its proposed program for some type of special class when no teachers were available in that particular field. * * * It was a very striking phenomenon that during the days of the greatest general teacher surplus there was a shortage of teachers trained for special education. When there is a general shortage of teachers the problem becomes very acute." [34]

K. What is being done. The following table shows, for the academic year 1953–54, (1) the number of universities offering sequences of preparation, (2) the number of students enrolled in those courses, (3) the number of faculty members involved, and (4) the number of degrees conferred. These data are based on responses to a United States Office of Education questionnaire sent to institutions of higher learning offering much sequences of preparation. One hundred and twenty-eight institutions, representing approximately nine-tenths of the colleges and universities, gave information on these items.

TABLE 7.—*Statistical summary of faculty strength and student enrollment at colleges and universities, academic year 1953–54,*[1] *showing number of institutions offering sequences of preparation; faculty members, students enrolled, and degrees conferred*

A Area of exceptionality	B Universities offering sequences of preparation	C Total full-time and part-time faculty members	D Total students majoring in specialized areas	E Total students taking single courses in specialized areas	F Number of degrees granted [3]
Blind	3	7	33	67	20
Crippled	14	35	156	136	58
Deaf	24	94	195	76	67
Gifted	2	2	21	34	2
Hard of hearing	68	26	61	100	7
Mentally retarded	40	137	805	624	285
Partially seeing	7	10	30	66	9
Socially maladjusted	10	8	82	174	20
Special health problems	5	3	60	18	3
Speech correction	116	342	2,330	2,719	725
Speech and hearing	1	167	600	423	230
2 or more areas of exceptionality other than speech and hearing		55	226	20	122
Overall		11		[4] 1,255	1
Total	[4] 128	897	4,601	5,712	1,549

[1] Mackie, Romaine P. and Lloyd M. Dunn. Programs for the Preparation of Teachers of Exceptional Children. Op.cit., pp. 12, 137, 42, 44, 91 (errata).
[2] Jan. 1–Dec. 3, 1953.
[3] Enrolled in survey courses.
[4] Number of institutions in the United States offering sequences of preparation for teachers in 1 or more areas of exceptionality. 42 institutions offer specialized curricula in only 1 area; 73 offer specialized curricula in 2 to 5 areas; 7 offer specialized curriculums in 6 or more areas.

L. The need for meeting the shortage with qualified teachers. The need for meeting the shortage of teachers in special education with qualified teachers is understood in two-thirds of the States where special credentials for teachers in one or more areas of exceptionality are required by law. The following table breaks down the incidence of such certification requirements in the 32 States, by areas of exceptionality.[33]

TABLE 8.—*Number of States with requirements for special credentials for teachers of exceptional children*

Area of exceptionality	Number of States
Speech	30
Hard of hearing	27
Mentally retarded	22
Crippled	22
Socially maladjusted	9
Blind	13
Partially seeing	21
Deaf	18
Gifted	1
Special health problems	12
Special credential valid for teaching in area of exceptionality, no special certification required	16
Special credentials for teachers in 1 or more area of exceptionality required	32

Mackie and Dunn wrote:

"The close relationship between the extent of special certification and number of teacher-education and public school programs is striking." [35]

M. A. continuing problem. The percentage of incidence of exceptional children has not been reduced appreciably by modern medical science.

It is true, of course, that many diseases have been demobilized, thereby saving countless boys and girls from the consequent disabling effects of the diseases.

It is also true, however, that medical progress in another field has made it possible for just as many boys and girls, who would have died in a former day, to survive. These children unfortunately survive with physical, emotional, or mental disabilities that will distinguish them educationally as exceptional.

Furthermore, it appears that it will take quite some "doing" to remove the factors responsible for the shortages in special education. Mackie and Dunn concluded:

"Many factors are responsible for this lag on the part of the schools. Among these are lack of personnel, inadequate housing, transportation problems, and difficulties encountered in screening, diagnosis, and placement. Most serious of all is the lack of qualified teachers." [37]

PART II. SOME COMMENTS BY AREAS OF EXCEPTIONALITY

A. The visually defective (blind and partially seeing). Mackie and Cohoe, in a publication on teachers for partially seeing children, have written:

"Generally a child is considered partially seeing if his visual acuity in the better eye, with correction, is 20/70 or less and he uses sight as his chief channel of learning. Special services and materials should be available insofar as they are needed to assist the child in realizing his optimum physical, mental, social, and vocational potentialities. Specialized knowledge, skills, and abilities, over and above those required by the regular classroom teacher, are required by the teacher of partially seeing children." [38]

Berthold Lowenfeld, pleading for special education for the blind, has written:

"The blind want to live as independent individuals who are conscious and desirous of fulfilling their economic and social obligations to the community, but do not hesitate to be bold if ignorance or prejudice denies them their full rights as citizens." [39]

Jacobus Tenbroeck has called for a bill of rights for the blind, "not declaring our independence from society but our need of being integrated into it; not guaranteeing special favors and position, but equality of treatment; not glossing over our weaknesses or limitations, but recognizing us for what we are, normal human beings, or at least as normal as human beings are; a bill of rights according us a fair chance to live socially useful lives." [40]

B. The speech defective. Johnson said in 1950 that: "there should be 1 speech correctionist to approximately every 4,000 pupils. Estimating very conservatively that only 5 percent of the pupils will be found to have significant speech problems, there will be 200 children needing speech correction among every 4,000 pupils." [41]

[41] Johnson, W. Speech Handicaps. Part II. The Education of Exceptional Children. Forty-Ninth Yearbook, National Society for

Pintner, Eisenson, and Stanton defined defective speech as follows:

"Speech may be considered defective when it is not easily audible and intelligible to the listener. Speech is defective if it is vocally or visibly unpleasant or labored in production. Finally speech is defective if it is inappropriate to the individual in regard to his mental and chronological age, sex, and physical development." [23]

C. The maladjusted. The White House Conference on Child Health and Protection in 1931 commented:

"Hospital facilities for mental patients in the United States * * * outrank the combined total of all other diseases. If the cost of crime and court procedures of cases with mental disease or with advance symptoms of delinquency are added to the hospital costs already cited, the price will become more exorbitant than even a wealthy and charitable minded nation can long afford.

"The nervous and emotionally unstable constitute a large majority of the total number of behavior problems. The third group is know as the delinquent. * * * The establishment of special schools and special classes should be greatly increased in order to meet this need." [24]

Carrington said:

"Emotionally and socially handicapped children * * * have hostilities, idiosyncrasies and psychic disfigurements of such dimension that they need individual care not always available in the classroom. These pupils need security, affection, and satisfaction out of life of a socially approved sort. They need to be helped on their way to emotional maturity." [24]

Walsh, on the scope of the problem, has written:

"The socially maladjusted child who is most frequently in the forefront of public attention is the child who is labeled 'the juvenile delinquent.' The problem is of such scope that the entire community must be concerned. A democratic philosophy of education holds the school responsible for the education of all the children of all the people." [25]

The National Conference on Prevention and Control of Juvenile Delinquency, on the need for special teachers for the maladjusted, said:

"An atmosphere of mutual respect and affection should permeate the classroom and should result in wholesome and effective teacher-pupil relationship. Since all the classroom activities center about the teaching personality, the teacher herself should be a well-adjusted and wholesome individual." [26]

In defining the regular teacher, an Arizona workshop on the problem pointed out the need for special teachers of the maladjusted: "a skilled, professionally trained person, an expert in the field of education. It is not to be expected, or even desired, that she should also be an expert in treating emotional problems. Helping children now, while they are still children, in school, is especially important, because for many it is the only help they will ever get." [27]

Baker, in an article about the problem child, commented:

"It was the job of the school to teach those who were able to learn, and if learning did not take place or there was maladjustment in behavior, it was not the duty of the school to do anything about it. In recent years the concept that the school must teach good social living and citizenship as well as subject matter has changed the point of view." [28]

D. The gifted: On the shortage of developed mindpower a publication of the Fund for the Advancement of Education has said that:

"The importance of accommodating the individual differences of young people of similar age is widely recognized, yet many of our conventional academic arrangements inhibit the nurturing of these individual talents and capacities.

"The most critical requirement is to attract into teaching enough of the Nation's finest quality manpower, for it takes talent to produce talent." [29]

On the need for teachers of the gifted Brown wrote:

"In short, among the various devices we have discussed for aiding gifted children, there is no cheap substitute for skilled teaching by highly educated and resourceful and devoted teachers." [30]

Shaffer said:

"Interest in the pupil of unusual mental capacity has been stimulated by the Nation's growing need for highly trained specialists. Roughly 5 percent of the general population rates 125 [I. Q.] or higher. Such children need superior teachers who are fully versed in their special field and have talent for creative teaching." [31]

Passow wrote about the need for enrichment of the curriculm for the gifted:

"Enrichment for the gifted child is of particular concern to the public school because a curriculum which satisfies a large majority of children may not necessarily care for outstanding students. Society must expect rewarding returns from the gifted child to warrant additional investment in his education. Are we short changing the gifted? When we deny precious youngsters the full development of their potential, we not only cheat them—we rob society of precious human resources." [32]

E. The Crippled. The White House Conference on Child Health and Protection in 1931 made the following observation:

"The education of the crippled child is not philanthropy—it is enlightened self-interest. It is manifest that teachers of crippled children must have exceptional qualifications and training. Michael Dowling said: 'I believe that the saddest sight in the world is that of a crippled child sitting at the window each morning watching his brothers and sisters go forth to school.' " [33]

F. The Deaf and Hard of Hearing. The United States Office of Education, in a publication on teachers of deaf children, declared:

"The education of the deaf child is a difficult process. Who is competent to teach the deaf child? It is in the teacher herself that the dynamic power for development of competencies resides. Those who administer or supervise State and local programs have an obligation to foster the greatest possible development of their teachers in service. Instruction of the deaf is one of the more technical fields. Because teachers of the deaf are more difficult to secure than any other in the field of education, and because their preparation is relatively expensive, it would seem that additional scholarships should be made available to those wishing to teach the deaf." [34]

Baker, in his textbook on exceptional children, has written:

"The Federal census has been making special listings of the deaf, beginning in 1830. In round number the number of the totally deaf approximately equals the number of blind. * * * A committee on hard-of-hearing children of the American Federation of Organizations for the Hard of Hearing reported in 1926 that 14 percent of pupils have hearing defects. Whether this estimate is entirely correct or not, it is probably close enough to the real facts to show that impaired hearing is a problem of great magnitude.

"The education of the deaf is a highly specialized and intensive type of education. The teachers must be especially well-trained. When it is considered what education really accomplishes for deaf children in training them to speak and otherwise live normal lives socially, as well as psychologically, the greater cost is well repaid." [35]

G. The undervitalized. The White House Conference on Child Health and Protection in 1931 commented:

"Under the term 'lowered vitality' are included all those types of cases which, without distinct or visible evidence, physically handicap a child. There is a great need for special education and training of all cases of lowered vitality. Educators in America have believed, for the most part, that American schools were providing equal opportunity for all children to develop their abilities to the fullest extent. It is gradually becoming apparent that such is not the case.

"The slogan of the educators of the handicapped should be: 'An expert and technically trained teacher for every physically handicapped child in the United States.' The teacher is the basic factor in educating, training, and placement." [36]

H. The Intellectually Impaired. The United States Children's Bureau has estimated:

"Out of each 1,000 of the population, 30 are mentally retarded. Of this 30, 25 are educable and 4 are trainable and 1 is totally dependent." [37]

On degrees of impairment, an article in the Encyclopedia of Educational Research contains this statement:

"From an educational standpoint, those children who appear to be permanently in-

capable of profiting to any considerable extent from the regular curriculum of the schools and who are regarded as trainable rather than educable, and, hence, permanently socially inadequate and vocationally incompetent, have been most frequently classified as mentally defective, mentally deficient, or feebleminded, in contrast to those who are rated as merely backward, retarded, or dull normal, and who are potentially capable of achieving social and economic independence." [48]

Spencer has added:

"While the educational goal for the retarded child is essentially the same as for normal—the fullest possible development of the individual—it must be approached through somewhat different approaches and techniques." [49]

Hill wrote:

"About three-quarters of a million school-age children in the United States are mentally retarded with respect to their learning abilities. Most of them are capable of making considerable progress in the basic educational skills; a much smaller number have competence only for personal and social improvement; only a very small percentage require permanent custodial care.

"One of the most baffling problems met in establishing new programs for severely mentally retarded children concerns the employment of qualified teachers." [50]

H. R. 9591 by Mrs. Sullivan—The Exceptional Children Educational Assistance Act

EXTENSION OF REMARKS
OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 30, 1957

Mrs. SULLIVAN. Mr. Speaker, several days ago, in a special order during proceedings of the House, I outlined a bill which I was preparing to introduce before adjournment designed to stimulate and assist the training of urgently needed teachers for instructing so-called exceptional children—that is, the gifted and also those children with physical, mental, or emotional handicaps. I have today introduced the bill, and it is numbered H. R. 9591.

H. R. 9591, as its title states, is a bill to provide for the establishment of a special $18,500,000 7-year program of Federal scholarship and fellowship grants to individuals, and a $2,500,000 program of grants to public and nonprofit institutions of higher education, to encourage and expand the training of teachers for the education of exceptional children.

The preamble of the bill states:

The Congress believes that the American promise of equality of opportunity extends to every child within our country, no matter what his gifts, his capacity, or his handicaps, whether he is handicapped by defects of speech, of sight, or of hearing, or crippling disease or condition, whether his adjustment to society is made difficult by emotional or mental disorders, or whether, on the other hand, he is endowed with outstandingly brilliant gifts of mind and of spirit. All such exceptional children require special educational guidance for development of their total educational potential.

The Congress finds that the educational problems presented by such exceptional children are of national concern, and that there is an acute national shortage of, and urgent national need for, individuals professionally qualified to teach such children, to supervise the teachers of such children, to train such teachers and supervisors, and to conduct research into the problems relating to the education of exceptional children.

While the Congress recognizes that the primary responsibility for meeting these problems lies with the States and local communities, national interest in the training of self-reliant and useful citizens demands that the Federal Government assist and encourage and stimulate the initiation of adequate programs in the States to meet these problems.

Therefore, this act provides, on a temporary, 7-year basis, a program to further the training of teachers, supervisors of teachers, and researchers in special education for exceptional children, and to encourage and assist public and nonprofit institutions of higher education to expand their training work in these fields.

DEFINITION OF "EXCEPTIONAL CHILDREN"

Mr. Speaker, among the definitions carried in H. R. 9591, covering various phases of the program this bill would authorize, is the definition of the children it is specifically intended to help—"exceptional children"—as follows:

The term "exceptional children" means those children determined in accordance with regulations issued by the Commissioner (United States Commissioner of Education) to present special educational problems, such as (a) children who are unusually intelligent or gifted; (b) children who are mentally retarded; (c) children who are deaf or hard of hearing; (d) children who are blind or have serious visual impairments; (e) children who have serious health problems due to heart disease, epilepsy, or other debilitating conditions; (f) children who suffer from speech impediments; (g) children who are crippled (including those who have cerebral palsy); and (h) children who are maladjusted emotionally and socially, including the institutionalized delinquent.

Under the bill, Mr. Speaker, fellowships or scholarships would be authorized, with such stipends as the Commissioner should determine, totaling $500,000 for the remainder of this current fiscal year ending next June 30; $1,500,000 for the 1959 fiscal year; $2,500,000 for the 1960 fiscal year; and then $3,500,000 a year for fiscal years 1961, 1962, 1963 and 1964, when the temporary 7-year grant program would end. Thus, $18,500,000 would go to individuals for tuition, other scholastic expenses, living expenses and such other stipends as the Commissioner should provide. The idea, as I said in outlining the plan originally, is to make it worthwhile for experienced teachers to go back to college to take this advanced training, without feeling they were making a difficult financial sacrifice.

SECTION ON GRANTS

In addition to the grants to individuals, $2,500,000 would be authorized altogether—not a year, but over the 7 years—for grants to public and nonprofit institutions, making a total of $21 million for the entire program.

The language of this section of the bill on grants, section 5, is as follows:

GRANTS BY THE COMMISSIONER

SEC. 5. (a) The Commissioner is authorized to award scholarships and fellowships, with such stipends as he may determine, to individuals for the purpose of taking advanced training, at institutions selected by the recipients, for stated periods of time, in order to engage in employment as teachers of exceptional children, or to train or supervise teachers in this field, or engage in research in the teaching of exceptional children: *Provided*, That, in his discretion, the Commissioner, in order to accomplish the objectives of this act, may also make these awards for study at the undergraduate level.

(b) The Commissioner is also authorized to make grants to public and nonprofit institutions of higher education to construct, install, improve, or expand specialized facilities and equipment in connection with courses of instruction for persons preparing to engage in employment as teachers of exceptional children, or to train such teachers, or to supervise such teachers, or to engage in research in special education for exceptional children: *Provided*, That the Commissioner, in his discretion, may also make grants to establish specialized courses in this field in such institutions.

(c) The amount of scholarship and fellowship grants made in any fiscal year to residents of a State under section 5 (a) shall not exceed, in the aggregate, an amount which bears the same ratio to the total funds appropriated under authority of section 4 (a) for such fiscal year as the school-age population of such State bears to the total school-age population of all the States.

(d) Payments of grants pursuant to this act may be made by the Commissioner from time to time, on such conditions as the Commissioner may determine, including conditions requiring public and other nonprofit institutions to make such reports, in such form, and containing such information as the Commissioner may from time to time reasonably require to carry out his functions under this act, and conditions requiring compliance with such provisions as the Commissioner may from time to time find necessary

to assure the correctness and verification of such reports.

(e) The Commissioner shall consult with an advisory committee as described in section 6 (a) which shall assist him in determining the areas and priorities of need in the award of these grants, and in setting the standards for the granting of such fellowships, scholarships, and grants.

TEXT OF BILL

Mr. Speaker, the full text of H. R. 9591 is as follows:

[85th Cong., 1st sess., in the House of Representatives, August 30, 1957, Mrs. SULLIVAN introduced the following bill; which was referred to the Committee on Education and Labor]

H. R. 9591

A bill to provide for the establishment of a special $18,500,000 7-year program of Federal scholarship and fellowship grants to individuals, and a $2,500,000 program of grants to public and nonprofit institutions of higher education, to encourage and expand the training of teachers for the education of exceptional children

Be it enacted, etc.—

SHORT TITLE

This act may be cited as the "Exceptional Children Educational Assistance Act."

FINDINGS AND PURPOSE OF ACT

SEC. 2. The Congress believes that the American promise of equality of opportunity extends to every child within our country, no matter what his gifts, his capacity or his handicaps, whether he is handicapped by defects of speech, of sight or of hearing, or crippling disease or condition, whether his adjustment to society is made difficult by emotional or mental disorders, or whether, on the other hand, he is endowed with outstandingly brilliant gifts of mind and of spirit. All such exceptional children require special educational guidance for development of their total educational potential.

The Congress finds that the educational problems presented by such exceptional children are of national concern, and that there is an acute national shortage of, and urgent national need for, individuals professionally qualified to teach such children, to supervise the teachers of such children, to train such teachers and supervisors, and to conduct research into the problems relating to the education of exceptional children.

While the Congress recognizes that the primary responsibility for meeting these problems lies with the States and local communities, national interest in the training of self-reliant and useful citizens demands that the Federal Government assist and encourage and stimulate the initiation of adequate programs in the States to meet these problems.

Therefore, this act provides, on a temporary, 7-year basis, a program to further the training of teachers, supervisors of teachers, and researchers in special education for exceptional children, and to encourage and assist public and nonprofit institutions of higher education to expand their training work in these fields.

DEFINITIONS

SEC. 3. As used in this act—

(1) The term "State" means a State, Alaska, Hawaii, the District of Columbia, and the Commonwealth of Puerto Rico;

(2) The term "Commissioner" means the United States Commissioner of Education;

(3) The term "school-age population" means that part of the population which is between the ages of 5 and 17, both inclusive, determined by the Commissioner on the basis of the population between such ages for the most recent year for which satisfactory data are available from the Department of Commerce;

(4) The term "State educational agency" means the State board of education or other agency or officer primarily responsible for the State supervision of public elementary and secondary schools in a State, or, if there is no such agency or officer, an agency or officer designated by the governor or by State law;

(5) The term "nonprofit institution" means an institution owned and operated by one or more corporations or associations no part of the net earnings of which inures, or may lawfully inure, to the benefit of any private shareholder or individual; and

(6) The term "exceptional children" means those children determined in accordance with regulations issued by the Commissioner to present special educational problems, such as (a) children who are unusually intelligent or gifted; (b) children who are mentally retarded; (c) children who are deaf or hard of hearing; (d) children who are blind or have serious visual impairments; (e) children who have serious health problems due to heart disease, epilepsy, or other debilitating conditions; (f) children who suffer from speech impediments; (g) children who are crippled (including those who have cerebral palsy); and (h) children who are maladjusted emotionally and socially, including the institutionalized delinquent.

AUTHORIZATION OF APPROPRIATIONS

SEC. 4. (a) There are hereby authorized to be appropriated $500,000 for the fiscal year ending June 30, 1958; $1,500,000 for the fiscal year ending June 30, 1959; $2,500,000 for the fiscal year ending June 30, 1960; $3,500,000 for the fiscal year ending June 30, 1961; $3,500,000 for the fiscal year ending June 30, 1962; $3,500,000 for the fiscal year ending June 30, 1963; and $3,500,000 for the fiscal year ending June 30, 1964; for grants to individuals for scholarships and fellowships in accordance with the provisions of section 5 (a) of this act.

(b) There is also authorized the sum of $2,500,000 to be expended during the existence of this program in the form of grants to public and nonprofit institutions in accordance with the provisions of section 5 (b) of this act.

GRANTS BY THE COMMISSIONER

SEC. 5. (a) The Commissioner is authorized to award scholarships and fellowships, with such stipends as he may determine, to individuals for the purpose of taking advanced training at institutions selected by the recipients, for stated periods of time, in order to engage in employment as teachers of exceptional children, or to train or supervise teachers in this field, or engage in research in the teaching of exceptional children: *Provided*, That, in his discretion, the Commissioner, in order to accomplish the objectives of this act, may also make these awards for study at the undergraduate level.

(b) The Commissioner is also authorized to make grants to public and nonprofit institutions of higher education to construct, install, improve, or expand specialized facilities and equipment in connection with courses of instruction for persons preparing to engage in employment as teachers of exceptional children, or to train such teachers, or to supervise such teachers, or to engage in research in special education for exceptional children: *Provided*, That the Commissioner, in his discretion, may also make grants to establish specialized courses in this field in such institutions.

(c) The amount of scholarship and fellowship grants made in any fiscal year to residents of a State under section 5 (a) shall not exceed, in the aggregate, an amount which bears the same ratio to the total funds appropriated under authority of section 4 (a) for such fiscal year as the school age population of such State bears to the total school age population of all the States.

(d) Payments of grants pursuant to this act may be made by the Commissioner from time to time, on such conditions as the Commissioner may determine, including conditions requiring public and other nonprofit institutions to make such reports, in such form, and containing such information as the Commissioner may from time to time reasonably require to carry out his functions under this act, and conditions requiring compliance with such provisions as the Commissioner may from time to time find necessary to assure the correctness and verification of such reports.

(e) The Commissioner shall consult with an advisory committee as described in section 6 (a) which shall assist him in determining the areas and priorities of need in the award of these grants, and in setting the standards for the granting of such fellowships, scholarships, and grants.

ADVISORY COMMITTEE AND ADVISORY PANELS

SEC. 6. (a) The Commissioner shall appoint an advisory committee of not more than eight persons who shall be conversant with the overall educational needs of exceptional children and who shall assist the Commissioner in developing general policies under this act. The Commissioner shall be ex officio a member of this committee and shall act as chairman thereof.

(b) The Commissioner is also authorized from time to time to establish advisory panels of specialists in special education for any of the categories of exceptional children enumerated in this act. Each such panel shall consist of not less than five persons, who shall meet at the call of the Commissioner.

DELEGATION OF FUNCTIONS

SEC. 7. The Commissioner may delegate to any officer or employee of the Office of Education any of his functions under this act except the making of regulations.

PUBLICIZING AVAILABILITY OF GRANTS

SEC. 8. The Commissioner shall take such steps as are practicable to publicize to the fullest extent possible the availability of fellowships, scholarships, and grants under this act among teachers and prospective teachers, and among all colleges and universities offering accedited courses of study leading to advanced degrees in nursery, kindergarten, elementary, or secondary education.

COOPERATION WITH STATES

SEC. 9. In the administration of this act, the Commissioner shall consult and advise with the various State educational agencies to determine the extent of need for teachers of exceptional children in the respective States and to keep the State educational agencies fully informed of all developments under this program in order to encourage them to establish special programs or special classes for exceptional children. In this connection, the Commissioner shall advise the State educational agencies of the names and home addresses of all individuals from their respective States who have received fellowships, scholarships, or grants for training in the field of education of exceptional children, and the particular field of study each is pursuing, so that the respective State educational agencies can then take appropriate steps to seek to attract such persons to positions in their home States in order to utilize the advanced education and skills which they have acquired under this program: *Provided*, That no individual receiving a scholarship, fellowship, or grant for advanced study under this act shall be required, as a condition of such scholarship or fellowship or grant, to promise to take employment subsequently in any State.

PROCEEDINGS OF THE SENATE SUBSEQUENT TO SINE DIE ADJOURNMENT

CERTIFICATE OF ELECTION

The following certificate of election was received by the Secretary of the Senate on September 6, 1957:

UNITED STATES OF AMERICA,
THE STATE OF WISCONSIN,
EXECUTIVE DEPARTMENT.

To the PRESIDENT OF THE SENATE OF THE UNITED STATES:

This is to certify that on the 27th day of August 1957 WILLIAM PROXMIRE was duly chosen by the qualified electors of the State of Wisconsin a Senator from said State to represent said State in the Senate of the United States for the residue of the unexpired term of 6 years, ending on the 3d day of January A. D. 1959.

In testimony whereof, I have hereunto set my hand and caused the great seal of the State of Wisconsin to be affixed. Done at the capitol, in the city of Madison, this 5th day of September, in the year of our Lord 1957.

[SEAL] VERNON W. THOMSON,
Governor.

By the Governor:
ROBERT C. ZIMMERMAN,
Secretary of State.

REPORTS OF COMMITTEES

REPORT ENTITLED "TEXTILE PROCUREMENT IN THE MILITARY SERVICES" (S. REPT. NO. 1166)
